Front passenger airbag warning

▲ WARNING AVERTISSEMENT (E1)

DEATH or SERIOUS INJURY can occur: - Children 12 and under can be killed by the air bag - The BACK SEAT is the SAFEST place for children - NEVER put a reard-racing child seat in the front unless air bag is of - Sit as far hack as possible from the air bag - ALWAYS use SEAT BELTS and CHILD RESTRAINTS

Risque de BLESSUBE GRAVE ou MORTELLE - Les oriants âgés de 12 ans et moins paysent âtre toids par la coussignentable 1-se antains sont en plarg grande SECURTE seu BECER ARRIÈRE - NE JAMAS placer un porte-bébé orienté vers l'arrière sur le siège avant à moins que le fonctionnement du coussin gonflable soit annulé - S'asseoir aussi foin que possible du coussin gonflable - 100UORS bourte les CENTURES DU SIÉCE de IDSPORTIS De SECURTE POUR ENANTS - 100UORS bourte les CENTURES DU SIÉCE de IDSPORTIS DE SECURTE POUR ENANTS -

Airbag warning sticker for USA and Canada

WARNING Risk of injury or death if the codriver airbag is enabled

If the co-driver airbag is enabled, a child on the co-driver seat may be struck by the codriver airbag during an accident.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

Observe the chapter "Children in the vehicle".

Vehicle manufacturer

Mercedes-Benz AG Mercedesstraße 120 70372 Stuttgart Germany

As at 07.04.21

Thank you for buying Mercedes-Benz

Before you first drive off, read this operator's manual carefully and familiarize yourself with your vehicle. For your own safety and a longer operating lifespan of the vehicle, follow the instructions and warning notices in this operator's manual. Disregarding them may lead to damage to the vehicle or injury to people.

Damage to the vehicle resulting from the disregard of the instructions is not covered by the Mercedes-Benz Limited Warranty.

The standard equipment and product description of your vehicle may vary and depends on the following factors:

- Model
- Order
- National version
- Availability

Your vehicle may therefore differ, in individual cases, from that shown in the descriptions and illustrations.

Mercedes-Benz reserves the right to introduce changes in the following areas:

- Design
- Equipment
- Technical features

The following documents are integral parts of the vehicle:

- Digital Operator's Manual
- · Printed operator's manual
- Maintenance Booklet
- Equipment-dependent supplements
- Supplementary documents

Keep these documents in the vehicle at all times. Ensure that all documents are in the vehicle or passed on in the event of sale or rental. Mercedes-Benz USA, LLC Mercedes-Benz Canada, Inc. A Daimler Company

In this Operator's Manual, you will find the following symbols:

WARNING Danger due to not observing the warning notices

Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

- Observe the warning notices.
- ENVIRONMENTAL NOTE Environmental damage due to failure to observe environmental notes

Environmental notes include information on environmentally responsible behavior or environmentally responsible disposal.

- Observe environmental notes.
- **I** NOTE Damage to property due to failure to observe notes on material damage

Notes on material damage inform you of risks which may lead to your vehicle being damaged.

Observe notes on material damage.

- (i) These symbols indicate useful instructions or further information that could be helpful to you.

Protecting the environment

ENVIRONMENTAL NOTE Environmental damage due to operating conditions and personal driving style

Operate your vehicle in an environmentally responsible manner to help protect the environment. Please observe the following recommendations on operating conditions and personal driving style.

Operating conditions:

- Make sure that the tire pressure is correct.
- Do not carry any unnecessary weight (e.g. roof luggage racks once you no longer need them).
- Monitor the energy consumption.
- Adhere to the service intervals.
 A regularly serviced vehicle will contribute to environmental protection.
- Always have maintenance work carried out at a qualified specialist workshop.

Personal driving style:

- Drive carefully and maintain a suitable distance from the vehicle in front.
- Avoid frequent, sudden acceleration and braking.
- Drive in a style which saves energy.
 Observe the ECO display for an economical driving style.

ENVIRONMENTAL NOTE Environmental pollution caused by irresponsible disposal of the high-voltage battery

A high-voltage battery contains materials which are harmful to the environment.

Dispose of defective high-voltage batteries at a qualified specialist workshop.

Environmental issues and recommendations

It is recommended that you re-use or recycle materials instead of just disposing of them.

The relevant environmental guidelines and regulations serve to protect the environment and must be strictly observed.

Genuine Mercedes-Benz parts

ENVIRONMENTAL NOTE Environmental damage due to not using recycled reconditioned components

Mercedes-Benz AG offers recycled reconditioned components and parts with the same quality as new parts. The same entitlement from the Limited Warranty is valid as for new parts.

- Use recycled reconditioned components and parts from Mercedes-Benz AG.
- NOTE Impairment of the operating efficiency of the restraint systems from installing accessory parts or from repairs or welding

Airbags and Emergency Tensioning Devices, as well as control units and sensors for the restraint systems, may be installed in the following areas of your vehicle:

• Doors

24 General notes

- Door pillars
- Door sills
- Seats
- Cockpit
- · Instrument cluster
- Center console
- Lateral roof frame
- Do not install accessory parts such as audio systems in these areas.
- Do not carry out repairs or welding.
- Have accessory parts retrofitted at a qualified specialist workshop.

You could jeopardize the operating safety of your vehicle if you use parts, tires and wheels as well as accessories relevant to safety which have not been approved by Mercedes-Benz. Safety-relevant systems, e.g. the brake system, may malfunction. Only use genuine Mercedes-Benz parts or parts of equal quality. Only use tires, wheels and accessory parts that have been specifically approved for your vehicle model. Genuine Mercedes-Benz parts are subject to strict quality inspections. Each part has been specially developed, manufactured or selected for Mercedes-Benz vehicles and adapted to them. Therefore, only genuine Mercedes-Benz parts should be used.

More than 300,000 different genuine Mercedes-Benz parts are available for Mercedes-Benz models.

All authorized Mercedes-Benz Centers maintain a supply of genuine Mercedes-Benz parts for necessary service and repair work. In addition, strategically located parts delivery centers provide for quick and reliable parts service.

Always specify the vehicle identification number (VIN) (\rightarrow page 345) when ordering genuine Mercedes-Benz parts.

Operator's Manual

This Operator's Manual and the Digital Operator's Manual in the vehicle describe the following models and the standard and special equipment for your vehicle:

- The models and the standard and special equipment available at the time of this Operator's Manual going to press.
- The models and the standard and special equipment only available in certain countries.
- The models and the standard and special equipment, which will only be available at a later date.

Note that your vehicle may not be equipped with all features described. This is also the case for systems relevant to safety. Therefore, the equipment on your vehicle may differ from that in the descriptions and illustrations.

The original purchase agreement for your vehicle contains a list of the equipment in your vehicle at the time of delivery. Should you have any questions concerning equipment and operation, please consult an authorized Mercedes-Benz Center.

The Operator's Manual, Supplement, further supplementary documents and Maintenance Booklet are important documents and should be kept in the vehicle.

Mercedes me app

Notes about the on-demand feature

You can also activate various functions (ondemand feature) subsequently via Mercedes me after purchasing your vehicle.

Information is available at any authorized Mercedes-Benz Center.

Activating on-demand feature using Mercedes me

Requirements:

- The vehicle has GPS reception.
- The vehicle is linked to the Mercedes me user account.

Ordering and activating on-demand feature

- Add the desired on-demand feature for the vehicle to the shopping basket in the Mercedes me Store.
 - Complete the order. The on-demand feature is activated when operating the vehicle.

Speeding up activation

- Switch the vehicle off and lock it.
- After about 2 minutes, unlock the vehicle and switch on the vehicle.
- The on-demand feature has been activated. For some features, a notification also appears in the vehicle's multimedia system.

If the activation was not successful, repeat the process.

Service and vehicle operation

Vehicle operation outside the USA or Canada

When you are abroad with your vehicle, observe the following points:

• Service points or replacement parts may not be available immediately.

Some Mercedes-Benz models are available in Europe through our European Delivery Program. For more information, please consult an authorized Mercedes-Benz Center, or write to one of the following addresses:

In the USA:

Mercedes-Benz USA, LLC European Delivery Department

One Mercedes-Benz Drive

Sandy Springs, GA 30328

In Canada:

Mercedes-Benz Canada, Inc. European Delivery Department 98 Vanderhoof Avenue Toronto, Ontario M4G 4C9

Maintenance

Your customer advisor confirms the service in the service report.

Roadside Assistance

The Mercedes-Benz Roadside Assistance Program offers technical help in the case of a breakdown. Your calls to the toll-free Roadside Assistance Hotline are answered by our agents 24 hours a day, 365 days a year.

1-800-FOR-MERCedes (1-800-367-6372) (USA) 1-800-387-0100 (Canada)

You can find further information in the Mercedes-Benz Roadside Assistance Program brochure (USA) or the "Roadside Assistance" section in the Service and Warranty booklet (Canada). You will find both in the vehicle document wallet.

Change of address or change of ownership

In the event of a change of address, please send us the "Notification of address change" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) on the hotline number 1-800-FOR-MERCedes (1-800-367-6372) or Customer Service (Canada) on 1-800-387-0100. We can then reach you in a timely fashion, if necessary.

If you sell your Mercedes, please leave all literature in the vehicle so that it is available to the next owner. If you have purchased a used vehicle, please send us the "Notice of Purchase of Used Car" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) at the hotline number 1-800-FOR-MERCedes (1-800-367-6372) or Customer Service (Canada) at 1-800-387-0100.

Possible danger due to substances hazardous to health

In compliance with Proposition 65 ("Prop65"), the following detachable label has been added to each vehicle sold in California:

WARNING

Operating, servicing and maintaining a passenger vehicle, pickup truck, van or off-road motor vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warings.ca.gov/passenger-vehicle

EII

Operating safety

A

 WARNING Risk of accident due to malfunctions or system failures

To avoid malfunctions or system failures:

Always have the prescribed service and maintenance work as well any required repairs carried out at a qualified specialist workshop.

General notes 27

 WARNING Risk of accident or injury due to incorrect modifications on electronic component parts

Modification of electronic components, their software or wiring could impair their function and/or the function of other networked component parts or safety-relevant systems.

This can endanger the operating safety of the vehicle.

- Never tamper with the wiring and electronic component parts or their software.
- You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

Observe the "On-board electronics" section in "Technical data".

NOTE Damage to the vehicle caused by driving too fast and by blows to the underbody and chassis parts

The vehicle can be damaged in the following cases in particular:

- The underside of the vehicle makes contact with the ground, e.g. on a high curb or an unpaved road.
- The vehicle drives too quickly over an obstacle, e.g. a curb, a speed bump or a pothole.
- A heavy object hits the underbody or chassis components.

In these or similar situations, the vehicle body, the underbody, chassis components, wheels or tires and parts of the high-voltage battery could be damaged even if this is not visible. Components that have been damaged in this way can fail unexpectedly or, in the event of an accident, may not absorb the loads that arise as intended. Have the vehicle checked and repaired immediately at a qualified specialist workshop.

or

If driving safety is impaired during the rest of the journey, stop immediately paying attention to the traffic situation and notify a qualified specialist workshop.

Electric vehicles have an electric motor. The electric motor's energy supply is provided by the highvoltage on-board electrical system.

▲ DANGER Risk of death and fire due to modified and/or damaged components of the high-voltage on-board electrical system

The vehicle's high-voltage on-board electrical system is under high voltage. If you modify component parts in the vehicle's high-voltage on-board electrical system or touch damaged component parts, you may be electrocuted. In addition, modified and/or damaged components may cause a fire.

In the event of an accident or impact to the vehicle underbody, components of the highvoltage electrical system may be damaged although the damage is not visible.

- Never make any modifications to the high-voltage on-board electrical system.
- Do not switch on or use the vehicle if its high-voltage on-board electrical system components have been modified or damaged.
- Never touch damaged components of the high-voltage on-board electrical system.
- After an accident, do not touch any components of the high-voltage on-board electrical system.
- After an accident, have the vehicle transported away.
- Have the components of the high-voltage on-board electrical system checked at a

qualified specialist workshop and replaced if necessary.

The components of the high-voltage on-board electrical system are marked with yellow warning stickers. The cables of the high-voltage on-board electrical system are orange.

Vehicles with an electric motor generate significantly less vehicle noise emissions than vehicles with combustion engines. As a result, your vehicle may not be heard by other road users in certain situations. This can occur, for example, when you are parking and your vehicle cannot be seen by other road users. This requires you to adopt a particularly anticipatory driving style, as it is necessary to allow for the possibility that other road users may behave unpredictably.

Declaration of conformity for vehicle installed radio components

USA: "Radio based devices of this vehicle comply with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) These devices may not cause harmful interference, and 2) These devices must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment."

Canada: "This vehicle contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s). Operation is subject to the following two conditions: (1) These devices

may not cause interference. (2) These devices must accept any interference, including interference that may cause undesired operation of the devices." "Les émetteurs/récepteurs dans cette véhicule sont conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : 1) Ces appareils ne doivent pas produire de brouillage; 2) Ces appareils doivent accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement."

Diagnostics connection

The diagnostics connection is a technical interface in the vehicle. It is used, for example, in the context of repair and maintenance work or for reading out vehicle data at a specialist workshop. Diagnostic devices should therefore only be connected at a qualified specialist workshop. ▲ WARNING Risk of accident due to connecting devices to the diagnostics connection

If you connect devices to the diagnostics connection of the vehicle, the function of vehicle systems and operating safety may be impaired.

- For safety reasons, we recommend that you only use and connect products approved by your authorized Mercedes-Benz Center.
- **WARNING** Risk of accident due to objects in the driver's footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal.

This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- Always install the floor mats securely and as prescribed in order to ensure that

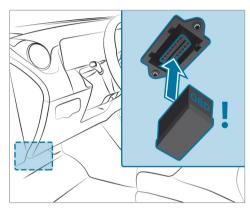

there is always sufficient room for the pedals.

- Do not use loose floor mats and do not place floor mats on top of one another.
- NOTE Battery discharging from using devices connected to the diagnostics connection

Using devices at the diagnostics connection drains the battery.

- Check the charge level of the battery.
- If the charge level is low, charge the battery, e.g. by driving a considerable distance.

30 General notes

Connecting and using another device with the diagnostics connection can have the following effects:

- · Malfunctions in the vehicle system
- · Permanent damage to vehicle components

Please refer to the warranty terms and conditions for this matter.

Qualified specialist workshop

An authorized Mercedes-Benz Center is a qualified specialist workshop. It has the necessary special skills, tools and qualifications to correctly carry out the work required on your vehicle. This particularly applies to safety-relevant works.

For the following, always have your vehicle checked at an authorized Mercedes-Benz Center:

- · Safety-relevant works
- Service and maintenance work
- Repair work
- Modifications as well as installations and conversions
- Work on electronic components

Mercedes-Benz recommends a Mercedes-Benz service center.

Correct use of the vehicle

If you remove any warning stickers, you or others could fail to recognize certain dangers. Leave warning stickers in position. Observe the following information in particular when driving your vehicle:

- The safety notes in this Operator's Manual, vehicle-specific supplements and further supplementary documents
- Technical data for the vehicle
- Traffic rules and regulations
- Laws and safety standards pertaining to motor vehicles

Sport Utility Vehicle

WARNING Risk of accident when the center of gravity is too high

The vehicle may start to skid and rollover in the event of sudden steering maneuvers and/or when the vehicle's speed is not adapted to the road conditions.

Always adapt your speed and driving style to the vehicle's driving characteristics and to the prevailing road and weather conditions. Utility vehicles have a significantly higher rollover rate than other types of vehicles.

If this type of vehicle is not driven safely, an accident can occur, the vehicle can roll over and occupants can suffer serious or even fatal injuries.

In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a seat belt.

You and all vehicle occupants should always wear your seat belts.

Notes for persons with electronic medical aids

Mercedes-Benz AG cannot, despite carefully developing vehicle systems, completely rule out the interaction of vehicle systems with electronic medical aids such as cardiac pacemakers.

In addition, there are components installed in the vehicle that, regardless of the operating status of the vehicle, can generate magnetic fields on a par with permanent magnets. These fields can be found, for example, in the area around the multimedia and sound system or also in the area of the seats, depending on the vehicle equipment.

For this reason, the following can occur in isolated cases, depending on the aids used:

- Medical aids malfunctioning
- Adverse health effects

Observe the notes and warnings of the manufacturer of the medical aids; if in doubt, contact the device manufacturer and/or your doctor. If there is continuing uncertainty concerning the possibility of medical aids malfunctioning, Mercedes-Benz AG recommends using only few electrical vehicle systems and/or maintaining a distance from the components.

When charging the high-voltage battery, keep a distance of at least an arm's length between the medical aid and the following components:

• The power supply equipment

This includes charging stations in the form of a wallbox or a public charging point, for example.

• Vehicle components carrying live voltage

This includes the charging cable and the charging control box, for example.

Only have repairs and maintenance work in the area of the following components carried out at a qualified specialist workshop:

- Vehicle components carrying live voltage
- Transmission antenna
- Multimedia system and sound system

If you have any queries or suggestions, consult a qualified specialist workshop.

Problems with your vehicle

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to contact an authorized Mercedes-Benz Center immediately to have the problem diagnosed and rectified. If the problem is not resolved to your satisfaction, please discuss the problem again with an authorized Mercedes-Benz Center or, if necessary, contact us at one of the following addresses:

In the USA:

Mercedes-Benz USA, LLC Customer Assistance Center One Mercedes-Benz Drive Sandy Springs, GA 30328

In Canada:

Mercedes-Benz Canada, Inc. Customer Relations Department 98 Vanderhoof Avenue Toronto, Ontario M4G 4C9

Reporting safety defects

USA only:

The following text is published as required of manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to the https:// www.safercar.gov/; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590,: USA.

You can also obtain other information about motor vehicle safety from: https://www.safercar.gov

Canada only:

The following text is published as required of manufacturers under subsection 18.4 (4) of the Motor Vehicle Safety Regulations.

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform Transport Canada in addition to notifying Mercedes-Benz Canada Inc. If Transport Canada received similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, Transport Canada cannot become involved in individual problems between you, your dealer or Mercedes-Benz Canada Inc.

To contact Transport Canada, you may call the Defect Investigations and Recalls Division toll-free in Canada at 1-800-333-0510 or 819-994-3328in the Gatineau-Ottawa area or internationally; you may also go to the following websites for more information:

- English: https://www.tc.gc.ca/recalls
- French: https://www.tc.gc.ca/rappels

Limited Warranty

NOTE Damage to the vehicle arising from violation of these operating instructions.

Damage to the vehicle can arise from violation of these operating instructions.

This damage is not covered either by the Mercedes-Benz implied warranty or by the New- or Used-Vehicle Warranty.

Follow the instructions in these operating instructions on proper operation of your vehicle as well as on possible vehicle damage.

QR code for rescue card

QR codes are attached in the socket flap and on the opposite side on the B-pillar. In the event of an accident, rescue services can use the QR code to quickly find the appropriate rescue card for your vehicle. The current rescue card contains the most important information about your vehicle in a compact form, e.g. the routing of the electric lines.

Further information can be obtained at https://www.mercedes-benz.de/qr-code

Data storage

Data processing in the vehicle

Electronic control units

Electronic control units are installed in your vehicle. Control units process data which, for example, they receive from vehicle sensors, generate themselves or exchange between themselves. Some control units are required for the safe operation of your vehicle, some assist you when driving, such as driver assistance systems, while others enable convenience or infotainment functions.

The following provides you with general information regarding data processing in the vehicle. Additional information regarding exactly which data in your vehicle are collected, saved and transmitted to third parties, and for what purpose, can be found in the information directly related to the functional characteristics in question in their respective Operator's Manual. This information is also available online and, depending on the vehicle equipment, digitally.

Personal data

Every vehicle is identified by a unique vehicle identification number. Depending on the country, this vehicle identification number can be used by, for example, governmental authorities to determine the identity of the owner. There are other possibilities to use data collected from the vehicle to identify the owner or driver, such as the license plate number.

Therefore, data generated or processed by control units may be attributable to a person or, under certain conditions, become attributable to a person. Depending on which vehicle data are available, it may be possible to make inferences about, for example, your driving behavior, your location, your route or your use patterns.

Legal requirements regarding the disclosure of data

If legally required to do so, manufacturers are, in individual cases, legally obliged to provide governmental entities, upon request and to the extent required, data stored by the manufacturer. For example, this may be the case during the investigation of a criminal offense.

34 General notes

Governmental entities are themselves, in individual cases and within the applicable legal framework, authorized to read out data from the vehicle. In the case of an accident, information that can help with an investigation can, therefore, be taken from the airbag control unit, for example.

Operational data in the vehicle

This is data regarding the operation of the vehicle, which have been processed by control units.

This includes the following data, for example:

- Vehicle status information such as the speed, longitudinal acceleration, lateral acceleration, number of wheel revolutions or the fastened seat belts display
- Ambient conditions, such as temperature, rain sensor or distance sensor

Generally, the use of these data is temporary; they will not be stored beyond the period of operation and will only be processed within the vehicle itself. Control units often contain data memories for vehicle keys, for example. Their use permits the temporary or permanent documentation of technical information about the vehicle's operating state, component loads, maintenance requirements and technical events or malfunctions.

Depending on the vehicle equipment, the following data are stored:

- Operating status of system components, such as fill levels, tire pressure or battery status
- Malfunctions or faults in important system components, such as lights or brakes
- System reactions in special driving situations, such as airbag deployment or the intervention of stability control systems
- Information on events leading to vehicle damage
- Condition of charge of the high-voltage battery, estimated range

In certain cases, it may be required to store data that would have otherwise been used only temporarily. This may be the case if the vehicle has detected a malfunction, for example.

If you use services, such as repair services and maintenance work, stored operational data as well as the vehicle identification number can be read out and used. They can be read out by service network employees, such as workshops and manufacturers or third parties, such as breakdown services. The same is true in the case of warranty claims and quality assurance measures.

In general, the readout is performed via the legally prescribed port for the diagnostics connection in the vehicle. The operational data that are read out document technical states of the vehicle or of individual components and assist in the diagnosis of malfunctions, compliance with warranty obligations and quality improvement. To that end, these data, in particular information about component loads, technical events, malfunctions and other faults may be transmitted along with the vehicle identification number to the manufacturer. Furthermore, the manufacturer is subject to product liability. For this reason the manufacturer also uses operational data from the vehicle, for example, for recalls. These data can also be used to examine the customer's warranty and guarantee claims.

Fault memories in the vehicle can be reset by a service outlet or at your request as part of repair or maintenance work.

Convenience and infotainment functions

You can store convenience settings and individual settings in the vehicle and change or reset them at any time.

Depending on the vehicle equipment, this includes the following settings, for example:

- · Seat and steering wheel positions
- Suspension and climate control settings
- Individual settings, such as interior lighting

Depending on the selected equipment, you can import data into vehicle infotainment functions yourself.

Depending on the vehicle equipment, this includes the following data, for example:

- Multimedia data, such as music, films or photos for playback in an integrated multimedia system
- Address book data for use in connection with an integrated hands-free system or an integrated navigation system
- Entered navigation destinations
- Data about the use of Internet services

These data for convenience and infotainment functions may be saved locally in the vehicle or they may be located on a device which you have connected to the vehicle, such as a smartphone, USB flash drive or MP3 player. If you have entered these data yourself, you can delete them at any time.

This data is transmitted from the vehicle to third parties only at your request. This applies, in particular, when you use online services in accordance with the settings that you have selected.

Smartphone integration (e.g. Android Auto or Apple CarPlay®)

If your vehicle is accordingly equipped, you can connect your smartphone or another mobile end device to the vehicle. You can then control them by means of the control elements integrated in the vehicle. Images and audio from the smartphone can be output via the multimedia system. Certain information is simultaneously transferred to your smartphone. Depending on the type and integration, this includes position data, day/night mode and other general vehicle statuses. For more information please consult the Operator's Manual of the vehicle/infotainment system. This integration allows the use of selected smartphone apps, such as navigation or music player apps. There is no further interaction between the smartphone and the vehicle; in particular, vehicle data is not directly accessible. The type of additional data processing is determined by the provider of the app being used. Which settings you can make, if any, depends on the specific app and the operating system of your smartphone.

Online services

Wireless network connection

If your vehicle has a wireless network connection, it enables data to be exchanged between your vehicle and additional systems. The wireless network connection is made possible by the vehicle's own transmitter and receiver or by a mobile end device that you have brought into the vehicle, for example, a smartphone. Online functions can be used via the wireless network connection. This includes online services and applications/apps provided to you by the manufacturer or by other providers.

Manufacturer's services

Regarding the manufacturer's online services, the individual functions are described by the manufacturer in a suitable place, for example, in the Operator's Manual or on the manufacturer's website, where the relevant data protection information is also given. Personal data may be used for the provision of online services. Data are exchanged via a secure connection, such as the manufacturer's designated IT systems. Any personal data which are collected, processed and used, other than for the provision of services, is done so exclusively on the basis of legal permission. This is the case, for example, for a legally prescribed emergency call system, a contractual agreement or when consent has been given.

You can have services and functions, some of which are subject to a fee, activated or deactivated. This excludes legally prescribed functions and services, such as an emergency call system.

Third party services

If you use online services from other providers (third parties), these services are the responsibility of the provider in question and subject to that provider's data protection conditions and terms of use. As a general rule, the manufacturer has no influence on the content exchanged.

For this reason, when services are provided by third parties, please ask the service provider in question for information about the type, extent and purpose of the collection and use of personal data.

Data protection rights

Depending on your country or the equipment and range of functions of your vehicle as well as the services you use and the services on offer, you are entitled to different data protection rights. Further information on data protection and your data protection rights can either be found on the manufacturer's website or you will receive this information as part of the various services and service offers. There you will also find the contact information for the manufacturer and its data protection officers.

At a workshop, for example, with the support of a specialist and possibly for a fee, you can have data read out which is stored only locally in the vehicle.

MBUX multimedia system/Mercedes me connect

If the vehicle is equipped with the MBUX multimedia system or Mercedes me connect, additional data about the vehicle's operation, the use of the vehicle in certain situations, and the location of the vehicle may be compiled by the MBUX multimedia system or Mercedes me connect.

For additional information, please refer to the "MBUX multimedia system" section and/or the Mercedes me connect Terms and Conditions.

Event data recorders

USA only:

This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an airbag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating
- Whether or not the driver and front passenger seat belts were buckled/fastened
- How far (if at all) the driver was depressing the accelerator and/or brake pedal and
- · How fast the vehicle was traveling

This data can help provide a better understanding of the circumstances in which accidents and injuries occur. NOTE: EDR data is recorded by your vehicle only if a non-trivial crash situation occurs; no data is recorded by the EDR under normal driving conditions and no personal data (e.g. name, gender, age and accident location) is recorded. However, other parties, such as law enforcement, could combine EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties that have the special equipment, such as law enforcement, can read the information by accessing the vehicle or the EDR.

EDR data may be used in civil and criminal matters as a tool in accident reconstruction, accident claims and vehicle safety. Since the Crash Data Retrieval (CDR) tool that is used to extract data from the EDR is commercially available, Mercedes-Benz USA, LLC ("MBUSA") expressly disclaims any and all liability arising from the extraction of this information by unauthorized Mercedes-Benz personnel.

MBUSA will not share EDR data with others without the consent of the vehicle owner or, if the vehicle is leased, without the consent of the lessee. Exceptions to this representation include responses to subpoenas by law enforcement; by federal, state or local government; in connection with or arising out of litigation involving MBUSA or its subsidiaries and affiliates; or, as required by law.

Warning: The EDR is a component of the Restraint System Module. Tampering with, altering, modifying or removing the EDR component may result in a malfunction of the Restraint System Module and other systems. State laws or regulations regarding EDRs that conflict with federal regulation are pre-empted. This means that in the event of such conflict, the federal regulation governs. As of December 2016, 17 states have enacted laws relating to EDRs.

Restraint system

Protection provided by the restraint system

The restraint system includes the following components:

- · Seat belt system
- Airbags
- · Child restraint system
- · Child seat securing systems

The restraint system can help prevent the vehicle occupants from coming into contact with parts of the vehicle interior in the event of an accident. In the event of an accident, the restraint system can also reduce the forces to which the vehicle occupants are subjected.

A seat belt can only provide the best level of protection if it is worn correctly. Depending on the detected accident situation, Emergency Tensioning Devices and/or airbags supplement the protection offered by a correctly worn seat belt. Emergency Tensioning Devices and/or airbags are not deployed in every accident. In order for the restraint system to provide the intended level of protection, each vehicle occupant must observe the following information:

- Fasten seat belts correctly.
- Sit in an almost upright seat position with their back against the seat backrest.
- Sit with their feet resting on the floor, if possible.
- Always secure persons under 5 ft (1.50 m) tall in an additional restraint system suitable for Mercedes-Benz vehicles.

However, no system available today can completely eliminate injuries and fatalities in every accident situation. In particular, the seat belt and airbag generally do not protect against objects penetrating the vehicle from the outside. It is also not possible to completely rule out the risk of injury caused by the airbag deploying.

Limitations of the protection provided by the restraint system

 WARNING Risk of injury or death due to modifications to the restraint system

Vehicle occupants may no longer be protected as intended if alterations are made to the restraint system.

- Never alter the parts of the restraint system.
- Never tamper with the wiring or any electronic component parts or their software.

If it is necessary to modify the vehicle to accommodate a person with disabilities, contact an authorized Mercedes-Benz Center for details.

USA only: for details, contact our Customer Assistance Center on 1-800-FOR-MERCedes (1-800-367-6372).

Restraint system functionality

When the vehicle is switched on, a self-test is performed, during which the restraint system warning lamp lights up. It goes out no later than a few seconds after the vehicle is started. The components of the restraint system are then functional.

Malfunctioning restraint system

A malfunction has occurred in the restraint system if:

- The restraint system warning lamp does not light up when the vehicle is switched on
- The restraint system warning lamp lights up continuously or repeatedly during a journey
- **DANGER** Risk of death due to the restraint system malfunctioning

Components in the restraint system may be activated unintentionally or not deploy as intended in an accident. In the event of an accident, the high-voltage on-board electrical system may not be deactivated as intended. You may receive an electric shock if you touch the damaged components of the high-voltage on-board electrical system.

- Have the restraint system checked and repaired immediately at a qualified specialist workshop.
- After an accident, switch off the vehicle immediately.

Function of the restraint system in an accident

How the restraint system works depends on the severity of the impact detected and the apparent type of accident:

- · Frontal impact
- · Rear impact
- · Side impact
- Rollover

The activation thresholds for the components of the restraint system are determined based on the evaluation of the sensor values measured at various points in the vehicle. This process is pre-emptive in nature. The triggering/deployment of the components of the restraint system must take place in good time at the start of the collision.

Factors which can only be seen and measured after a collision has occurred cannot play a decisive role in airbag deployment. Nor do they provide an indication of airbag deployment.

The vehicle may be deformed significantly without an airbag being deployed. This is the case if only parts which are relatively easily deformed are affected and the rate of vehicle deceleration is not high. Conversely, an airbag may be deployed even though the vehicle suffers only minor deformation. If very rigid vehicle parts such as longitudinal members are hit, this may result in sufficiently high levels of vehicle deceleration.

Depending on the detected deployment situation, the components of the restraint system can be activated or deployed independently of each other:

- Emergency Tensioning Device: frontal impact, rear impact, side impact, rollover
- Driver's airbag, front passenger airbag: frontal impact
- Knee airbag: frontal impact

- Side airbag: side impact
- Window curtain airbag: side impact, rollover, frontal impact

The front passenger airbag can only be deployed in an accident if the PASSENGER AIR BAG OFF indicator lamp is off. If the front passenger seat is occupied, make sure, both before and during the journey, that the status of the front passenger airbag is correct (\rightarrow page 49).

WARNING Risk of burns from hot air bag components

The air bag parts are hot after an air bag has been deployed.

- Do not touch the air bag parts.
- Have a deployed air bag replaced at a qualified specialist workshop as soon as possible.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident. Take this into account, particularly if an Emergency Tensioning Device is trig-gered or an airbag deployed.

If the Emergency Tensioning Devices are triggered or an airbag is deployed, you will hear a bang, and a small amount of powder may also be released:

- The bang will not generally affect your hearing.
- In general, the powder released is not hazardous to health but may cause short-term breathing difficulties to persons suffering from asthma or other pulmonary conditions.

Provided it is safe to do so, leave the vehicle immediately or open the window in order to prevent breathing difficulties.

Airbags and pyrotechnic Emergency Tensioning Devices contain perchlorate material, which may require special handling or environmental protection measures. National guidelines regarding waste disposal must be observed. In California, see https://dtsc.ca.gov/. Using the search function, you will find information on perchlorate, for example.

Seat belts

Protection provided by the seat belt

Always fasten your seat belt correctly before starting a journey. A seat belt can only provide the best level of protection if it is worn correctly.

WARNING Risk of injury or death due to incorrectly fastened seat belt

If the seat belt is not worn correctly, it cannot perform its intended protective function.

In addition, an incorrectly fastened seat belt can also cause injuries, for example, in the event of an accident or when braking or changing direction suddenly.

Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly.

Always observe the instructions about the correct driver's seat position and adjusting the seat (\rightarrow page 91).

In order for the correctly worn seat belt to provide the intended level of protection, each vehicle occupant must observe the following information:

- The seat belt must not be twisted and must fit tightly and snugly across the body.
- The seat belt must be routed across the center of the shoulder and as low down across the hips as possible.
- The shoulder section of the seat belt should not touch your neck nor be routed under your arm or behind your back.
- Avoid wearing bulky clothing, e.g. a winter coat.
- Push the lap belt down as far as possible across your hips and pull tight with the shoulder section of the belt. Never route the lap belt across your abdomen.

Pregnant women must also take particular care with this.

- Never route the seat belt across sharp, pointed, abrasive or fragile objects.
- Only one person should use each seat belt at any one time.

 Never secure objects with a seat belt if the seat belt is also being used by one of the vehicle's occupants.

Also ensure that no objects, e.g. a cushion, are ever placed between a person and the seat.

The seat belts on the following seats are equipped with a child seat safety feature:

- · Front passenger seat
- Rear seats

Activate or deactivate the child seat safety feature of the seat belt (\rightarrow page 58).

If children are traveling in the vehicle, be sure to observe the instructions and safety notes on "Children in the vehicle" (\rightarrow page 54).

Always observe the instructions for loading the vehicle when securing objects, luggage or loads (\rightarrow page 106).

Limitations of the protection provided by the seat belt

WARNING Risk of injury or death due to an incorrect seat position

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.

In particular, you could slip beneath the seatbelt and become injured.

- Adjust the seat properly before beginning your journey.
- Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.
- WARNING Risk of injury or death when additional restraint systems are not used for persons with a smaller stature

Persons under 5 ft (1.50 m) tall cannot wear the seat belt correctly without a suitable additional restraint system.

- Always secure persons under 5 ft (1.50 m) tall in a suitable restraint system.
- WARNING Risk of injury or death due to damaged or modified seat belts

Seat belts cannot provide protection in the following situations:

- The seat belt is damaged, has been modified, is extremely dirty, bleached or dyed
- The seat belt buckle is damaged or extremely dirty
- Modifications have been made to the Emergency Tensioning Device, seat belt anchorage or seat belt retractor

Seat belts may sustain non-visible damage in an accident, e.g. due to glass splinters.

Modified or damaged seat belts could tear or fail in the event of an accident, for example.

Modified Emergency Tensioning Devices could accidentally trigger or fail to function as intended.

- Never modify the seat belt system, for example the seat belt, seat belt buckle, Emergency Tensioning Device, seat belt anchorage and seat belt retractor.
- Make sure that the seat belts are undamaged, not worn and clean.
- Always have the seat belts checked immediately after an accident at a qualified specialist workshop.

Only use seat belts which have been approved for your vehicle by Mercedes-Benz.

 WARNING Risk of injury or death from deployed pyrotechnic Emergency Tensioning Devices

Pyrotechnic Emergency Tensioning Devices that have been deployed are no longer operational and are unable to perform their intended protective function.

Therefore, have deployed pyrotechnic Emergency Tensioning Devices immediately replaced at a qualified specialist workshop. Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident.

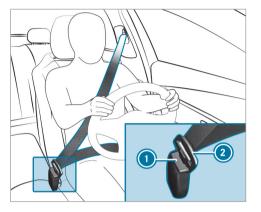

! NOTE Damage caused by trapping the seat belt

If an unused seat belt is not fully retracted, it may become trapped in the door or in the seat mechanism.

Always ensure that an unused seat belt is fully retracted.

Fastening seat belts

If the seat belt is pulled quickly or sharply, the seat belt retractor locks. The seat belt strap cannot be pulled out any further.

- Always engage seat belt tongue (2) of the seat belt into seat belt buckle (1) of the corresponding seat.
- (i) A seat belt can only provide the best level of protection if it is worn correctly. Observe the notes on fastening the seat belt (→ page 41).

NOTE Deployment of components of the restraint system when the front passenger seat is unoccupied and a seat belt is buckled

When the front passenger seat is unoccupied and the seat belt tongue of the seat belt is engaged in the seat belt buckle, components of the restraint system may deploy unnecessarily on the front passenger side, e.g. the Emergency Tensioning Device.

Only buckle the seat belts as intended.

Observe the notes on storage areas
 (→ page 106).

Information on installing a child restraint system and on children traveling in the vehicle can be found in the "Children in the vehicle" section (\rightarrow page 57).

Seat belt adjustment function

Vehicles with PRE-SAFE®: After a front seat belt has been fastened, the automatic seat belt adjustment may apply a certain tightening force. Do not hold the seat belt tightly while it is adjusting.

You can activate and deactivate the seat belt adjustment function using the multimedia system (\rightarrow page 44).

Activating/deactivating seat belt adjustment via the multimedia system

Multimedia system:

- → 🕞 >> Settings >> Vehicle
- Activate or deactivate Belt Adjustment.

Releasing seat belts

Press the release button in the seat belt buckle and guide the seat belt back with the seat belt tongue.

Seat belt warning function for the driver and front passenger

The <u></u>seat belt warning lamp in the Instrument Display is a reminder that all vehicle occupants must wear their seat belts correctly. The ______ seat belt warning lamp lights up for six seconds every time the vehicle is started.

In addition, a warning tone may sound.

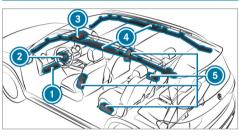

When the driver's and front passenger's doors are closed and the driver and front passenger have fastened their seat belts, the seat belt warning goes out.

In the following cases, the seat belt warning lights up during a journey if:

- The vehicle speed exceeds 15 mph (25 km/h) and the driver's or front passenger seat belt is not fastened.
- The driver or front passenger unfastens their seat belt while the vehicle is in motion.

Airbags

Overview of airbags

- 🚺 Knee airbag
- Driver's airbag
- Front passenger airbag
- Window curtain airbag
- 6 Side airbag

The installation location of an airbag is identified by the AIRBAG symbol.

When enabled, an airbag can provide additional protection for the respective vehicle occupant.

Potential protection provided by each airbag:

- Knee airbag: thigh, knee and lower leg
- Driver's airbag, front passenger airbag: head and ribcage
- Window curtain airbag: head
- Side airbag: ribcage and pelvis
- WARNING Risk of injury or death if the codriver airbag is enabled

If the co-driver airbag is enabled, a child on the co-driver seat may be struck by the codriver airbag during an accident.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (\rightarrow page 64). Also, always observe the notes on rearward-facing or forward-facing child restraint systems on the front passenger seat (\rightarrow page 63).

Information on automatic front passenger airbag shutoff

The front passenger airbag can only be deployed in an accident if the PASSENGER AIR BAG OFF indicator lamp is off. If the front passenger seat is occupied, make sure, both before and during the journey, that the status of the front passenger airbag is correct (\rightarrow page 49).

• NOTE Deployment of components of the restraint system when the front passenger seat is unoccupied

In an accident, the components of the restraint system may deploy unnecessarily on the front passenger side if:

- There are heavy objects on the front passenger seat.
- The seat belt tongue is engaged in the seat belt buckle of the front passenger seat and the front passenger seat is unoccupied.
- Store objects in a suitable place.
- Only one person should use each seat belt at any one time.

Depending on the detected accident situation, the window curtain airbag on the front passenger side may deploy. The airbag is deployed regardless of whether the front passenger seat is occupied.

Protection provided by the airbags

Depending on the accident situation, an airbag may supplement the protection offered by a correctly fastened seat belt.

 WARNING Risk of injury or death due to an incorrect seat position

If you deviate from the correct seat position, the airbag cannot perform its intended protective function.

Each vehicle occupant must make sure of the following:

• Fasten seat belts correctly. Pregnant women must take particular care to ensure that the lap belt never lies across the abdomen.

- Adopt the correct seat position and keep as far away as possible from the airbags.
- Observe the following information.
- Always make sure that there are no objects between the airbag and vehicle occupant.

To avoid the risks resulting from the deployment of an airbag, each vehicle occupant must observe the following information in particular:

 Before starting your journey, adjust your seat correctly; the driver's seat and front passenger seat should be moved as far back as possible.

When doing so, always observe the information on the correct driver's seat position (\rightarrow page 91).

- Only hold the steering wheel by the steering wheel rim. This allows the airbag to be fully deployed.
- Always lean against the seat backrest when the vehicle is in motion. Do not lean forwards or against the door or side window. You may

otherwise be in the deployment area of the airbags.

- The occupants must always keep their feet on the floor. Do not put your feet on the cockpit, for example. Your feet may otherwise be in the deployment area of the airbag.
- If children are traveling in the vehicle, observe the additional notes (→ page 54).
- Always stow and secure objects correctly.

Objects in the vehicle interior may prevent an airbag from functioning correctly. Each vehicle occupant must always make sure of the following in particular:

- There are no people, animals or objects between the vehicle occupants and an airbag.
- There are no objects between the seat, door and door pillar (B-pillar).
- There are no hard objects, e.g. coat hangers, hanging on the grab handles or coat hooks.
- There are no accessories, such as mobile navigation devices, mobile phones or cup holders, within the deployment area of an airbag, e.g.

on the cockpit, on the door, on the side window or on the side trim.

In addition, no connecting cables, tensioning straps or retaining straps must be routed or attached to the vehicle within the deployment area of an airbag. Always comply with the accessory manufacturer's installation instructions and, in particular, the notes on suitable places for installation.

• There are no heavy, sharp-edged or fragile objects in the pockets of your clothing. Store such objects in a suitable place.

Limitations of the protection provided by airbags

WARNING Risk of injury due to modifications to the cover of an airbag

If you modify the cover of an airbag or affix objects such as stickers to it, the airbag may no longer function correctly.

Never modify the cover of an airbag and do not affix objects to it. The installation location of an airbag is identified by the AIRBAG symbol (\rightarrow page 45).

Objects in the deployment area of an airbag may prevent the airbag from functioning correctly.

WARNING Risk of injury from objects in the deployment area of an airbag

Objects in the deployment area of an airbag can hinder or prevent the correct deployment of the airbag.

The airbag may then deploy in an uncontrolled manner and may even cause additional injuries to the vehicle occupants by deploying. This may be the case in particular if the airbag is integrated into the seat.

- Always stow and secure objects correctly.
- Before commencing your journey, make sure that no objects are stowed in the deployment area of an airbag.

WARNING Risk of injury or death due to the use of unsuitable seat covers

Due to unsuitable seat covers, the airbags cannot protect vehicle occupants as intended.

In addition, the operation of the automatic front passenger airbag shutoff could be restricted.

- You should only use seat covers that have been approved for the corresponding seats by Mercedes-Benz.
- WARNING Risk of injury due to malfunctioning sensors in the door

The function of the airbags can be impaired due to modifications or incorrect work performed on the doors or door trim, or if the doors are damaged.

- Never modify the doors or parts of the doors.
- Always have work on the doors or door trim carried out at a qualified specialist workshop.

WARNING Risk of injury due to deployed airbag

A deployed airbag no longer offers any protection.

Have the vehicle towed to a qualified specialist workshop in order to have the deployed airbag replaced.

Have deployed airbags replaced immediately.

Status of the front passenger front airbag

Function of the automatic front passenger airbag shutoff

The automatic front passenger airbag shutoff is able to detect whether the front passenger seat is occupied by a person or a child restraint system. The front passenger airbag is enabled or disabled accordingly. WARNING Risk of injury or death due to objects under the co-driver seat

Objects trapped under the co-driver seat can interfere with the function of the automatic co-driver airbag shutoff or damage the system.

- Do not store any objects under the codriver seat.
- When the co-driver seat is occupied, make sure that no objects are trapped under the co-driver seat.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (\rightarrow page 64). Also, always observe the notes on rearward-facing or forward-facing child restraint systems on the front passenger seat (\rightarrow page 63).

A person on the front passenger seat must observe the following information:

- Fasten seat belts correctly (\rightarrow page 41).
- Sit in an almost upright seat position with their back against the seat backrest.

• Sit with their feet resting on the floor, if possible.

The front passenger airbag may otherwise be disabled by mistake, for example, in the following situations:

- The front passenger transfers their weight by supporting themselves on a vehicle armrest.
- The front passenger sits in such a way that their weight is raised from the seat surface.
- **WARNING** Risk of injury or death due to a disabled front passenger airbag

The front passenger airbag is disabled when the PASSENGER AIR BAG OFF indicator lamp is lit.

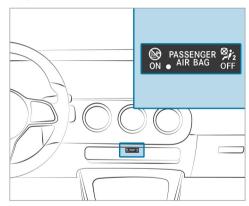

A person in the front passenger seat could then, for example, come into contact with the vehicle interior, especially if the person is sitting too close to the cockpit. If the front passenger seat is occupied, always ensure that:

- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- The front passenger seat has been moved as far back as possible.
- The person is seated correctly.
- Both before and during the journey, ensure that the status of the front passenger airbag is correct.

If the front passenger seat is occupied, the classification of the person or child restraint system on the front passenger seat takes place after the front passenger airbag shutoff self-test. The PASSENGER AIR BAG indicator lamps display the status of the front passenger airbag.

Always observe the notes on the function of the PASSENGER AIR BAG indicator lamps (\rightarrow page 49).

Function of the PASSENGER AIR BAG indicator lamps

Self-test of automatic front passenger airbag shut-off

When the vehicle is switched on, a self-test is performed during which the two PASSENGER AIR BAG ON and OFF indicator lamps light up simultaneously.

The status of the front passenger airbag is displayed via the PASSENGER AIR BAG indicator lamps after the self-test:

• ON is lit: the front passenger airbag may deploy during an accident.

The indicator lamp goes out after 60 seconds.

- ON and OFF are not lit: the front passenger airbag may deploy during an accident.
- **OFF is lit:** the front passenger airbag is disabled. It will then not be deployed in the event of an accident.

If the PASSENGER AIR BAG ON indicator lamp is off, only the PASSENGER AIR BAG OFF indicator lamp shows the status of the front passenger airbag. The PASSENGER AIR BAG OFF indicator lamp may be lit continuously or be off.

If the PASSENGER AIR BAG OFF indicator lamp and the restraint system warning lamp light up simultaneously, the front passenger seat may not be used. Also in this case, do not install a child restraint system on the front passenger seat. Have the automatic front passenger airbag shutoff checked and repaired immediately at a qualified specialist workshop.

Status display

If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation.

After installing a rearward-facing child restraint system on the front passenger seat: PASSENGER AIR BAG OFF must be lit continuously.

WARNING Risk of injury or fatal injury when using a rearward-facing child restraint system while the co-driver airbag is enabled

If you secure a child in a rearward-facing child restraint system on the co-driver seat and the PASSENGER AIR BAG OFF indicator lamp is off, the co-driver airbag can deploy in the event of an accident.

The child could be struck by the airbag.

- Always ensure that the co-driver airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.
- NEVER use a rearward-facing child restraint system on a seat with an ENA-BLED FRONT AIRBAG; DEATH or SERI-OUS INJURY to the CHILD can occur.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (\rightarrow page 63).

Depending on the child restraint system and the stature of the child, the PASSENGER AIR BAG OFF indicator lamp may be off. In this case, do not install the rearward-facing child restraint system on the front passenger seat.

Instead, install the rearward-facing child restraint system on a suitable rear seat.

After installing a forward-facing child restraint system on the front passenger seat: depending on the child restraint system and the stature of the child, PASSENGER AIR BAG OFF may be lit continuously or be off. Always observe the following information.

WARNING Risk of injury or death due to incorrect positioning of the forward-facing child restraint system

If you secure a child in a forward-facing child restraint system on the front passenger seat that is positioned too close to the cockpit, in the event of an accident, the child could:

- come into contact with parts of the vehicle's interior if the PASSENGER AIR BAG OFF indicator lamp is lit, for example
- be struck by the airbag if the PASSENGER AIR BAG OFF indicator lamp is off
- Always move the front passenger seat as far back as possible and fully retract the seat cushion length adjustment. While doing so, always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt outlet. If necessary,

adjust the front passenger seat accordingly.

 Always comply with the child restraint system manufacturer's installation instructions.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (\rightarrow page 63).

If a person is sitting on the front passenger seat: PASSENGER AIR BAG OFF may be lit continuously or be off, depending on the person's stature.

A person on the front passenger seat must always observe the following information:

• If the front passenger seat is occupied by an adult or a person with a stature corresponding to that of an adult, the PASSENGER AIR BAG OFF indicator lamp must be off. This indicates that the front passenger airbag is enabled.

If the PASSENGER AIR BAG OFF indicator lamp is lit continuously, an adult or person with a build corresponding to that of an adult must not use the front passenger seat.

Instead, they should use a rear seat.

- If the front passenger seat is occupied by a person of smaller stature (e.g. a teenager or small adult), the PASSENGER AIR BAG OFF indicator lamp is either lit continuously or remains off, depending on the classification.
 - If the PASSENGER AIR BAG OFF indicator lamp is off: move the front passenger seat as far back as possible, or the person of smaller stature should use a rear seat.
 - If the PASSENGER AIR BAG OFF indicator lamp is lit continuously: the person of smaller stature should not use the front passenger seat.
- ▲ WARNING Risk of injury or death when the PASSENGER AIR BAG OFF indicator lamp is lit

If the PASSENGER AIR BAG OFF indicator lamp remains lit after the self-test, the front passenger airbag is disabled.

If the front passenger seat is occupied, always ensure that:

- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- The person is seated properly with a correctly fastened seat belt.
- The front passenger seat has been moved as far back as possible.

Be sure to also observe the following further related subjects:

• Child restraint system on the front passenger seat (→ page 63)

PRE-SAFE[®] system

Function of PRE-SAFE® (anticipatory occupant protection)

 $\mathsf{PRE}\text{-}\mathsf{SAFE}^{\circledast}$ is able to detect certain critical driving situations and implement pre-emptive measures to protect the vehicle occupants.

 $\mathsf{PRE}\text{-}\mathsf{SAFE}^{\circledast}$ can implement the following measures independently of each other:

- Tightening the seat belts on the driver's seat and front passenger seat.
- Closing the side windows.
- Vehicles with sliding sunroof: closing the sliding sunroof.
- Vehicles with memory function: moving the front passenger seat to a more favorable seat position.
- PRE-SAFE[®] Sound: provided that the multimedia system is switched on, generating a brief noise signal to stimulate the innate protective mechanism of a person's hearing.

! NOTE Damage caused by objects in the footwell or behind the seat

The automatic adjustment of the seat position may result in damage to the seat and/or the object.

Stow objects in a suitable place.

Reversing the PRE-SAFE® system measures

If an accident did not occur, the pre-emptive measures that were taken are reversed.

You will need to perform certain settings yourself.

If the seat belt pre-tensioning is not reduced, move the seat backrest back slightly. The locking mechanism releases.

Function of PRE-SAFE® PLUS (anticipatory occupant protection plus)

PRE-SAFE[®] PLUS can detect certain impacts, particularly an imminent rear impact, and take preemptive measures to protect the vehicle occupants. These measures cannot necessarily prevent an imminent impact.

 $\mbox{PRE-SAFE}^{\circledast}$ PLUS can implement the following measures independently of each other:

- Tightening the seat belts on the driver's seat and front passenger seat.
- Increasing brake pressure when the vehicle is stationary. This brake application is canceled automatically when the vehicle pulls away.

If an accident did not occur, the pre-emptive measures that were taken are reversed.

System limits

The system will not initiate any action in the following situations:

• When backing up

The system will not initiate any braking application in the following situations:

- Whilst driving
 - or
- When entering or exiting a parking space while using Active Parking Assist

Automatic measures after an accident

Depending on the type and severity of the accident, and depending on the vehicle's equipment, the following measures can be implemented, for example:

- Automatic braking (post-collision brake)
- Activating the hazard warning light system
- Triggering an automatic emergency call (→ page 270)
- Switching off the drive system and high-voltage on-board electrical system
- · Unlocking the vehicle doors
- Lowering the side windows
- Displaying the emergency guide in the multimedia system display
- Switching on the interior lighting

Function of the post-collision brake

Depending on the accident situation, the post-collision brake can minimize the severity of a further collision or even avoid it.

If an accident is detected, the post-collision brake can implement automatic braking. When the vehi-

cle has come to a standstill, the electric parking brake is automatically applied.

The driver can cancel automatic braking by taking the following actions:

- Braking more strongly than automatic braking
- Fully depressing the accelerator pedal with force

Safely transporting children in the vehicle

Always observe when children are traveling in the vehicle

 Also strictly observe the safety notes for the specific situation. In this way you can recognize potential risks and avoid dangers if children are traveling in the vehicle
 (→ page 54).

Be diligent

Bear in mind that negligence when securing a child in the child restraint system may have serious consequences. Always be diligent in securing a child carefully before every journey.

Never allow babies and children to travel sitting on the lap of another vehicle occupant.

To improve protection for children younger than 12 years old or under 5 ft (1.50 m) in height, Mercedes-Benz recommends you observe the following information:

- Always secure the child in a child restraint system suitable for this Mercedes-Benz vehicle.
- The child restraint system must be appropriate to the age, weight and size of the child.
- The vehicle seat must be suitable for installing a child restraint system.

Accident statistics show that children secured on the rear seats are generally safer than children secured on the front seats. For this reason, Mercedes-Benz strongly advises that you install a child restraint system on a rear seat.

The generic term child restraint system

The generic term child restraint system is used in this Operator's Manual. A child restraint system is, for example:

• A baby car seat

- A rearward-facing child seat
- · A forward-facing child seat
- A child booster seat with a backrest and seat belt guide

Mercedes-Benz recommends using a child booster seat with a backrest.

The child restraint system must be appropriate to the age, weight and size of the child.

Observe laws and legal requirements

Always observe the legal requirements when using a child restraint system in the vehicle.

Observe standards for child restraint systems

All child restraint systems must meet the following standards:

- U.S. Federal Motor Vehicle Safety Standards 213 and 225
- Canadian Motor Vehicle Safety Standards 213
 and 210.2

Confirmation that the child restraint system complies with the standards can be found on an instruction label on the child restraint system. This confirmation can also be found in the installation instructions that are included with the child restraint system.

Detecting risks, avoiding danger

Securing systems for child restraint systems in the vehicle

Only use the following securing systems for child restraint systems:

- The LATCH-type (ISOFIX) securing rings
- The vehicle's seat belt system
- The Top Tether anchorages

Installing a LATCH-type (ISOFIX) child restraint system is preferred.

Simply attaching to the securing rings on the vehicle can reduce the risk of installing the child restraint system incorrectly.

When securing a child with the integrated seat belt of the LATCH-type (ISOFIX) child restraint system, always comply with the permissible gross weight for the child and child restraint system (\rightarrow page 58).

A booster seat may be necessary to achieve proper seat belt positioning for children over 40 lbs (18 kg) in weight or until they reach a height where a three-point seat belt can be fastened properly without a booster seat.

Mercedes-Benz recommends a suitable child booster seat with a backrest and seat belt guide.

Advantage of a rearward-facing child restraint system

It is preferable to transport a baby or a small child in a suitable rearward-facing child restraint system. In this case, the child sits in the opposite direction to the direction of travel and faces backwards.

Babies and small children have comparatively weak neck muscles in relation to the size and weight of their head. The risk of injury to the cervical spine during an accident can be reduced in a rearward-facing child restraint system.

Always secure a child restraint system correctly

WARNING Risk of injury or death due to incorrect installation of the child restraint system

The child can then not be protected or restrained as intended.

- Be sure to comply with the manufacturer's installation instructions for the child restraint system and its correct use.
- Make sure that the entire base of the child restraint system always rests on the sitting surface of the seat.
- Never place objects (e.g. cushions) under or behind the child restraint system.
- Use child restraint systems only with the original cover designed for them.
- Always replace damaged covers with genuine covers.

WARNING Risk of injury or death due to unsecured child restraint systems in the vehicle

If the child restraint system is incorrectly installed or not secured, it can come loose.

The child restraint system could be flung around and hit vehicle occupants.

- Always install child restraint systems correctly, even when not in use.
- Always comply with the child restraint system manufacturer's installation instructions.
- Always observe the child restraint system manufacturer's installation and operating instructions as well as the vehicle-specific information:
 - Installing the LATCH-type (ISOFIX) child restraint system on the right and left rear seats (→ page 58).
 - Securing the child restraint system with the seat belt on the rear seat (→ page 62).

Securing the child restraint system with the seat belt on the front passenger seat (\rightarrow page 64). Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (\rightarrow page 63).

If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation (\rightarrow page 49).

- Observe the warning labels in the vehicle interior and on the child restraint system.
- Also secure Top Tether if present.

Do not modify the child restraint system

WARNING Risk of injury due to modifications to the child restraint system

The child restraint system can no longer function properly. This poses an increased risk of injury.

Never modify a child restraint system.

Only affix accessories which have been specially approved for this child restraint system by the child restraint system's manufacturer.

Only use child restraint systems which are in proper working condition

▲ WARNING Risk of injury or death caused by the use of damaged child restraint systems

Child restraint systems or their retaining systems that have been subjected to stress in an accident may not be able to perform their intended protective function.

It may be the case that the child cannot be properly restrained.

- Always immediately replace child restraint systems that have been damaged or involved in an accident.
- Have the securing systems for the child restraint systems checked at a qualified specialist workshop before installing a child restraint system again.

Avoid direct sunlight

WARNING Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up excessively.

Children could suffer burns from these parts, particularly the metallic parts of the child restraint system.

- Always make sure that the child restraint system is not exposed to direct sunlight.
- Cover the child restraint system with a blanket, for example.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child into it.
- Never leave children unattended in the vehicle.

Observe when stopping or parking

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the transmission position.
- starting the vehicle.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

- Keep the vehicle SmartKey out of reach of children.
- WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

Never leave persons, particularly children, unattended in the vehicle.

Overview of suitable seats in the vehicle for installing a child restraint system

Left/right rear seat

Second row of seats (left and right seat) – preferred securing system:

- LATCH-type (ISOFIX) child seat securing system
- Also secure Top Tether if present $(\rightarrow page 61)$.

Third row of seats - preferred securing system:

- LATCH-type (ISOFIX) child seat securing system
- Also secure Top Tether if present $(\rightarrow page 61)$.

Left/right rear seat (second and third seat row) – alternative securing system:

- 🔏 Vehicle seat belt
- Also secure Top Tether if present $(\rightarrow page 61)$.

Front passenger seat

Securing system:

🗼 Vehicle seat belt

Be sure to observe:

- If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation (→ page 49).
- Notes on automatic front passenger airbag shutoff (→ page 48).

Center rear seat (second seat row)

Securing system:

- 🗼 Vehicle seat belt
- Also secure Top Tether if present $(\rightarrow page 61)$.

Activating/deactivating the child seat safety feature of the seat belt

▲ WARNING Risk of injury or death if a seat belt is unfastened while the vehicle is in motion

If the seat belt is released while the vehicle is in motion, the child restraint system is no longer correctly secured. The child seat safety feature is deactivated and the seat belt is drawn in a bit by the inertia reel.

It is therefore not possible to engage the seat belt again.

Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Activate the child seat safety feature again and correctly secure the child restraint system.

When enabled, the child seat safety feature ensures that the seat belts of the front passenger seat and rear seats do not slacken once the child restraint system is secured.

Installing a child restraint system:

- Always comply with the manufacturer's installation instructions when installing and removing the child restraint system.
- Pull the seat belt smoothly from the seat belt outlet.
- Engage the seat belt tongue in the seat belt buckle.

Activating the child seat safety feature:

Pull the seat belt out fully and let the inertia reel retract it again.

When the child seat safety feature is activated, you should hear a ratcheting sound.

Push the child restraint system down until the seat belt sits tightly.

Deactivating the child seat safety feature:

- Press the release button of the seat belt buckle.
- Hold the seat belt tongue and guide it back to the seat belt outlet.

Installing a LATCH-type (ISOFIX) child restraint system on the left and right rear seats

Installing a LATCH-type (ISOFIX) child restraint system on the left and right rear seats

▲ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.

 As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.

- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.
- Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the rear seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

▲ WARNING Risk of injury or death if the permissible gross mass of the child and child restraint system together is exceeded.

Too much load may be placed on the LATCHtype (ISOFIX) child restraint system and the child may not be restrained correctly in the event of an accident, for example.

If the child and the child restraint system together weigh more than the permissible gross mass of 73 lb (33 kg), only use a LATCH-type (ISOFIX) child restraint system with which the child is secured with the vehicle seat belt.

Also secure the child restraint system with the Top Tether belt, if available.

Always comply with the information about the mass of the child restraint system:

- In the manufacturer's installation and operating instructions for the child restraint system used
- On a label on the child restraint system, if
 present

Regularly check that the permissible gross mass of the child and child restraint system is still complied with.

When installing a child restraint system, observe the following:

- Always observe the correct use of the seats and consider their suitability for attaching a child restraint system.
- Always comply with the manufacturer's installation and operating instructions for the child restraint system used.

Make sure that the child's feet do not touch the front seat. If necessary, move the front seat slightly forwards.

When installing a LATCH-type (ISOFIX) child restraint system, also observe the following:

- ✓ When using a baby car seat in weight group 0/0+ and a rearward-facing child restraint system in weight group I on a rear seat: adjust the front seat so that the seat does not touch the child restraint system.
- ✓ When using a forward-facing child restraint system in weight group I: remove the head restraint from the respective seat, if possible. In addition, the backrest of the child restraint system must lie as flat as possible against the backrest of the vehicle seat.

After the child restraint system has been removed, replace the head restraint immediately and adjust all head restraints correctly.

✓ When using a child restraint system on a seat on the third row of seats: adjust the front seat so that it does not touch the child restraint system and move the seat backrest

of the front seat into an upright position if necessary.

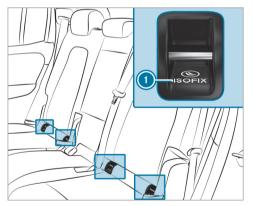

✓ If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the maximum size setting for child restraint systems in weight group II or III.

Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

- The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing the wrong direction. Where possible, adjust the seat cushion inclination accordingly.
- The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.
- Before every journey, make sure that the LATCH-type (ISOFIX) child restraint system is correctly engaged in both mounting brackets in the vehicle.

- **I** NOTE Damage to the seat belt for the center seat during installation of the child restraint system
- Make sure that the seat belt is not trapped.

Rear bench seat (second row of seats):

 Attach the LATCH-type (ISOFIX) child restraint system to both LATCH-type (ISOFIX) mounting brackets ①.

Vehicles with a third row of seats:

 Attach the LATCH-type (ISOFIX) child restraint system to both LATCH-type (ISOFIX) mounting brackets ①.

Fastening a Top Tether

 WARNING Risk of injury or death if the rear seat backrests are not locked after Top Tether belts are installed

The rear seat backrests may fold forwards when you are driving.

As a result, child restraint systems will no longer be able to perform their intended protective function. This may also cause additional injuries.

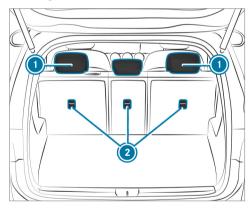

- Always lock rear seat backrests after installing Top Tether belts.
- Observe the lock verification indicator.

If the rear seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

If the child restraint system is equipped with a Top Tether belt:

The risk of injury may be reduced by Top Tether. The Top Tether belt enables an additional connection between the child restraint system attached with LATCH-type (ISOFIX) (left and right rear seats) or the seat belt (all rear seats) and the vehicle.

The Top Tether anchorages for the second row of seats are located on the back of the seat back-rest. For the third row of seats, use the Top Tether anchorage on the back of the seat backrest.

Second row of seats

- If necessary, slide head restraint () upwards $(\rightarrow page 100)$.
- Install the LATCH-type (ISOFIX) or beltsecured child restraint system with Top Tether. In doing so, comply with the child restraint system manufacturer's installation instructions.

- Guide Top Tether belt () under head restraint
 () between the two head restraint bars.
- Hook Top Tether hook (3) into Top Tether anchorage (2) without twisting.

- Tension Top Tether belt (2). In doing so, comply with the child restraint system manufacturer's installation instructions.
- If necessary, slide head restraint () downwards (→ page 100). Make sure that you do not interfere with the correct routing of Top Tether belt ().

Securing the child restraint system with the seat belt

Securing the child restraint system with the seat belt on the rear seat

▲ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.

 As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.

- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.
- Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the rear seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

When installing a belt-secured child restraint system, observe the following:

- Always comply with the manufacturer's installation and operating instructions for the child restraint system used.
- Also secure Top Tether if present $(\rightarrow \text{ page 61}).$
- When using a weight category 0/0+ baby car seat and a weight category I rearwardfacing child restraint system on a rear seat:

adjust the front seat so that the seat does not touch the child restraint system.

When using a weight category I forwardfacing child restraint system: remove the head restraint from the respective seat, if possible.

After the child restraint system has been removed, replace the head restraint immediately and adjust all head restraints correctly.

- The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the rear seat.
- ✓ If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the maximum size setting for child restraint systems in weight category II or III.

Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing the wrong direction. Where possible, adjust the seat cushion inclination accordingly.

- The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.
- Make sure that the child's feet do not touch the front seat. If necessary, move the front seat slightly forwards.

The seat belts on the following seats are equipped with a special seatbelt retractor:

- Front passenger seat
- Rear seats

When enabled, the special seatbelt retractor ensures that the seat belts of the front passenger seat and rear seats do not slacken once the child restraint system is secured (\rightarrow page 58).

- Install the child restraint system. The entire base of the child restraint system must always rest on the seat surface of the rear seat.
- Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of

the vehicle to the shoulder belt guide on the child restraint system.

The shoulder belt strap must be routed forward from the seat belt outlet.

Notes on rearward-facing and forward-facing child restraint systems on the front passenger seat

▲ WARNING Risk of injury or fatal injury when using a rearward-facing child restraint system while the co-driver airbag is enabled

If you secure a child in a rearward-facing child restraint system on the co-driver seat and the PASSENGER AIR BAG OFF indicator lamp is off, the co-driver airbag can deploy in the event of an accident.

The child could be struck by the airbag.

- Always ensure that the co-driver airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.
- NEVER use a rearward-facing child restraint system on a seat with an ENA-

BLED FRONT AIRBAG; DEATH or SERI-OUS INJURY to the CHILD can occur.

Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (\rightarrow page 64).

Always observe the status of the front passenger airbag on the PASSENGER AIR BAG OFF indicator lamp:

- When using a rearward-facing child restraint system on the front passenger seat, the front passenger airbag must always be disabled. This is only the case if the PASSENGER AIR BAG OFF indicator lamp is lit continuously (→ page 49).
- If the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag is enabled. The front passenger airbag may deploy during an accident.

Securing the child restraint system with the seat belt on the front passenger seat

When installing a belt-secured child restraint system on the front passenger seat, always observe the following:

- ✓ Observe the notes on rearward-facing and forward-facing child restraint systems on the front passenger seat (→ page 63).
- Observe the child restraint system manufacturer's installation and operating instructions.
- When using a forward-facing child restraint system in weight category I: remove the head restraint from the respective seat, if possible.

After the child restraint system has been removed, replace the head restraint immediately and adjust all head restraints correctly.

- ✓ The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the front passenger seat.
- ✓ If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the

maximum size setting for child restraint systems in weight category II or III.

Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

- ✓ The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing the wrong direction.
- The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.
- Never place objects (e.g. cushions) under or behind the child restraint system.

The seat belt on the front passenger side is equipped with a special seatbelt retractor.

When enabled, the special seatbelt retractor ensures that the seat belt does not slacken once the child seat is secured (\rightarrow page 58).

WARNING Risk of injury or death due to objects between the seat surface and the child restraint system

Objects between the seat surface and the child restraint system could affect the function of the automatic front passenger airbag shut-off.

- Do not place any objects between the seat surface and the child restraint system.
- Always make sure that the child restraint system is correctly installed.
- Set the front passenger seat as far back as possible and move the seat into the highest position if possible.
- Adjust the seat cushion inclination so that the front edge of the seat cushion is in the highest position and the rear edge of the seat cushion is in the lowest position.
- Set the seat backrest to the most vertical position possible.

- Install the child restraint system.
 The entire base of the child restraint system must always rest on the sitting surface of the front passenger seat.
- Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system.

The shoulder belt strap must be routed forwards and downwards from the seat belt outlet.

If necessary, adjust the front passenger seat accordingly.

Child-proof locks

Activating or deactivating the child safety lock for the rear doors

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the transmission position.
- starting the vehicle.
- Never leave children unattended in the vehicle.

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.
- WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

- Never leave persons, particularly children, unattended in the vehicle.
- **WARNING** Risk of accident and injury due to children left unattended in the vehicle

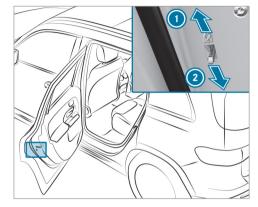

If children are traveling in the vehicle, they could, in particular:

- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

- Always activate the installed child safety locks if children are traveling in the vehicle.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

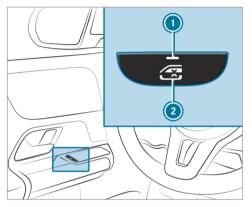

There are child safety locks for the rear doors and the rear side windows.

The child safety lock on the rear doors secures each door separately. The doors can no longer be opened from the inside.

- Press the lever in direction ① (activate) or ② (deactivate).
- Make sure that the child safety locks are working properly.

Activating and deactivating the child safety lock for the rear side windows

To activate/deactivate: press button 2.

The rear side window can be opened or closed in the following cases:

 indicator lamp ① is lit: via the switch on the driver's door

 indicator lamp () is off: via the switch on the corresponding rear door or driver's door

Notes on pets in the vehicle

WARNING Risk of accident and injury due to animals left unsecured or unattended in the vehicle

If you leave animals in the vehicle unattended or unsecured, they could possibly press buttons or switches.

An animal may:

- Activate vehicle equipment and become trapped, for example
- Switch systems on or off and endanger other road users

Unsecured animals may be thrown around in the vehicle in the event of an accident or sudden steering and braking maneuvers and injure vehicle occupants in the process.

- Never leave animals in the vehicle unattended.
- Always correctly secure animals while driving, e.g. using a suitable animal carrier.

68 Opening and closing

SmartKey

Overview of key functions

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the transmission position.
- starting the vehicle.
- Never leave children unattended in the vehicle.

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.
- I NOTE Damage to the SmartKey caused by magnetic fields
- Keep the SmartKey away from strong magnetic fields.

Vehicle key with panic alarm Locks Indicator lamp

- Oliver Unlocks
- Opens/closes the tailgate
- 6 Panic alarm
- (i) If indicator lamp (2) does not light up after pressing the 😨 or 😨 button, the battery is weak or possibly discharged. Replace the battery as soon as possible.

Replace the key battery (\rightarrow page 70).

The key locks and unlocks the following components:

- Doors
- Socket flap
- Tailgate

If the vehicle is not opened within approximately 40 seconds after unlocking, it locks again. Antitheft protection is activated again.

Do not keep the key together with electronic devices or metal objects. This can affect the key's functionality.

Activating/deactivating the acoustic locking verification signal

Multimedia system:

→ 🕞 >> Settings >> Vehicle

Activate or deactivate Acoustic Lock.

Arming/disarming the panic alarm

Requirements:

• The vehicle is switched off.

 To activate: press button () for approximately one second.
 A visual and audible alarm is triggered.

- **To deactivate:** briefly press button **()** again. or
 - Press the start/stop button. A SmartKey belonging to the vehicle must be detected in the vehicle.

Changing the unlocking settings

Possible unlocking functions of the SmartKey:

- Central unlocking
- Unlocking the driver's door and socket flap
- ► To switch between settings: press the and buttons simultaneously for approximately six seconds until the indicator lamp flashes twice.

Options if the unlocking function for the driver's door and socket flap has been selected:

- Vehicles with KEYLESS-GO: if you touch the inner surface of the door handle on the driver's door, only the driver's door and the socket flap are unlocked.

Deactivating the function of the SmartKey

Vehicles with KEYLESS-GO: if you deactivate the function of the SmartKey, the KEYLESS-GO functions are also deactivated. Access or drive authorization by KEYLESS-GO is then no longer possible with that particular SmartKey. Activate the function of the SmartKey so that all its functions will again be available.

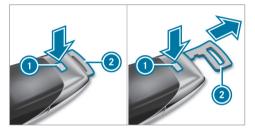

You can also deactivate the function of the Smart-Key to reduce the energy consumption of the SmartKey if you do not use the vehicle or a Smart-Key for an extended period of time.

- To deactivate: press the button on the SmartKey twice in quick succession. The SmartKey indicator lamp flashes twice briefly and lights up once.
- **To activate:** press any button on the SmartKey.
- When the vehicle is started with the SmartKey in the marked space of the center console, the function of the SmartKey is automatically activated (→ page 146).

70 Opening and closing

Removing/inserting the emergency key

Removing the emergency key

- Press release button ①.
 Emergency key ② is pushed out slightly.
- Pull out emergency key ② until it engages in the intermediate position.
- Press release button ① again and fully remove emergency key ②.

Inserting the emergency key

- Press release button ①.
- Insert emergency key ② to the intermediate position or fully until it engages.

 You can use the intermediate position of emergency key (2) to attach the SmartKey to a key ring.

Replacing the SmartKey battery

DANGER Risk of fatal injuries due to swallowing batteries

Batteries contain toxic and corrosive substances. Swallowing batteries may cause severe internal burns to occur within two hours.

There is a risk of fatal injury.

- Keep batteries out of the reach of children.
- If the cap and/or the battery compartment does not close securely, do not use the SmartKey any longer and keep out of the reach of children.
- If batteries are swallowed, seek medical attention immediately.

ENVIRONMENTAL NOTE Environmental damage due to improper disposal of batteries

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.

Requirements:

• You require a CR 2032 3 V cell battery.

Mercedes-Benz recommends that you have the battery replaced at a qualified specialist work-shop.

Remove the emergency key (\rightarrow page 70).

- Press release knob ② down fully and slide cover ① in the direction of the arrow.
- Fold out cover ① in the direction of the arrow and remove.
- Remove battery compartment (3) and take out the discharged battery.
- Insert the new battery into battery compartment ③. Observe the positive pole marking in the battery compartment and on the battery when doing this.
- Push in battery compartment (3).
- Re-attach cover ① and push it until it engages.

Problems with the SmartKey, troubleshooting

You can no longer lock or unlock the vehicle Possible causes:

- The SmartKey battery is weak or discharged.
- Check the battery using the indicator lamp $(\rightarrow page 68)$.
- Replace the SmartKey battery, if necessary (
 → page 70).
- Use the replacement SmartKey.
- Use the emergency key to lock or unlock $(\rightarrow page 74)$.
- Have the SmartKey checked at a qualified specialist workshop.

There is interference from a powerful radio signal source

Possible causes if the function of the SmartKey is impaired:

- High voltage power lines
- Mobile phones
- Electronic devices (notebooks, tablets)

- Shielding due to metal objects or induction loops for electrical gate systems or automatic barriers
- Make sure that there is sufficient distance between the SmartKey and the potential source of interference.

You have lost a SmartKey

- Have the SmartKey deactivated at a qualified specialist workshop.
- If necessary, have the mechanical lock replaced as well.

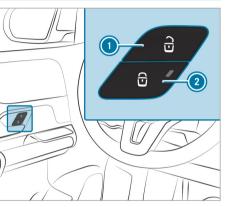

Doors

Unlocking/opening the doors from the inside

- To unlock and open a front door: pull door handle ①.
- To unlock a rear door: pull the rear door handle.
- To open a rear door: pull the rear door handle again.

Centrally locking and unlocking the vehicle from the inside

- To unlock: press button ①.
- To lock: press button 2.

The red indicator lamp on button ② lights up once the vehicle is locked.

(i) The buttons are also on the front passenger door.

The socket flap is also locked and unlocked. The socket flap can be opened even if a SmartKey is detected in the vehicle.

The vehicle is not unlocked:

- If you have locked the vehicle using the Smart-Key
- If you have locked the vehicle using KEYLESS-GO

Locking/unlocking the vehicle with KEYLESS-GO

Requirements:

- The SmartKey is outside the vehicle.
- The distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).
- The driver's door and the door on which the door handle is used are closed.
- **!** NOTE Vehicle damage due to unintentional opening of the tailgate
- When using an automatic car wash
- When using a high pressure cleaner

 Deactivate the function of the SmartKey in these situations.

or

Make sure that the SmartKey is at a minimum distance of 10 ft (3 m) away from the vehicle.

Observe the notes:

- On washing the vehicle in a car wash
 (→ page 285)
- On using a high pressure cleaner (→ page 287)

- **To unlock the vehicle:** touch the inner surface of the door handle.
- To lock the vehicle: touch sensor surface ① or ②.
- Convenience closing: touch recessed sensor surface (2) until the closing process has been completed.

 (i) Further information on convenience closing (→ page 83).

If you open the tailgate from outside, it is automatically unlocked.

Problems with KEYLESS-GO, troubleshooting

You can no longer lock or unlock the vehicle using KEYLESS-GO

Possible causes:

- The function of the SmartKey has been deactivated.
- The SmartKey battery is weak or discharged.
- Activate the function of the SmartKey $(\rightarrow page 69)$.
- Check the battery using the indicator lamp $(\rightarrow page 68)$.
- Replace the SmartKey battery, if necessary $(\rightarrow page 70)$.
- Use the replacement SmartKey.
- Use the emergency key to lock or unlock $(\rightarrow page 74)$.

Have the vehicle and SmartKey checked at a qualified specialist workshop.

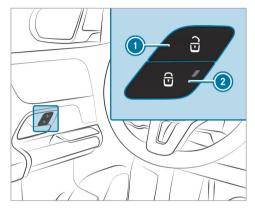

There is interference from a powerful radio signal source

Possible causes if the function of KEYLESS-GO is impaired:

- High voltage power lines
- Mobile phones
- Electronic devices (notebooks, tablets)
- Shielding due to metal objects or induction loops for electrical gate systems or automatic barriers
- Make sure that there is sufficient distance between the SmartKey and the potential source of interference.

Activating/deactivating the automatic locking feature

The vehicle is locked automatically when the vehicle is switched on and the wheels are turning faster than walking pace.

- To activate: press and hold button (2) for approximately five seconds until an acoustic signal sounds.
- To deactivate: press and hold button () for approximately five seconds until an acoustic signal sounds.

The red indicator lamp on button (2) lights up once the vehicle is locked.

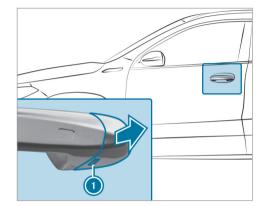

In the following situations, there is a danger of being locked out when the function is activated:

- While the vehicle is being tow-started or pushed
- If the vehicle is being tested on a roller dynamometer

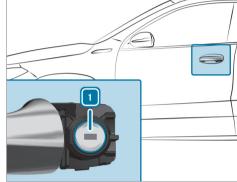

Locking/unlocking the vehicle with the emergency key

Locking/unlocking the driver's door with the emergency key

(i) If you wish to lock the vehicle entirely using the emergency key, first press the button for locking from the inside while the driver's door is open. Then proceed to lock the driver's door using the emergency key.

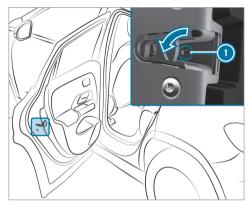

- Remove the emergency key (\rightarrow page 70).
- Insert the emergency key as far as it will go into opening () in the cover.
- Pull and hold the door handle.
- Pull the cover on the emergency key as straight as possible away from the vehicle until it releases.

- **To unlock:** turn the emergency key counterclockwise to position 1.
- **To lock:** turn the emergency key clockwise to position 1.
- Carefully press the cover onto the lock cylinder until it engages and is seated firmly.

Locking the front passenger door and rear doors

- Insert a suitable object, e.g. the emergency key, into opening ① on the door lock.
- To lock the left-hand side of the vehicle: turn the emergency key counter-clockwise as far as it will go.

Release the door handle.

 To lock the right-hand side of the vehicle: turn the emergency key clockwise as far as it will go.

If the locked door is then closed, it can no longer be opened from the outside.

Cargo compartment

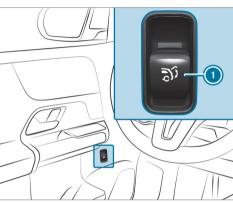

Opening the tailgate

! NOTE Damage to the tailgate caused by obstacles above the vehicle

The tailgate swings rearwards and upwards when it is opened.

- Make sure that there is sufficient space behind and above the tailgate.
- Press the top of the Mercedes star.
- Vehicles with HANDS-FREE ACCESS: Make a kicking movement with your foot below the bumper (→ page 79).

Vehicles with an EASY-PACK tailgate

 Pull remote operating switch ① until the tailgate opens.

or

- Press and hold the 🚮 button on the Smart-Key.
- If the tailgate is unlocked, press the top of the Mercedes star.

 If the tailgate is stopped in an intermediate position, pull it upwards. Release it as soon as it begins to open.

If an obstacle obstructs the tailgate during the automatic opening process, blockage detection will stop the tailgate. The automatic blockage detection function is only an aid. It is not a substitute for your attentiveness.

Closing the tailgate

WARNING Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

Always stow objects in such a way that they cannot be thrown around. Before the journey, secure objects, luggage or loads against slipping or tipping over.

Observe the notes on loading the vehicle. **Notes on closing the tailgate:** your vehicle is equipped with automatic SmartKey recognition. If a SmartKey belonging to the vehicle is detected in the vehicle, the tailgate will not be locked.

Note that the tailgate will not be locked in the following situation:

• You have locked the vehicle and close the tailgate while a SmartKey belonging to the vehicle is inside the vehicle.

and

• A second SmartKey belonging to the vehicle is not detected outside the vehicle.

Automatic SmartKey recognition is only an aid and is not a substitute for your attentiveness.

 Before locking, ensure that at least one SmartKey belonging to the vehicle is outside the vehicle. To close the tailgate: pull the tailgate downwards with the handle and let it drop into the lock.

Vehicles with an EASY-PACK tailgate

WARNING Risk of becoming trapped during automatic closing of the tailgate

Body parts may become trapped. There may be people in the closing area.

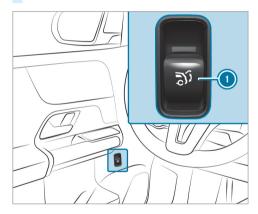

Make sure that nobody is in the vicinity of the closing area.

Use one of the following options to stop the closing process:

- Press the 🚮 button on the SmartKey.
- Press or pull the remote operating switch on the driver's door.
- Press the closing or locking button on the tailgate.
- Press the top of the Mercedes star on the tailgate.

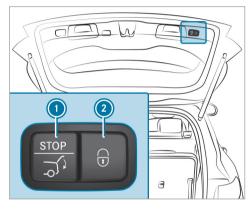

Vehicles with HANDS-FREE ACCESS: it is also possible to stop the closing process by making a kicking movement below the rear bumper.

To close the tailgate: pull the tailgate downwards slightly. Release it as soon as it begins to close.

Switch on the power supply or the vehicle.

 Push remote operating switch ① until the tailgate is fully closed.

Press closing button ① on the tailgate.

Vehicles with KEYLESS-GO

- Press locking button ② on the tailgate.
 If a SmartKey is detected outside the vehicle, the tailgate will close and the vehicle will be locked.
- Press and hold the 31 button on the Smart-Key. The SmartKey must be in the vicinity of the vehicle.

Vehicles with HANDS-FREE ACCESS

Make a kicking movement with your foot below the bumper (\rightarrow page 79).

Automatic reversing function for the tailgate

The tailgate is equipped with automatic blockage detection with a reversing function. If an obstacle obstructs the tailgate during the automatic closing process, it will automatically open again slightly. Automatic blockage detection with the reversing function is only an aid and is not a substitute for your attentiveness.

During the closing process, make sure that no body parts are in the closing area. WARNING Risk of becoming trapped despite reversing function

The reversing function will not react:

- To soft, light and thin objects, e.g. fingers
- Towards the end of the closing procedure

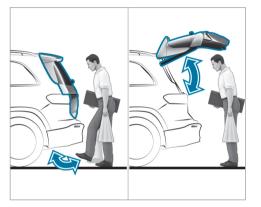

In these situations in particular, the reversing function cannot prevent someone being trapped.

Ensure that no body parts are in the closing area.

If someone is trapped, either:

- Press the 🕉 button on the SmartKey.
- Press or pull the remote operating switch on the driver's door.
- Press the closing or locking button on the tailgate.
- Press the top of the Mercedes star on the tailgate.

HANDS-FREE ACCESS function

With HANDS-FREE ACCESS you can open, close or stop the closing process of the tailgate by performing a kicking movement under the rear bumper.

The kicking movement triggers the opening or closing process alternately.

Observe the notes when opening (\rightarrow page 76) and closing (\rightarrow page 76) the tailgate.

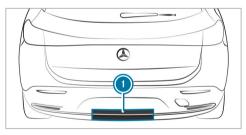

- (i) Two warning tones sound when the tailgate is opening or closing.
- **!** NOTE Vehicle damage due to unintentional opening of the tailgate
- When using an automatic car wash
- When using a high pressure cleaner
- Deactivate the function of the SmartKey in these situations.
- or
- Make sure that the SmartKey is at a minimum distance of 10 ft (3 m) away from the vehicle.

When making the kicking movement, make sure that you are standing firmly on the ground. You could otherwise lose your balance, e.g. on ice.

Observe the following notes:

• The SmartKey is behind the vehicle.

- Stand at least 12 in (30 cm) away from the vehicle while performing the kicking movement.
- Do not come into contact with the bumper while making the kicking movement.
- Do not carry out the kicking movement too slowly.
- The kicking movement must be towards the vehicle and back again.

Detection range of the sensors

If several consecutive kicking movements are not successful, wait ten seconds.

System limits

The system may be impaired or may not function in the following cases:

- The sensors are dirty, e.g. due to road salt or snow.
- The kicking movement is made using a prosthetic leg.

The tailgate can open or close unintentionally in the following situations:

- A person's arms or legs are moving in the sensor detection range, e.g. when polishing the vehicle or picking up objects.
- Objects are moved or placed behind the vehicle, e.g. a charging cable or luggage.
- Clamping straps, tarps or other coverings are pulled over the bumper.
- A protective mat with a length reaching over the trunk sill down into the detection range of the sensors is used.
- The protective mat is not secured correctly.

Deactivate the function of the SmartKey (\rightarrow page 69) or do not carry the SmartKey about your person in such situations.

Limiting the opening angle of the tailgate

Activating the opening angle limiter

You can limit the opening angle of the tailgate in the top half of its opening range up to a point shortly before the end position.

- Stop the opening procedure of the tailgate at the desired position.
- Press and hold the closing button on the tailgate until you hear a short acoustic signal. The opening angle limiter will be activated. The tailgate will then stop in the stored position when opened.

To open the tailgate fully, pull the top part of the Mercedes star on the tailgate again after it has stopped automatically.

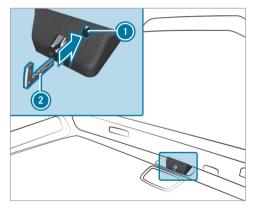

Deactivating the opening angle limiter

Press and hold the closing button on the tailgate until two short acoustic signals sound.

Unlocking the tailgate with the emergency key

Requirements:

- The rear seat backrest has been folded forward.
- The cargo compartment cover has been removed.

Remove the emergency key (\rightarrow page 70).

 Insert emergency key ② into opening ① in the trim and push it in. The tailgate will be unlocked.

Side windows

Opening and closing the side windows

WARNING Risk of entrapment when opening a side window

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.

- When opening, make sure that nobody is touching the side window.
- If someone is trapped, release the button immediately or pull it in order to close the side window again.
- WARNING Risk of becoming trapped when closing a side window

When closing a side window, body parts could be trapped in the closing area in the process.

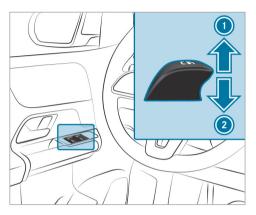

- When closing, make sure that no body parts are in the closing area.
- If someone is trapped, release the button immediately or press the button in order to reopen the side window.
- **WARNING** Risk of becoming trapped when children operate the side windows

Children could become trapped if they operate the side windows, particularly when unattended.

- Activate the child safety lock for the rear passenger compartment side windows.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Never leave children unattended in the vehicle.

Requirements:

• The power supply or the vehicle has been switched on.

Closes
 Opens

Opens

The buttons on the driver's door take precedence.

- To start automatic operation: press the button beyond the point of resistance or pull and release it.
- ► To interrupt automatic operation: press or pull the _____ button again.

When the vehicle is switched off, you can continue to operate the side windows.

This function is available for around four minutes or until a front door is opened.

Automatic reversing function of the side windows

If an obstacle impedes a side window during the closing process, the side window will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

- During the closing process, make sure that no body parts are in the closing area.
- ▲ **WARNING** Risk of becoming trapped despite there being reversing protection on the side window

The reversing function does not react:

- To soft, light and thin objects, e.g. fingers.
- During resetting.

The reversing function cannot prevent someone from becoming trapped in these situations.

- During the closing process, make sure that no body parts are in the closing area.
- If someone becomes trapped, press the
 button to open the side window again.

Convenience opening (ventilating the vehicle before starting a journey)

WARNING Risk of entrapment when opening a side window

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.

- When opening, make sure that nobody is touching the side window.
- Release the button immediately if somebody becomes trapped.

Requirements:

• The SmartKey is in the immediate vicinity of the vehicle.

▶ Press and hold the 🔒 button on the Smart-Key.

The following functions are performed:

- The vehicle is unlocked.
- The side windows are opened.
- The panoramic sliding roof is opened.
- The seat ventilation of the driver's seat is switched on.
- If the roller sunblind of the panoramic sliding sunroof is closed, the roller sunblind is opened first.
- To interrupt convenience opening: release the button.
- ► To continue convenience opening: press and hold the 🔁 button again.

Convenience closing (closing the vehicle from outside)

 WARNING Risk of entrapment due to not paying attention during convenience closing

When the convenience closing feature is operating, parts of the body could become trapped in the closing area of the side window and the sliding sunroof.

When the convenience closing feature is operating, monitor the entire closing process and make sure that no body parts are in the closing area.

Requirements:

- The SmartKey is in the immediate vicinity of the vehicle.
- ▶ Press and hold the 🔁 button on the Smart-Key.

The following functions are performed:

- The vehicle is locked.
- The side windows are closed.

- The panoramic sliding roof is closed.
- To interrupt convenience closing: release the 🕒 button.
- ► To continue convenience closing: press and hold the 🕀 button again.
- (i) Convenience closing also functions with KEY-LESS-GO (\rightarrow page 72).

Resolving problems with the side windows

WARNING Risk of becoming trapped or fatally injured if reversing protection is not activated

If you close a side window again immediately after it has been blocked, the side window will close with increased or maximum force. The reversing function is then not active and body parts may become trapped.

- Make sure that no parts of the body are in the closing area.
- To stop the closing process, release the button or press the button again to reopen the side window.

A side window cannot be closed and you cannot see the cause.

- Check to see whether any objects are in the window guide.
- Adjust the side windows.

Adjusting the side windows

If a side window is obstructed during closing and reopens again immediately:

Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (re-adjustment).

The side window will be closed without the automatic reversing function.

If the side window is obstructed again and reopens again immediately:

Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (follow-up adjustment). The side window will be closed without the automatic reversing function.

The side windows cannot be opened or closed using the convenience opening feature.

Possible causes:

- The SmartKey battery is weak or discharged.
- Check the battery using the indicator lamp $(\rightarrow page 68)$.
- Replace the SmartKey battery, if necessary $(\rightarrow page 70)$.

Sliding sunroof

Opening and closing the sliding sunroof

- i) The term "sliding sunroof" also refers to the panoramic sliding sunroof.
- ▲ WARNING Risk of becoming trapped when the sliding sunroof is being opened and closed

Body parts may become trapped in the range of movement.

- During opening and closing, make sure that no body parts are in the range of movement.
- Release the button immediately if somebody becomes trapped.

or

 Briefly press the button in any direction during automatic operation. The opening or closing process will be stopped.

WARNING Risk of becoming trapped if the sliding sunroof is operated by children

Children operating the sliding sunroof could get caught in the moving parts, particularly if unattended.

- Never leave children unattended in the vehicle.
- ► When leaving the vehicle, always take the key with you and lock the vehicle.

WARNING Risk of becoming trapped when the roller sunblind is being opened and closed

Body parts may become trapped between the roller sunblind and frame or sliding roof.

- When opening or closing, make sure that no body parts are in the roller sunblind's range of movement.
- Release the button immediately if somebody becomes trapped.

or

 Briefly press the button in any direction during automatic operation. The opening or closing process will be stopped.

NOTE Malfunction due to snow and ice

Snow and ice may cause the sliding sunroof to malfunction.

Open the sliding sunroof only if it is free of snow and ice.

NOTE Damage caused by protruding objects

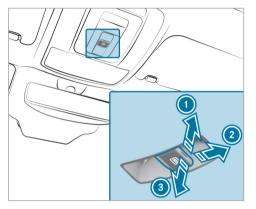

Objects that protrude from the sliding sunroof may damage the seals.

- Do not allow anything to protrude from the sliding sunroof.
- I NOTE Damage to the panorama roof with power tilt/sliding panel due to nonapproved roof luggage racks

The panorama roof with power tilt/sliding panel may be damaged by the roof luggage rack if you attempt to open it when using a roof luggage rack not tested and approved for Mercedes-Benz.

When a roof luggage rack is installed, open the panorama roof with power tilt/ sliding panel only if this has been tested and approved for Mercedes-Benz.

The panorama roof with power tilt/sliding panel may be raised to allow ventilation of the vehicle interior.

- Raises
- 2 Opens
- 3 Closes/lowers

Use the button to operate the panoramic sliding sunroof.

The panoramic sliding sunroof can be operated only when the roller sunblind is open.

- Check whether the sliding sunroof can be raised or opened when a roof luggage rack is installed.
- To start automatic operation: press the start automatic operation: press the start automatic operation beyond the point of resistance or pull and release it.
- To interrupt automatic operation: briefly press the i button in any direction. The opening/closing process will be stopped.

Vehicles with a panoramic sliding sunroof: The automatic raising feature is available only when the sliding sunroof is closed or raised.

Automatic reversing function of the sliding sunroof

If an obstacle obstructs the sliding sunroof during the closing process, the sliding sunroof will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

During the closing process, make sure that no body parts are in the closing area.

WARNING Risk of becoming trapped
 despite the reversing function being active

In particular, the reversing function does not react:

- To soft, light and thin objects, e.g. fingers.
- Towards the end of the closing procedure.
- During resetting.
- During the closing process, make sure that no body parts are in the closing area.
- Release the button immediately if somebody becomes trapped.
- or
- Briefly press the button in any direction during automatic operation.
 - The closing process will be stopped.

Automatic reversing function of the roller sunblind

If an obstacle obstructs the roller sunblind during the closing process, the roller sunblind will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness. When closing the roller sunblind, make sure that no body parts are in the range of movement.

WARNING Risk of becoming trapped despite reversing function

In particular, the reversing function does not react to soft, light and thin objects, e.g. fingers.

- When closing the roller sunblind, make sure that no body parts are in the range of movement.
- Release the button immediately if somebody becomes trapped.
- or
- Briefly press the button in any direction during the automatic closing process. The closing process will be stopped.

Automatic functions of the sliding sunroof

(i) The term "sliding sunroof" also refers to the panorama roof with power tilt/sliding panel.

Rain closing function when driving Vehicles with a panorama roof with power tilt/ sliding panel: If it starts to rain, the raised sliding sunroof will automatically be lowered while the vehicle is in motion.

Automatic lowering function

Vehicles with a panorama roof with power tilt/ sliding panel: If the sliding sunroof is raised at the rear, it will automatically be lowered slightly at higher speeds. At low speeds, it will be raised again automatically.

WARNING Risk of becoming trapped by automatic lowering of the sliding sunroof

At higher speeds, the raised sliding sunroof will automatically be lowered slightly at the rear.

- Make sure that nobody reaches into the sliding sunroof's range of movement while the vehicle is in motion.
- If somebody becomes trapped, briefly push the sliding sunroof button forwards or backwards.

(i) By pushing or pulling the []] button, you can interrupt the automatic functions "Rain closing function when driving" and "Automatic lowering".

Rectifying problems with the sliding sunroof

▲ WARNING Risk of becoming trapped or fatal injuries when the sliding sunroof is closed again

If the sliding sunroof is closed again immediately after it has been blocked or reset, it will close with increased force.

- Make sure that no parts of the body are in the closing area.
- Release the button immediately if somebody becomes trapped.
- or
- Briefly press the button in any direction during the automatic closing process. The closing process will be stopped.

The sliding sunroof cannot be closed and you cannot see the cause.

(i) The term "sliding sunroof" also refers to the panorama roof with power tilt/sliding panel.

If the sliding sunroof is obstructed during closing and reopens again slightly:

 Immediately after automatic reversing, pull and hold the []] button down again to the point of resistance until the sliding sunroof is closed.

The sliding sunroof will be closed with increased force.

If the sliding sunroof is obstructed again and opens again slightly:

 Repeat the previous step. The sliding sunroof will be closed again with increased force.

Vehicles with a panorama roof with power tilt/ sliding panel: The sliding sunroof or the roller sunblind is not operating smoothly.

Reset the sliding sunroof and the roller sunblind.

Resetting the sliding sunroof and the roller sunblind

- Pull and hold the button little by little until the sliding sunroof is fully closed.
- Pull and hold the button little by little until the roller sunblind is fully closed.
- Use automatic operation to fully open and then close the sliding sunroof.

Anti-theft protection

Function of the immobilizer

The immobilizer prevents your vehicle from being started without the correct SmartKey.

The immobilizer is automatically activated when the vehicle is switched off, and deactivated when the vehicle is switched on.

When leaving the vehicle, always take the Smart-Key with you and lock the vehicle. Anyone can start the vehicle if a valid SmartKey has been left inside the vehicle.

(i) In the event that the engine cannot be started (yet the vehicle's battery is charged), the system is not operational. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERCedes (in the USA) or 1-800-387-0100 (in Canada).

ATA (anti-theft alarm system)

Function of the ATA system

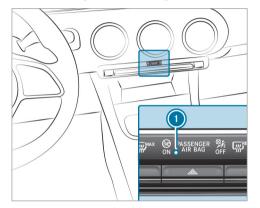

If the ATA system is armed, a visual and audible alarm is triggered in the following situations:

- When a door is opened
- · When the tailgate is opened
- When the hood is opened
- When the interior motion sensor is triggered (→ page 89)
- When the tow-away alarm is triggered
 (→ page 89)

The ATA system is armed automatically after approximately ten seconds in the following situations:

• After locking the vehicle with the SmartKey

• After locking the vehicle using KEYLESS-GO

Indicator lamp ① flashes when the ATA system is armed.

The ATA system is deactivated automatically in the following situations:

- After unlocking the vehicle with the SmartKey
- After unlocking the vehicle using KEYLESS-GO

- After pressing the start/stop button with the SmartKey in the marked space (\rightarrow page 146)
- When the Mercedes-Benz emergency call system is active and the alarm stays on for more than 30 seconds, a message is automatically sent to the Customer Assistance Center (→ page 271).
- In the case of severe battery discharging, the anti-theft alarm system is automatically deactivated to facilitate the next engine start.

Deactivating the ATA

Press the 🔒, 🖶 or 🚮 button on the SmartKey.

or

Press the start/stop button with the SmartKey in the stowage compartment (\rightarrow page 146)

Deactivating the alarm using KEYLESS-GO

• Grasp the outside door handle with the Smart-Key outside the vehicle.

Function of the tow-away alarm

(i) This function may not be available in all countries.

An audible and visual alarm is triggered if an alteration to your vehicle's angle of inclination is detected while the tow-away alarm is armed.

The tow-away alarm is automatically armed after approximately 60 seconds:

- After locking the vehicle with the SmartKey
- After locking the vehicle using KEYLESS-GO

The tow-away alarm is only armed when the following components are closed:

- Doors
- Tailgate

The tow-away alarm is automatically deactivated:

- After pressing the ∂ or ♂ button on the SmartKey
- After pressing the start/stop button with the SmartKey in the marked space (→ page 146)
- After unlocking the vehicle using KEYLESS-GO
- When using HANDS-FREE ACCESS

Information on collision detection on a parked vehicle (\rightarrow page 179).

Arming/disarming the tow-away alarm

Multimedia system:

→ 🔂 > Settings > Quick Access

Arm or disarm Tow-away Protection.

The tow-away alarm is armed again in the following cases:

- The vehicle is unlocked again.
- A door is opened.
- The vehicle is locked again.
- (i) If quick access is unavailable, select the Vehicle submenu in the Settings main menu to arm or disarm the tow-away alarm.

Function of the interior motion sensor

(i) This function may not be available in all countries.

When the interior motion sensor is activated, a visual and audible alarm is triggered if movement is detected in the vehicle interior.

The interior motion sensor is activated automatically after approximately ten seconds:

- After locking the vehicle with the SmartKey
- After locking the vehicle using KEYLESS-GO

The interior motion sensor is only activated when the following components are closed:

- Doors
- Tailgate

The interior motion sensor is automatically deactivated:

- After pressing the ∂ or ♂ button on the SmartKey
- After pressing the start/stop button with the SmartKey in the marked space (→ page 146)
- After unlocking the vehicle using KEYLESS-GO
- When using HANDS-FREE ACCESS

The following situations can lead to a false alarm:

- When there are moving objects such as mascots in the vehicle interior
- When a side window is open
- When a panoramic sliding sunroof is open

Arming/deactivating the interior motion sensor

Multimedia system:

- → 🕞 > Settings >> Quick Access
- Activate or deactivate Interior Motion Sensor.

The interior motion sensor is activated again in the following cases:

- The vehicle is unlocked again.
- A door is opened.
- The vehicle is locked again.
- (i) If quick access is unavailable, select the Vehicle menu under Settings to activate or deactivate the interior motion sensor.

Notes on the correct driver's seat position

 WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- If you fasten your seat belt while the vehicle is in motion
- Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

Ensure the following when adjusting the steering wheel (0), seat belt (2) and driver's seat (3):

- You are sitting as far away from the driver's airbag as possible, taking the following points into consideration:
- You are sitting in an upright position
- Your thighs are slightly supported by the seat cushion

- Your legs are not fully extended and you can depress the pedals properly
- The back of your head is supported at eye level by the center of the head restraint
- You can hold the steering wheel with your arms slightly bent
- You can move your legs freely
- You can see all the displays on the instrument cluster clearly
- You have a good overview of the traffic conditions
- Your seat belt sits snugly against your body and passes across the center of your shoulder and across your hips in the pelvic area

Notes on the height limit on the third row of seats

WARNING Risk of injury if height limit on the third row is not observed

If a person exceeds the permissible body size for the seats in the third row of seats, he or she may be injured through contact with the roof or parts of the vehicle interior.

For that reason, a person of the relevant height must not use the seats on the third row.

Use a suitable vehicle seat.

The seats on the third row are approved only for people up to 66.1 in (1.68 m) in height. Observe the information regarding height on the information label.

Seats

Adjusting the front seat mechanically (without Seat Comfort Package)

WARNING Risk of becoming trapped if the seats are adjusted by children

Children could become trapped if they adjust the seats, particularly when unattended.

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Never leave children unattended in the vehicle.

WARNING Risk of becoming trapped when adjusting the seat

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail.

When adjusting a seat, make sure that no one has any part of their body within the sweep of the seat.

Observe the safety notes on "Airbags" and "Children in the vehicle".

WARNING Risk of accident due to the driver's seat not being engaged

The driver's seat may move unexpectedly while driving.

This could cause you to lose control of the vehicle.

Always make sure that the driver's seat is engaged before starting the vehicle. ▲ WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- If you fasten your seat belt while the vehicle is in motion
- Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.
- WARNING Risk of becoming trapped if the seat height is adjusted carelessly

If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured. Children in particular could accidentally press the electrical seat adjustment buttons and become trapped.

While moving the seats, make sure that hands or other body parts do not get under the lever assembly of the seat adjustment system.

WARNING Risk of injury due to head restraints not being installed or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- Always drive with the head restraints installed.
- Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

WARNING Risk of injury or death due to an incorrect seat position

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.

In particular, you could slip beneath the seatbelt and become injured.

- Adjust the seat properly before beginning your journey.
- Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.

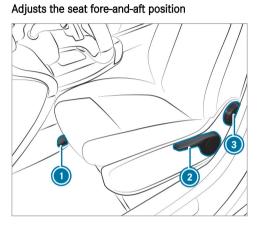

WARNING Risk of injury due to excessive strain on the grab handle

If you apply your full body weight to the grab handle or pull it abruptly, the grab handle may be damaged or become loose from its anchorage.

- Use the grab handles only to stabilize the seating position or to assist in getting in and out of the seat.
- WARNING Risk of injury or death due to objects under the co-driver seat

Objects trapped under the co-driver seat can interfere with the function of the automatic co-driver airbag shutoff or damage the system.

- Do not store any objects under the codriver seat.
- When the co-driver seat is occupied, make sure that no objects are trapped under the co-driver seat.

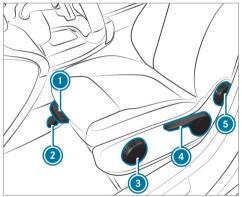

- Lift lever ① and slide the seat into the desired position.
- Make sure that the seat is engaged.
- To adjust the seat height: push or pull lever (2) until the desired position has been reached.

To adjust the seat backrest inclination: turn handwheel () forwards and backwards until the desired position has been reached.

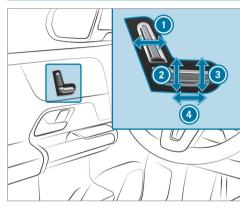

Adjusting the front seat mechanically (with Seat Comfort Package)

Adjusts the seat fore-and-aft position

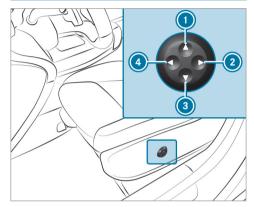

- Lift lever ② and slide the seat into the desired position.
- Make sure that the seat is engaged.
- To adjust the seat cushion inclination: turn handwheel (a) forwards and backwards until the desired position has been reached.
- To adjust the seat height: push or pull lever until the desired position has been reached.
- To adjust the seat backrest inclination: turn handwheel () forwards and backwards until the desired position has been reached.

Adjusting the front seat electrically

- Seat backrest inclination
- 2 Seat height
- Seat cushion inclination
- Seat fore-and-aft position
- Save the settings with the memory function $(\rightarrow \text{ page 106}).$

Adjusting the 4-way lumbar support

- Higher
 Softer
 Lower
 Firmer
 Use buttons

 to

 to adjust
- Use buttons (1) to (3) to adjust the contour of the backrest.

Adjusting rear seats mechanically

WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

- When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.
- WARNING Risk of accident if the seat and seat backrest are not engaged

The seat and seat backrest can fold forwards.

There is a risk of the following, in particular:

- The vehicle occupant may be pressed against the seat belt. The seat belt cannot protect as intended and could cause additional injury.
- A child restraint system will no longer be properly supported or positioned and will no longer fulfill its function as intended.

• The seat backrest will not be able restrain objects or goods in the cargo compartment.

Always ensure that the seat and seat backrest are engaged, in particular:

- Before persons travel in the vehicle while sitting on a seat with the easy entry and exit feature
- After the seat has been adjusted.
- After the easy entry and exit feature has been used
- After the cargo compartment enlargement has been folded forwards
- WARNING Risk of injury from adjusting the rear seats while driving

You or other vehicle occupants could be trapped and thereby injured.

Adjust the rear seats before starting the drive system.

! NOTE Damage caused by objects in the footwell or behind the rear seats

When adjusting the fore-and-aft position, the rear seats and/or the object can be damaged.

Stow objects in a suitable place.

This function is available only for vehicles with a movable rear bench seat.

The components of the rear bench seat can be moved. You can move the right-hand and left-hand parts together with the center part independently of each other. This allows you to make the footwell larger in either the second or third row of seats.

- Lift release handle ① and slide the corresponding part of the bench seat into the desired position.
- Let go of release handle ①.
- Make sure that the seat is engaged.

Adjusting the rear seat backrests mechanically

WARNING Risk of injury due to seat backrests folded forwards

If the seat backrest of the rear seat is folded forwards, persons in the third row of seats may hit parts of the seat mechanism, especially in the event of an accident, braking maneuver or abrupt change of direction.

- If there is a person in the third row of seats, the rear seat in front of them must be folded back to the driving position before the journey begins.
- Persons in the third row of seats should not rest their legs on a seat backrest that has been folded forwards.

You can fold the backrests of the second row of seats forwards to get in or out.

WARNING Risk of becoming trapped if the seat is not engaged

The seat does not engage when folded forwards. The seat can fold backwards unexpectedly, e.g. when accelerating, braking or in the event of an abrupt change of direction or an accident.

People in the seat's sweep can become trapped.

- If a seat is folded forwards, always fold it back before driving off.
- Make sure that the seat is engaged.

Requirements:

• The area into which the seat is folded is clear.

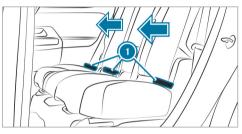

Adjusting the seat backrest

You can fold the seat backrests on the second row of seats forwards for the following situations:

- For easier access to the cargo compartment
- Vehicles with a third row of seats: for getting in or out

You can set the seat backrest to different angles.

If you no longer require the seat backrest to be folded down for loading or for getting in and out, fold it back into place.

- Hold the seat backrest in place with your hand or back.
- Gently pull one of release loops () and fold the seat backrest forwards or backwards.
- Ensure that the seat backrest is engaged.

Folding the seat backrest forwards to enter the vehicle (vehicles with a third row of seats)

 WARNING Risk of injury when folding the seat backrest on the second row of seats forwards

If the handle for the seat backrest on the second row of seats is pulled from the third row of seats, the seat backrest on the second row of seats will fold forwards and will not engage. People in the sweep of this seat backrest can become trapped.

When getting out of the third row of seats, do not hold the seat backrest on the second row of seats.

Vehicles with EASY-ENTRY function: If a seat on the second row of seats is located in the EASY-ENTRY area, this will be shown on the multifunction display on the instrument cluster.

If necessary, fold the seats on the third row into position (\rightarrow page 114).

- Pull handle ①.
 The seat backrest will fold forwards.
- **!** NOTE Damage to the seat backrest handle caused by pulling

The handle can be damaged if it is used to pull the seat forwards.

- Move the seat forwards by the seat backrest.
- Move the seat forwards by the seat backrest. Hold the seat firmly in place while doing so.

Folding the seat backrest back to the upright position (vehicles with third row of seats)

- Swivel seat backrest back until it engages. The seat backrest will remain in the cargo position.
- Slide the seat backwards. The seat will stop in the front position.
- Move the seat into the desired position $(\rightarrow page 96)$.
- If necessary, fold in the seats on the third row $(\rightarrow \text{ page } 112)$.
- To increase the size of the cargo compartment, you can move the seat backrests into the cargo compartment floor position
 (→ page 109).

Head restraints

Adjusting the front seat head restraints manually

▲ WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- If you fasten your seat belt while the vehicle is in motion
- Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

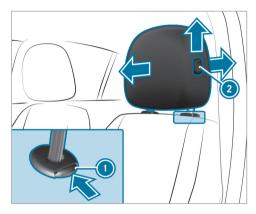

WARNING Risk of injury due to head restraints not being installed or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- Always drive with the head restraints installed.
- Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

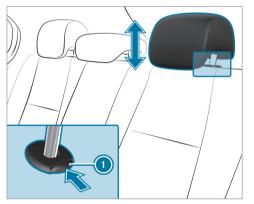

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

- **To raise:** pull the head restraint up.
- To lower: press release knob () in the direction of the arrow and push the head restraint down.
- To move the driver's head restraint forwards: press release knob ② and pull the head restraint forwards.

 To move the driver's head restraint backwards: press release knob (2) and push the head restraint backwards.

Adjusting the head restraints of the rear seats mechanically

To raise: pull the head restraint up.

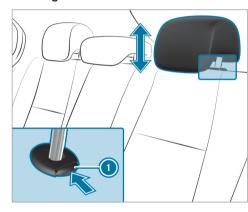

- To lower: press release knob () in the direction of the arrow and push the head restraint down.
- If the center seat on the second row of seats is not occupied: press the head restraint down all the way.

Vehicles with a third row of seats

The head restraints on the third row of seats have a usage position and a non-usage position. The usage position is the extended, top position in which the head restraint engages; the non-usage position is the bottom, retracted position of the head restraint. If the seats on the third row of seats are being used, the head restraint must be in the top, engaged usage position.

- If the third row of seats is occupied: move the head restraints to the very top and have them engage there.
- If the third row of seats is not occupied: move the head restraints to the very bottom.

Installing/removing the rear seat head restraints Removing

- Release the rear seat backrest and fold it forwards slightly (\rightarrow page 109).
- Pull the head restraint upwards as far as it will go.
- Push release knob () in the direction of the arrow and pull out the head restraint.

Installing

- Insert the head restraint such that the notches on the bar are on the left when viewed in the direction of travel.
- Push the head restraint down until it engages.
- Fold the rear seat backrest back until it engages.

Configuring the seat settings

Multimedia system:

→ 🞧 🕨 Comfort 🍽 Seat Comfort

Adjusting the backrest contour in the lumbar region of the seat backrest (lumbar)

- Select Lumbar.
- Select the settings 🚺 for the desired seat.
- Adjust the air cushions.

Adjusting the backrest side bolsters

- Select Side Bolsters.
- Adjust the air cushion for the desired seat.

Selecting the massage program for the front seats

Multimedia system:

- → 🕞 > Comfort > Massage
- Select Wave Massage or Pulsating Massage.
- Start the program for the desired seat
- To set the massage intensity: switch High Intensity on or off.

Resetting seat settings

Multimedia system:

- → 🕞 >> Comfort >> Seat Comfort
- Select for the desired seat.
- Confirm the prompt.

Switching the seat heating on/off

WARNING Risk of burns due to repeatedly switching on the seat heating

Repeatedly switching on the seat heating can cause the seat cushion and seat backrest padding to become very hot.

1

In particular, the health of persons with limited temperature sensitivity or a limited ability to react to high temperatures may be affected or they may even suffer burn-like injuries.

Do not repeatedly switch on the seat heating.

To protect against overheating, the seat heating may be temporarily deactivated after it has been switched on repeatedly.

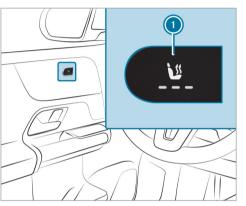

NOTE Damage to the seats caused by objects or documents when the seat heating is switched on

When the seat heating is switched on, overheating may occur due to objects or documents placed on the seats, e.g. seat cushions or child seats. This could cause damage to the seat surface.

Make sure that no objects or documents are on the seats when the seat heating is switched on.

Requirements:

• The power supply is switched on.

Press button ① repeatedly until the desired heating level is set.

Depending on the heating level, up to three indicator lamps will light up. If all indicator lamps are off, the seat heating is switched off.

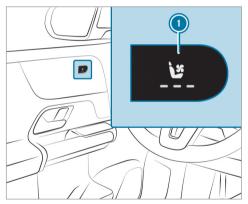

(i) The seat heating will automatically switch down from the three heating levels after 8, 10

and 20 minutes until the seat heating switches off.

Switching the seat ventilation on/off

Requirements:

• The power supply is switched on.

Press button **()** repeatedly until the desired blower setting has been reached. Depending on the blower setting, up to three indicator lamps will light up. If all indicator lamps are off, the seat ventilation is switched off.

Steering wheel

Adjusting the steering wheel mechanically

▲ WARNING Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- If you fasten your seat belt while the vehicle is in motion
- Before starting the vehicle: in particular, adjust the driver's seat, head restraint,

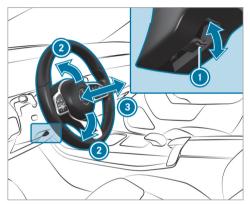

steering wheel and mirror, and fasten your seat belt.

WARNING Risk of entrapment for children when adjusting the steering wheel

Children could injure themselves if they adjust the steering wheel.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

Unlocking

- Fold release lever ① down as far as it will go.
- Adjust height ② and distance ③ to the steering wheel.

Locking

 Check and make sure that the steering column is locked by moving the steering wheel.

Switching the steering wheel heater on/off

Requirements:

• The vehicle is switched on.

Push the switch into position ① or ②. If indicator lamp ③ lights up, the steering wheel heater is switched on.

When you switch the vehicle off, the steering wheel heater will switch off.

Easy entry and exit feature

Using the easy entry and exit feature

- ▲ WARNING Risk of accident when pulling away during the adjustment process of the easy entry and exit feature
- You could lose control of the vehicle.
- Always wait until the adjustment process is complete before driving off.
- WARNING Risk of becoming trapped during adjustment of the easy entry and exit feature

You and other vehicle occupants could become trapped.

Ensure that no-one has any body parts in the range of movement of the seat.

If there is a risk of becoming trapped by the driver's seat:

Press the seat adjustment switch. The adjustment process will be stopped.

You can stop the adjustment process by pressing one of the memory function position switches.

 WARNING Risk of becoming trapped if children activate the easy entry and exit feature-

Children could become trapped if they activate the easy entry- and exit feature, particularly when unattended.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

When the easy entry and exit feature is active, the driver's seat will move backwards and the back-rest will be moved to a steeper position when:

- You switch the ignition off when the driver's door is open
- You open the driver's door when the ignition is switched off
- (i) The driver's seat will then move backwards only if it is not already at the rear of the seat adjustment range.

The seat backrest will then move forwards only if it is not already at the front of the backrest adjustment range.

The driver's seat will move back to the last drive position when:

- You switch the ignition on with the driver's door closed.
- You close the driver's door when the ignition is switched on

The last drive position will be saved when:

• You switch the ignition off.

- You call up the seat settings via the memory function.
- You save the seat settings via the memory function.

Setting the easy entry and exit feature

Multimedia system:

- → 🕞 >> Settings >> Vehicle
- ➤ Automatic Seat Adjustment
- ► Easy Entry/Exit
- Activate or deactivate the function.

Memory function

Function of the memory function

WARNING Risk of an accident if the memory function is used while driving

If you use the memory function on the driver's side while driving, you could lose control of the vehicle as a result of the adjustments being made.

- Only use the memory function on the driver's side when the vehicle is stationary.
- WARNING Risk of entrapment when adjusting the seat with the memory function

When the memory function adjusts the seat, you and other vehicle occupants – particularly children – could become trapped.

- During the adjustment process of the memory function, make sure that no one has any body parts in the sweep of the seat.
- If someone becomes trapped, press a preset position button or seat adjustment switch immediately.
- **WARNING** Risk of entrapment if the memory function is activated by children

Children could become trapped if they activate the memory function, particularly when unattended.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

You can use the memory function when the ignition is switched off.

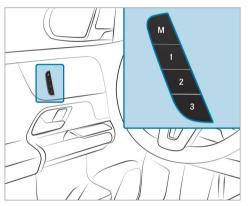

Seat adjustments for up to three people can be stored and called up using the memory function.

You can save settings for the following systems:

- Seat
- Seat contour
- Outside mirrors
- Head-up Display

Operating the memory function

Storing

- > Set the desired position for all systems.
- Briefly press memory button M and then press preset position 1, 2 or 3 within three seconds.

To call up: press and briefly hold one of preset position buttons 1, 2 or 3. After releasing the button, all systems are moved into the stored position.

Stowage areas

Notes on loading the vehicle

WARNING Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects in such a way that they cannot be thrown around.
- Before the journey, secure objects, luggage or loads against slipping or tipping over.

WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open storage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or abrupt changes in direction.

- Always store objects such that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from storage spaces, parcel nets or storage nets.
- Close the lockable storage spaces before starting a journey.
- Stow and secure objects that are heavy, hard, pointed, sharp-edged, fragile or too large in the cargo compartment.

 WARNING Risk of accident from objects in the driver's footwell and front-passenger footwell

Objects in the driver's footwell and frontpassenger footwell may impede pedal travel or block a depressed pedal.

This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell or front-passenger footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient clearance for the pedals.
- Do not use loose floor mats and do not lay multiple floor mats on top of one another.

Vehicles with automatic front passenger airbag

shutoff: Objects trapped under the front passenger seat may interfere with the function of the automatic front passenger airbag shutoff or damage the system. Please observe the notes on the function of the automatic front passenger airbag shutoff (\rightarrow page 48).

 WARNING - Risk of accident or injury when using the cup holder while the vehicle is moving

The cup holder cannot secure containers while the vehicle is moving.

If you use a cup holder while the vehicle is moving, the container may be flung around and liquids may be spilled. The vehicle occupants may come into contact with the liquid and if it is hot, they could be scalded. You could be distracted from traffic conditions and you may lose control of the vehicle.

- Only use the cup holder when the vehicle is stationary.
- Only use the cup holder for containers of the right size.
- Close the container, particularly if the liquid is hot.

NOTE Damage to the cup holder

When the rear armrest is folded back the cup holder could become damaged.

- Only fold the rear armrest back when the cup holder is closed.
- I NOTE Damage to the rear armrest due to body weight

When folded out, the rear armrest can be damaged by body weight.

- Do not sit or support yourself on the rear seat armrest.
- **WARNING** Risk of injury due to an open cargo compartment floor

If you drive with the cargo compartment floor open, objects could be flung around and hit vehicle occupants as a result. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

Always close the cargo compartment floor before a journey.

WARNING - Risk of fire and injury from hot cigarette lighter

You can burn yourself if you touch the hot heating element or the socket of the cigarette lighter.

In addition, flammable materials may ignite if:

- you drop the hot cigarette lighter
- a child holds the hot cigarette lighter to objects, for example
- Always hold the cigarette lighter by the knob.
- Always make sure that the cigarette lighter is out of reach of children.
- Never leave children unattended in the vehicle.

The driving characteristics of your vehicle are dependent on the distribution of the load within the vehicle. You should bear the following in mind when loading the vehicle:

• Never exceed the permissible gross mass or the gross axle weight rating for the vehicle

(including occupants). The values are specified on the vehicle identification plate on the vehicle's B-pillar.

- The load must not protrude above the upper edge of the seat backrests.
- Always use the partitioning net when transporting objects in the cargo compartment.
- Always place the load behind unoccupied seats if possible.
- Secure the load using the tie-down eyes and distribute the load evenly.

Notes on driving with a roof load

- Evenly distribute the roof load, and place heavy objects at the bottom. Also comply with the notes on loading the vehicle.
- Drive attentively, and avoid suddenly pulling away, braking and steering as well as rapid cornering.

(i) For more information on stowage compartments and stowage areas, please refer to the Digital Operator's Manual.

Stowage spaces in the vehicle interior

Overview of the front stowage compartments

- Stowage spaces in the doors
- Stowage compartment in the armrest with a multimedia and USB connection
- Stowage compartment in the front center console with a USB port
- Glove box

Through-loading feature in the rear bench seat (EASY-PACK Quickfold)

Folding the rear seat backrest forwards

▲ WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

- When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.
- WARNING Risk of becoming trapped if the seat is not engaged

The seat does not engage when folded forwards. The seat can fold backwards unexpectedly, e.g. when accelerating, braking or in the event of an abrupt change of direction or an accident.

People in the seat's sweep can become trapped.

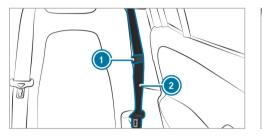

- If a seat is folded forwards, always fold it back before driving off.
- Make sure that the seat is engaged.

Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly. Particular attention must be paid to children.

If you no longer require the folded-down seat backrest as a loading area, fold the backrest back into place.

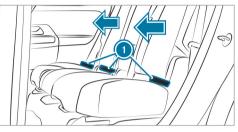

Requirements:

- The area into which the seat is folded is clear.
- The area under the rear bench seat is clear.
- The armrest on the second row of seats is folded back and the cup holders are empty.

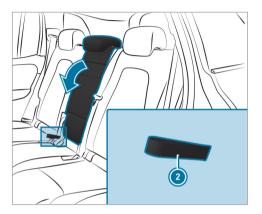

Trap the seat belt strap on seat belt ② in seat belt strap holder ①.

When the left-hand seat backrest is folded forwards, the center seat backrest will also be folded forwards.

- Move the driver's seat forwards.
- If necessary, release the head restraints for the seat backrest and push them down as far as possible (→ page 100).
- Left and right seat backrests: pull one of release loops ①.

The seat backrest will automatically fold forwards.

 Center seat backrest: pull release loop (2). The seat backrest will automatically fold forwards.

(i) When the seat backrests on the second and third rows of seats are folded forwards, you can push the rear bench seat on the second row of seats back. This will then provide a continuous cargo compartment surface. Ensure that the area between the rows of seats is clear.

Folding back the rear seat backrest

WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

- When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.
- ▲ WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.

- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.
- Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the rear seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

NOTE Damage caused by trapping the seat belt when folding back the seat back-rest

The seat belt could become trapped and thus damaged when the seat backrest is folded back.

Make sure that the seat belt is not trapped when folding back the seat backrest.

If the left and center seat backrests have been folded forwards together, fold the left seat backrest back first.

- Move the driver's or front passenger seat forwards, if necessary.
- Swivel seat backrest

 back until it engages.
 The seat backrest will remain in the cargo position.
- After the seat backrest has been folded back, check the position of the head restraint and set it to the correct position (\rightarrow page 100).

Folding the seat backrest on the third row of seats forwards

WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.

WARNING Risk of accident if the seat and seat backrest are not engaged

The seat and seat backrest can fold forwards.

There is a risk of the following, in particular:

- The vehicle occupant may be pressed against the seat belt. The seat belt cannot protect as intended and could cause additional injury.
- A child restraint system will no longer be properly supported or positioned and will no longer fulfill its function as intended.

• The seat backrest will not be able restrain objects or goods in the cargo compartment.

Always ensure that the seat and seat backrest are engaged, in particular:

- Before persons travel in the vehicle while sitting on a seat with the easy entry and exit feature
- After the seat has been adjusted.
- After the easy entry and exit feature has been used
- After the cargo compartment enlargement has been folded forwards

WARNING Risk of injury due to seat backrests folded forwards

If the seat backrest of the rear seat is folded forwards, persons in the third row of seats may hit parts of the seat mechanism, especially in the event of an accident, braking maneuver or abrupt change of direction.

- If there is a person in the third row of seats, the rear seat in front of them must be folded back to the driving position before the journey begins.
- Persons in the third row of seats should not rest their legs on a seat backrest that has been folded forwards.

Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly. Particular attention must be paid to children.

You can fold the backrests of the second row of seats forwards to get in or out.

WARNING Risk of becoming trapped if the seat is not engaged

The seat does not engage when folded forwards. The seat can fold backwards unexpectedly, e.g. when accelerating, braking or in the event of an abrupt change of direction or an accident.

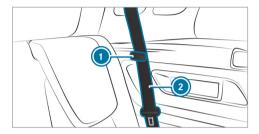

People in the seat's sweep can become trapped.

- If a seat is folded forwards, always fold it back before driving off.
- Make sure that the seat is engaged.

Requirements:

- The area into which the seat is folded is clear.
- The area under the third row of seats is clear.
- The cup holders are empty when the seat backrests on the third row of seats are folded forwards.
- The cargo compartment cover is removed when the seat backrests on the second row of seats are folded forwards.

If you no longer require the folded-down seat backrest as a loading area, fold the backrest back into place.

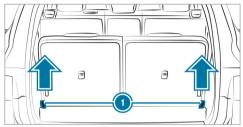

- Trap the seat belt strap on seat belt ② in seat belt strap holder ①.
- **!** NOTE Damage to the release loops due to the attachment of objects

The release loops of the seat backrests in the rear passenger compartment may be damaged due to the attachment of objects.

Only attach objects to the tie-down eyes.

The release loops are located in the cargo compartment to the side of the bottom part of the seat backrests.

Release loops on the rear sides

- Move the second row of seats forwards and move the seat backrests into the cargo position (→ page 115).
- Release the head restraints on the third row of seats and push them down (
 → page 100).
- Pull one of red release loops ①.
 The seat backrest will automatically fold forwards.
- Push the seat backrest down until it engages.

(i) When the seat backrests on the second and third rows of seats are folded forwards, you can push the rear bench seat on the second row of seats back. This will then provide a continuous cargo compartment surface. Ensure that the area between the rows of seats is clear.

Folding back the seat backrest on the third row of seats

WARNING Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

When adjusting a seat, make sure that no one has any body parts in the sweep of the seat. WARNING Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.

- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.
- Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

NOTE Damage caused by trapping the seat belt when folding back the seat back-rest

The seat belt could become trapped and thus damaged when the seat backrest is folded back.

Make sure that the seat belt is not trapped when folding back the seat backrest.

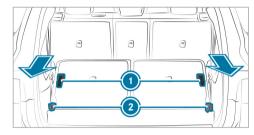

Requirements:

 The seats and the seat backrests on the second row of seats have been moved forwards sufficiently.

! NOTE Damage to the release loops due to the attachment of objects

The release loops of the seat backrests in the rear passenger compartment may be damaged due to the attachment of objects.

Only attach objects to the tie-down eyes.

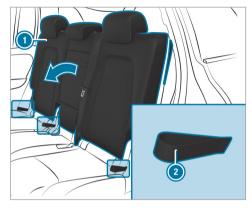

Loops on the rear sides

- Briefly pull one of red release loops 2.
- ► To fold the left or right seat backrest back: pull one of black release loops ①.

Adjusting the angle of the rear seat backrests (cargo position)

To enlarge the cargo compartment, you can move the seat backrests on the second row of seats into a steeper angle (cargo position).

- To set the seat backrest: hold seat backrest
 in place with your hand or back.
- Gently pull one of release loops ② and fold the seat backrest forwards.

Cargo compartment cover

Notes on the cargo compartment cover

WARNING Risk of injury or death due to poorly secured objects

The cargo compartment cover alone cannot secure or restrain heavy objects, items of luggage or heavy loads.

You could be hit by an unsecured load, particularly in the event of abrupt changes in direction, sudden braking or an accident.

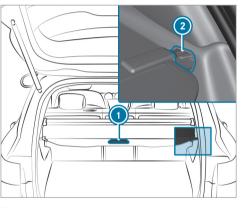

- Always stow objects in such a way that they cannot be thrown around.
- Secure objects, luggage or loads against slipping or tipping over, e.g. by using tie downs, even if you are using the cargo compartment cover.
- **!** NOTE Damage to the cargo compartment cover when loading the vehicle

The cargo compartment cover may be damaged when the vehicle is being loaded.

Do not place any objects above the lower edge of the side windows or on the cargo compartment cover.

Vehicles with a third row of seats: when the third row of seats is in use, the cargo compartment cover on the seat backrests on the second row of seats is removed.

Extending/retracting the cargo compartment cover

 To extend: pull the cargo compartment cover back by grab handle

 and clip it into holders
 on the left and right.

Retracting

 Release the cargo compartment cover from holders (2) on the left and right. Guide the cargo compartment cover forwards using grab handle ① until it is fully retracted.

Installing or removing the cargo compartment cover

Requirements:

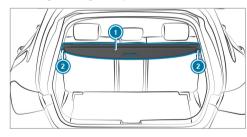

• The cargo compartment cover is rolled up.

Removing the cargo compartment cover

- Press in the end cap of cargo compartment cover () on the right- and left-hand side in the direction of the arrow using the handle on the lower edge ().
- Push cargo compartment cover ① into anchorage ② on the opposite side.
- Take cargo compartment cover ① out by pulling it upwards.

Installing the cargo compartment cover

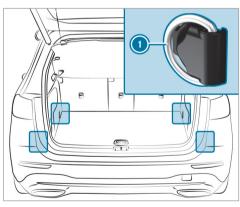

- Place cargo compartment cover ① in anchorage ② on the right- or left-hand side.
- Press in the end cap of cargo compartment cover ① on the opposite side and insert

cargo compartment cover (1) into other anchorage (2).

Overview of the tie-down eyes

Observe the notes on loading the vehicle $(\rightarrow page 106)$.

Tie-down eyes (vehicles with through-loading feature in the rear bench seat)

Overview of bag hooks

▲ WARNING Risk of injury when using bag hooks with heavy objects

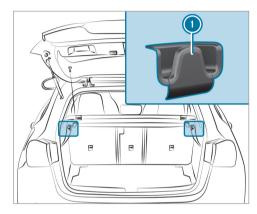

The bag hooks cannot restrain heavy objects or items of luggage.

Objects or items of luggage may be flung around and hit vehicle occupants.

- Only hang light objects on the bag hooks.
- Never hang hard, sharp-edged or fragile objects on the bag hooks.

Observe the notes on loading the vehicle $(\rightarrow page 106)$.

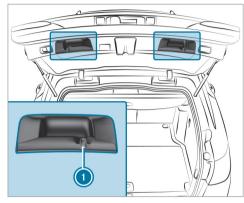

Subject the bag hooks to a maximum load of 6.6 lbs (3 kg) and do not attach any goods to them.

Overview of clothes hooks on the tailgate

Observe the notes on loading the vehicle (\rightarrow page 106).

Clothes hook

The clothes hooks are not suitable for hanging heavy objects as this can cause the tailgate to lower automatically. Use the clothes hooks only for light objects such as jackets.

Attaching a roof luggage rack

WARNING Risk of accident due to exceeding the maximum roof load

The vehicle center of gravity and the usual driving characteristics as well as the steering and braking characteristics alter.

If you exceed the maximum roof load, the driving characteristics, as well as steering and braking, will be greatly impaired.

Never exceed the maximum roof load and adjust your driving style.

You will find information on the maximum roof load in the "Technical data" section.

• NOTE Damage to the vehicle due to not observing the maximum permitted head-room clearance

If the vehicle height is greater than the maximum permitted headroom clearance, the roof and other parts of the vehicle may be damaged.

- Observe the signposted headroom clearance.
- If the vehicle height is greater than the permitted headroom clearance, do not enter.
- Observe the changed vehicle height with add-on roof equipment.
- NOTE Damage to the panorama roof with power tilt/sliding panel due to nonapproved roof luggage racks

The panorama roof with power tilt/sliding panel may be damaged by the roof luggage rack if you attempt to open it when using a roof luggage rack not tested and approved for Mercedes-Benz.

When a roof luggage rack is installed, open the panorama roof with power tilt/ sliding panel only if this has been tested and approved for Mercedes-Benz.

The panorama roof with power tilt/sliding panel may be raised to allow ventilation of the vehicle interior.

Notes on driving with a roof load

- Evenly distribute the roof load, and place heavy objects at the bottom. Also comply with the notes on loading the vehicle (→ page 106).
- Drive attentively, and avoid suddenly pulling away, braking and steering as well as rapid cornering.
- Secure the roof luggage rack to the roof railing.
- Observe the manufacturer's installation instructions.

Sockets

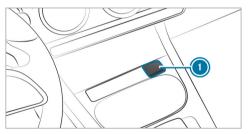

Using the 12 V socket

Requirements:

• Only devices up to a maximum of 180 W (15 A) are permissible.

Depending on the vehicle equipment, the vehicle has the following 12 V sockets:

- In the stowage compartment in the front center console
- In the stowage compartment under the front armrest
- In the cargo compartment

Example: 12 V socket in the stowage compartment in the front center console

- 🕨 Fold up socket cap 🕦.
- Insert the plug of the device.

12 V socket in the stowage compartment with

cover: if you have connected a device to the 12 V socket, leave the cover of the stowage compartment open.

Using the 115 V socket in the rear passenger compartment

 DANGER Risk of fatal injuries due to a damaged connecting cable or a damaged socket

You could receive an electric shock if the connecting cable or the 115 V power socket is pulled out of the trim or is damaged or wet.

- Use only connecting cables that are dry and free of damage.
- ▶ When the vehicle is switched off, make sure that the 115 V power socket is dry.
- Immediately have the 115 V power socket checked or replaced at a qualified specialized workshop if it is damaged or has been pulled out of the trim.

- Never plug the connecting cable into a 115 V power socket that is damaged or has been pulled out of the trim.
- **DANGER** Risk of death due to using the socket incorrectly

In particular, you could receive an electric shock:

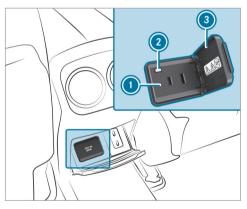

- If you touch the inside of the socket
- If you insert unsuitable devices or objects into the socket
- Do not touch the inside of the socket.
- Only connect suitable devices to the socket.

Make sure that no liquids get into the 115 V socket.

When the 115 V socket is not in use, keep the socket flap closed.

Requirements:

- The device is equipped with a suitable plug which conforms to the standards specific to the country you are in.
- A device up to a maximum of 150 W (1.3 A) is used.
- Do not use multiple socket outlets.

Insert the plug of the device into 115 V socket
 When the on-board electrical system voltage is sufficient, indicator lamp ② lights up.

Overview of USB ports

Depending on the vehicle equipment, the vehicle has the following USB ports:

- In the stowage compartment of the cockpit armrest (→ page 109)
- In the front center console next to the mobile phone stowage compartment
- In the rear center console
- Vehicles with three seat rows: in the side stowage compartment of the cargo compartment
- (i) Depending on the vehicle equipment, the design of the stowage compartment and the number of USB ports in the rear center console may vary.

When the vehicle is switched on, you can charge a USB device, such as a mobile phone, at the USB ports using a suitable charging cable.

Wireless charging of the mobile phone and connection with the exterior antenna

Notes on wirelessly charging the mobile phone

WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

Always stow objects so that they cannot be thrown around in such situations.

- Always make sure that objects do not protrude from stowage spaces, parcel nets or stowage nets.
- Close the lockable stowage spaces before starting a journey.
- Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the trunk/cargo compartment.

Observe the notes on loading the vehicle.

WARNING Risk of fire from placing objects in the mobile phone storage compartment

Placing other objects in the mobile phone storage compartment could constitute a fire hazard.

Apart from a mobile phone, do not place any other objects in the mobile phone storage compartment, especially those made of metal.

 NOTE Damage to objects caused by placing them in the mobile phone storage compartment

If objects are placed in the mobile phone storage compartment, these may be damaged by electromagnetic fields.

- Do not place credit cards, storage media, ski passes or other objects sensitive to electromagnetic fields in the mobile phone storage compartment.
- **!** NOTE Damage to the mobile phone stowage compartment caused by liquids

If liquids enter the mobile phone stowage compartment, the compartment may be damaged.

Ensure that no liquids enter the mobile phone stowage compartment.

The following notes on wirelessly charging the mobile phone must be observed:

- Depending on the vehicle equipment, the mobile phone is connected to the vehicle's exterior antenna via the charging module.
- The charging function and wireless connection of the mobile phone to the vehicle's exterior antenna are only available if the vehicle is switched on.
- Small mobile phones may not be able to be charged in every position of the mobile phone stowage compartment.
- Large mobile phones which do not rest flat in the mobile phone stowage compartment may not be able to be charged or connected with the vehicle's exterior antenna.
- The mobile phone may heat up during the charging process. This may particularly depend on the applications (apps) currently open in the background.
- To ensure more efficient charging and connection with the vehicle's exterior antenna, remove the protective cover from the mobile

phone. Protective covers which are necessary for wireless charging are an exception.

Charging a mobile phone wirelessly

Requirements:

• The mobile phone is suitable for wireless charging.

A list of compatible mobile phones can be found at: https://www.mercedes-benz-mobile.com.

Seats and stowing 123

- Place the mobile phone as close to the center of the marked surface on mat

 as possible with the display facing upwards.
 When a message is shown in the multimedia system, the mobile phone is being charged.
 Malfunctions during the charging process are shown in the central display.
- (i) The mat can be removed for cleaning, e.g. using clean, lukewarm water.

Stowage compartment without cover

Make sure the mobile phone is properly stored and secured to prevent it from falling out while you are driving.

To secure the mobile phone: swing lever out.

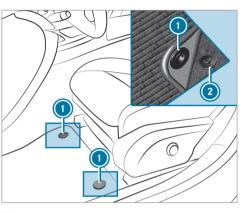

Installing/removing the floor mats

WARNING Risk of accident due to objects
 in the driver's footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal.

This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- Do not use loose floor mats and do not place floor mats on top of one another.

- To install: slide the corresponding seat backwards and lay the floor mat in the footwell.
- Press studs ① onto holders ②.
- Adjust the corresponding seat.
- To remove: slide the corresponding seat backwards and pull the floor mat off holders (2).
- Remove the floor mat.

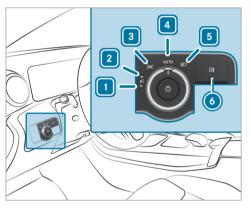

Exterior lighting

Information about lighting systems and your responsibility

The various lighting systems of the vehicle are only aids. The driver of the vehicle is responsible for correct vehicle illumination in accordance with the prevailing light and visibility conditions, legal requirements and traffic situation.

Light switch

Operating the light switch

- 1 ←**P** ∈ Left-hand standing lights
- **P**≤→ Right-hand standing lights 2
- Parking lights and license plate lamp 3
- 4 **AUTO** Automatic driving lights (preferred light switch position)

■D Low beam/high beam 5 6

0€ Switches the rear fog light on/off

When low beam is activated, the 2005 indicator lamp for the parking lights will be deactivated and replaced by the D low-beam indicator lamp.

- Always park your vehicle safely using sufficient lighting, in accordance with the relevant legal stipulations.
- ! **NOTE** Battery discharging by operating the standing lights

Operating the standing lights over a period of hours puts a strain on the battery.

▶ Where possible, switch on the right **P**<+ or left **←P** ≤ parking light.

If the battery is insufficiently charged, the standing lights or parking lights will be switched off automatically to facilitate the next drive system start.

The exterior lighting (except standing and parking lights) will switch off automatically when the driver's door is opened.

 Observe the notes on surround lighting (→ page 128).

Automatic driving lights function

When the vehicle is switched on, the parking lamps, low beam and daytime running lamps are switched on automatically depending on the ambient light.

 WARNING Risk of accident when the low beam is switched off in poor visibility

When the light switch is set to **Auro**, the low beam may not be switched on automatically if there is fog, snow or other causes of poor visibility such as spray.

The automatic driving lights are only an aid. You are responsible for vehicle lighting.

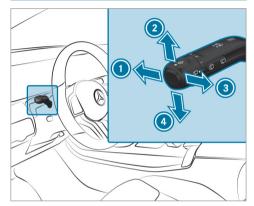

Switching the rear fog lights on or off

Requirements:

- The light switch is in the D or Auro position.
- ▶ Press the 0\$ button.

Please observe the country-specific laws on the use of rear fog lamps.

Operating the combination switch for the lights

- High beam
 Turn signal light, right
- High-beam flasher
- Turn signal light, left
- Use the combination switch to activate the desired function.

Switching on high beam

- ► Turn the light switch to the **ID** or **AUTO** position.
- Push the combination switch in the direction of arrow ①.

When the high beam is activated, the **D** indicator lamp for low beam will be deactivated and replaced by the **D** indicator lamp for high beam.

Switching off high beam

 Push the combination switch in the direction of arrow (1) or pull it in the direction of arrow (3).

High-beam flasher

 Pull the combination switch in the direction of arrow (3).

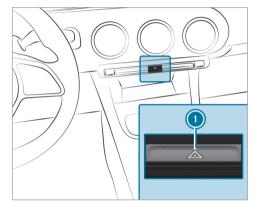

Turn signal light

 To indicate briefly: push the combination switch briefly to the point of resistance in the direction of arrow ② or ③. The corresponding turn signal light will flash three times. To indicate continuously: push the combination switch beyond the point of resistance in the direction of arrow (2) or (4).

Vehicles with Active Lane Change Assist:

- A turn signal indicator activated by the driver may continue to operate for the duration of the lane change.
- If the driver indicated directly beforehand but a lane change was not immediately possible, the turn signal indicator may activate automatically.

Activating/deactivating the hazard warning lights

Press button ①.

The hazard warning lights will switch on automatically if:

• The airbag has been deployed.

Adaptive Highbeam Assist

Adaptive Highbeam Assist function

WARNING Risk of accident despite Adaptive Highbeam Assist

Adaptive Highbeam Assist does not react to:

- Road users without lights, e.g. pedestrians
- Road users with poor lighting, e.g. cyclists
- Road users whose lighting is obstructed, e.g. by a barrier

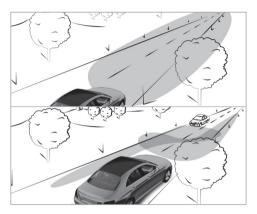

On very rare occasions, Adaptive Highbeam Assist may fail to recognize other road users with their own lighting, or may recognize them too late.

In these, or in similar situations, the automatic high beam will not be deactivated or will be activated despite the presence of other road users.

Always observe the road and traffic conditions carefully and switch off the high beam in good time. Adaptive Highbeam Assist cannot take into account road, weather or traffic conditions. Detection may be restricted in the following cases:

- In poor visibility, e.g. fog, heavy rain or snow
- If there is dirt on the sensors or the sensors are obscured

Adaptive Highbeam Assist is only an aid. You are responsible for adjusting the vehicle's lighting to the prevailing light, visibility and traffic conditions.

Adaptive Highbeam Assist automatically switches between the following types of light:

- Low beam
- High beam

At speeds greater than 19 mph (30 km/h):

• If no other road users are detected, the high beam will switch on automatically.

The high beam will switch off automatically in the following cases:

- At speeds below 16 mph (25 km/h)
- If other road users are detected
- If street lighting is sufficient
- (i) The system's optical sensor is located behind the windshield near the overhead control panel.

Switching Adaptive Highbeam Assist on/off

Switching on

- > Turn the light switch to the **Δυτο** position.
- Switch on the high beam using the combination switch.

If Adaptive Highbeam Assist is activated,

the **b** indicator lamp will light up on the central display section of the instrument display.

Switching off

 Switch off the high beam using the combination switch.

Setting the exterior lighting switch-off delay time

Requirements:

• The light switch is in the **AUTO** position.

Multimedia system:

- → G >> Settings >> Light >> Exterior Lighting Delay
- Set the switch-off delay time.
 When the vehicle engine is switched off, the exterior lighting will be activated for the set time.

Switching the surround lighting on/off

Multimedia system:

→ <a>> Settings Light Locator Lighting

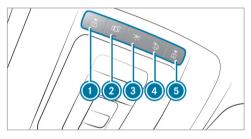

When Locator Lighting is active, the exterior lighting lights up for 40 seconds after the vehicle is unlocked. When you start the vehicle, the surround lighting is deactivated and the automatic driving lights are activated.

Activate or deactivate the function.

Interior lighting

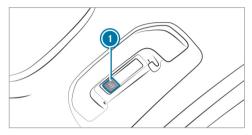

Adjusting the interior lighting

Front overhead control panel

Front left reading lamp
 Automatic interior lighting control
 Front interior lighting
 Rear interior lighting
 Front right reading lamp
 To switch on/off: press button 1 - 6 accordingly.

Control panel in the grab handle

- 🕦 🟦 Rear reading lamp
- To switch on/off: press button ①.

Adjusting the ambient lighting

Multimedia system:

→ 🕞 > Comfort > Ambient Lighting

Setting the color

Select Color.

Set the desired color.

Adjusting the brightness

- Select Brightness.
- Adjust the brightness.

Activating the brightness for zones

- Select Brightness.
- Select Brightness Zones.
- Switch the function on or off.
- or
- Set the brightness for the desired zones.

Activating multi-color lighting

- Select Color.
- Select Multi-color.
- Select a color combination.

Activating multi-color animation

- Select Color.
- Select Multi-color Animation.
- The chosen color combination will change at predefined intervals.

Activating welcome lighting

- Select Color.
- Select Welcome.
 When the vehicle is unlocked, a special ambient lighting sequence will run.

Activating the charge visualization

- Select Color.
- Select charge visualization.

The ambient lighting provides visual feedback on the different states of charge when the vehicle is connected to or disconnected from the charging station.

Activating dependency on air conditioning settings

- Select Color.
- Select Climate.

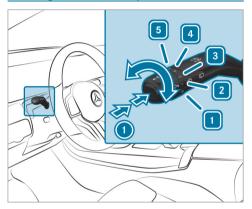

If changes are made to the temperature setting in the vehicle, the color of the ambient lighting will change briefly.

Switching the interior lighting switch-off delay time on/off

Multimedia system:

- → (m) → Settings → Light → Interior Lighting Delay
- Switch the switch-off delay time on or off.
 When this function is active, the interior lighting lights up for a short time after the vehicle is locked.

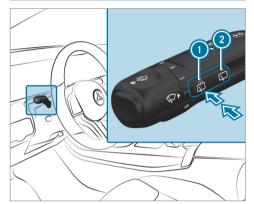

Windshield wiper and windshield washer system Switching the windshield wipers on/off

- 1 0 Windshield wipers off
- **2** ••• Automatic wiping, normal
- 3 •••• Automatic wiping, frequent
- 4 Continuous wiping, slow
- 5 Continuous wiping, fast

- Turn the combination switch to the corresponding position **1** - **5**.
- Single wipe/washing: push the button on the combination switch in the direction of arrow
 O.
 - 😱 Single wipe
 - 🔯 Wiping with washer fluid
- (i) Observe the notes on washing the vehicle in a car wash (→ page 285).

Switching the rear window wiper on/off

- 🛈 🛱 Single wipe/washing
- Intermittent wiping
- Single wipe: press button ① to the point of resistance.
- To wipe with washer fluid: press button beyond the point of resistance.

To switch intermittent wiping on/off: press button ②.

The \fbox symbol will appear on the instrument cluster when the rear window wiper is switched on.

Replacing the windshield wiper blades

WARNING Risk of becoming trapped if the windshield wipers are switched on while wiper blades are being replaced

If the windshield wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

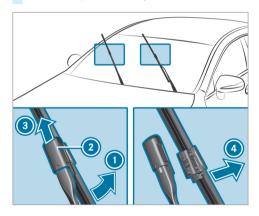

Always switch off the windshield wipers and vehicle before changing the wiper blades.

Moving the wiper arms into the replacement position

 Switch the vehicle on and then off again immediately. Within around 15 seconds, press and hold the P button on the combination switch for approximately three seconds (\rightarrow page 130). The wiper arms will move into the replacement position.

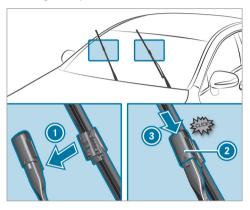

Removing the wiper blades

Fold the wiper arms away from the windshield.

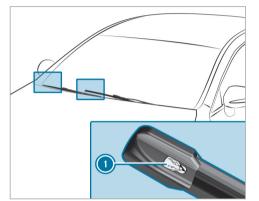

- Hold the wiper arm with one hand. With the other hand, turn the wiper blade away from the wiper arm in the direction of arrow () as far as it will go.
- Slide catch ② in the direction of arrow ③ until it engages in the removal position.
- Remove the wiper blade from the wiper arm in the direction of arrow ④.

Installing the wiper blades

- Insert the new wiper blade into the wiper arm in the direction of arrow ①.
- Slide catch ② in the direction of arrow ③ until it engages in the locking position.
- Make sure that the wiper blade is seated correctly.
- Fold the wiper arms back onto the windshield.

- Switch on the vehicle.
- Press the ⊕ button on the combination switch (→ page 130). The wiper arms will return to their original positions.
- Switch off the vehicle.
- i) Check the condition of the wiper blades regularly and replace them in the event of visible damage or ongoing smearing.

Maintenance display

Remove protective film () from the maintenance displays on the tips of the newly installed wiper blades.

When the color of the maintenance displays changes from black to yellow, replace the wiper blades.

(i) The duration until the color changes varies depending on the usage conditions.

Replacing the rear window wiper blade

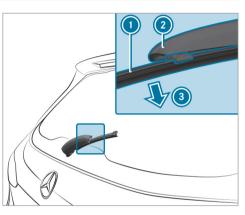

WARNING Risk of becoming trapped if the windshield wipers are switched on while wiper blades are being replaced

If the windshield wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

Always switch off the windshield wipers and vehicle before changing the wiper blades.

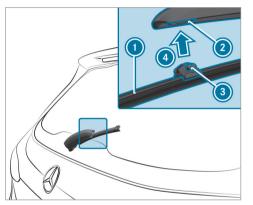

Removing the wiper blade

Switch the vehicle off.

- Fold wiper arm ② away from the rear window until it engages in the replacement position.
- Unclip wiper blade ① from wiper arm ② and remove it in the direction of arrow ③.

Installing the wiper blade

- Position wiper blade (1) with both lugs (3) on holder (2) on the wiper arm.
- Push wiper blade (1) in the direction of arrow
 (4) until it engages in holder (2).
- Make sure that wiper blade () is seated correctly.

 Fold the wiper arm from the replacement position back onto the rear window.

Mirrors

Operating the outside mirrors

 WARNING Risk of injury due to adjusting vehicle settings while the vehicle is in motion

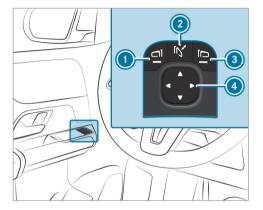

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.
- Before starting the drive system: adjust the driver's seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

▲ WARNING Risk of accident due to misjudgment of distance when using the front-passenger mirror

The outside mirror on the front passenger side reflects objects on a smaller scale. The objects in view are in fact closer than they appear.

Therefore, always look over your shoulder to check the actual distance between you and the road users traveling behind you.

- To fold in or out: briefly press button 2.
- To set: press button ① or ③ to select the outside mirror to be adjusted.
- Use button (4) to adjust the position of the mirror glass.
- (i) If the battery has been disconnected or completely discharged, you will have to reset the

outside mirrors. Only then will the automatic mirror folding function work properly.

▶ To reset: briefly press button ②. An outside mirror that has been pushed out of position can be engaged in position again as follows:

- Vehicles without electrically folding outside mirrors: Manually move the outside mirror into the correct position.
- Vehicles with electrically folding outside mirrors: Press and hold button (2).
 You will hear a click. The outside mirror will now be set to the correct position.

Automatic anti-glare mirrors function

WARNING Risk of acid burns and poisoning due to the anti-glare mirror electrolyte

Electrolyte may escape if the glass in an automatic anti-glare mirror breaks.

The electrolyte is hazardous to health and causes irritation. It must not come into contact

with your skin, eyes, respiratory organs or clothing or be swallowed.

- If you come into contact with electrolyte, observe the following:
 - Immediately rinse the electrolyte from your skin with water and seek medical attention.
 - If electrolyte comes into contact with your eyes, immediately rinse them thoroughly with clean water and seek medical attention.
 - If the electrolyte is swallowed, immediately rinse your mouth out thoroughly. Do not induce vomiting. Seek medical attention immediately.
 - Immediately change out of clothing which has been contaminated with electrolyte.
 - If an allergic reaction occurs, seek medical attention immediately.

The inside rearview mirror and the outside mirror on the driver's side will automatically go into anti-

glare mode if light from a headlamp hits the sensor on the inside rearview mirror.

System limits

The system will not go into anti-glare mode if:

- The drive system is switched off.
- Reverse gear is engaged.
- The interior lighting is switched on.

Front-passenger outside mirror parking position function

The parking position makes parking easier.

The front-passenger outside mirror will swivel downwards in the direction of the rear wheel on the front passenger's side when:

- The parking position is stored (\rightarrow page 136).
- The front-passenger mirror is selected.
- Reverse gear is engaged.

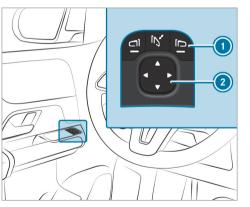

The front-passenger outside mirror will move back to its original position when:

• You shift the transmission to another transmission position.

- You are traveling at a speed greater than 9 mph (15 km/h).
- You press the button for the outside mirror on the driver's side.

Storing the parking position of the frontpassenger outside mirror using reverse gear

Storing

- Press button () to select the front-passenger outside mirror.
- Engage reverse gear.
- Move the front-passenger outside mirror into the desired parking position using button (2).

Calling up

- Press button ① to select the front-passenger outside mirror.
- Engage reverse gear.
 The front-passenger outside mirror will move into the stored parking position.

Activating/deactivating the automatic mirror folding function

Multimedia system:

- → 🕞 >> Settings >> Vehicle
- Switch Automatic Folding on or off.

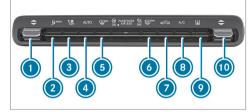

Overview of climate control systems

Notes on climate control

In order for the air conditioning system, monitoring of the pollution level and air filtration to function correctly, an interior air filter must always be used. Make sure that the filter is installed correctly. Use filters recommended and approved by Mercedes-Benz. Always have maintenance work carried out at a qualified specialist workshop.

Overview of the control panel for 3-zone automatic climate control

The indicator lamps on the **Auto**, **(MAC)**, **(MA**

- Sets the temperature on the driver's side
- 2 Zalls up the air conditioning menu
- Sets the airflow or switches off climate control
- ▲ UTO Sets climate control to automatic (→ page 138)
- 5 🗑 🖗
- Impression Switches the rear window heater on/off
- Switches air-recirculation mode on/off (→ page 139)
- Interpretation (→ page 138)
 Interpretation (→ page 138)

- Is Activates/deactivates "Immediate preentry climate control" (→ page 141)
- Sets the temperature on the front passenger side

Operating the climate control system

Switching climate control on/off

- To switch on: set the airflow to level 1 or higher using the set the airflow to level 1 or
- To switch off: set the airflow to level 0 using the set the airflow to level 0.
- (i) When the ECO drive program is activated, the climate control functions are restricted to increase the range. This can have an effect on the warming or cooling of the vehicle interior. In the ECO drive program, the windows may also fog up faster in heating mode (→ page 153).
- If climate control is switched off, the windows may fog up more quickly. Switch off climate control only briefly.

Switching the A/C function on/off using the air conditioning control panel

The A/C function heats, cools and dehumidifies the vehicle's interior air.

Press the A/C button.

Switch off the A/C function only briefly; otherwise, the windows may fog up more quickly.

Condensation may drip from the underside of the vehicle when cooling mode is active. This is not indicative of a malfunction.

Calling up the air conditioning menu

Calling up the air conditioning menu using the multimedia system

Select one of the temperature displays at the lower edge of the media display.

Calling up the air-conditioning menu using the button on the climate control panel

Press the *best* button on the climate control panel.

Activating/deactivating the A/C function via the multimedia system

Multimedia system:

→ Climate Menu → First Row of Seats

The A/C function heats, cools and dehumidifies the vehicle's interior air.

Select A/C.

Setting climate control to automatic mode

In automatic mode, the set temperature is controlled and maintained at a constant level by the air supply.

- Press the **AUTO** button.
- To switch to manual mode: press the J or Auton button.

In automatic mode, you can choose between five different air quantities using the []] button. Automatic mode is retained.

Setting the air distribution

- Call up the air conditioning menu $(\rightarrow page 138)$.
- To set the air distribution: select , j, j.
 or , i.
- Set the airflow.
- Several air distributions can be selected, e.g. to air-condition both the windshield and the footwell.

Switching the synchronization function on/off via the multimedia system

Multimedia system:

→ Climate Menu > First Row of Seats

Climate control can be set centrally using the synchronization function. The driver's settings for temperature, air quantity and air distribution are adopted automatically for all climate zones.

Select SYNC and switch on or off.

Removing condensation from the windows

Windows fogged up on the inside

- Press the **AUTO** button.
- If the windows continue to fog up: press the mean button.

Windows fogged up on the outside

- Switch on the windshield wipers.
- Press the **AUTO** button.

Switching air-recirculation mode on/off

Press the sim button.
 The interior air will be recirculated.

Air-recirculation mode automatically switches to fresh air mode after a while.

(i) If air-recirculation mode is switched on, the windows may fog up more quickly. Switch on air-recirculation mode only briefly.

Pre-entry climate control using the SmartKey

Function of pre-entry climate control using the SmartKey

Before entering the vehicle, the driver's seat area or the whole vehicle interior can be briefly prewarmed or pre-cooled.

When pre-cooling, the following functions are activated as needed:

- Automatic climate control
- Blower
- Seat ventilation

When pre-heating, the following functions are activated as needed:

- Automatic climate control
- Blower
- Seat heating
- Steering wheel heating
- Mirror heater
- · Rear window defroster

Setting pre-entry climate control via the SmartKey Multimedia system:

→ Climate Menu → Pre-entry Climate Ctrl.

Switching on/off

- 🕨 Select 🚺.
- Select Pre-entry Climate Control via Key.

Switching pre-entry climate control via the Smart-Key on/off

Requirements:

- The high-voltage battery is charged sufficiently.
- The function has been activated via the multimedia system.
- To switch on: unlock the vehicle. The climate control functions are activated for up to five minutes for pre-heating and precooling.

Pre-entry climate control via the SmartKey cannot be activated more than three times when the vehicle is switched off.

To switch off: push the <u>the</u> button up or down.

The following functions will remain active once the vehicle has been started:

- Seat heating
- Seat ventilation

Pre-entry climate control at time of departure

Pre-entry climate control for departure time function

WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

Never leave persons, particularly children, unattended in the vehicle.

The vehicle interior can be air conditioned when the vehicle is parked.

When the vehicle is connected to power supply equipment, priority is given to charging the highvoltage battery to a specified minimum charge. The running time of pre-entry climate control may be reduced under the following conditions:

- The vehicle is not connected to power supply equipment.
- The high-voltage battery is not charged sufficiently.

With active pre-entry climate control, the charge level of the high-voltage battery may be reduced, even if the charging cable connector is connected.

For cooling, the following functions are activated as needed:

- Automatic climate control
- Blower
- Seat ventilation

For heating, the following functions are activated as needed:

- Automatic climate control
- Blower

- Seat heating
- Steering wheel heating
- Mirror heater
- Rear window heater

Setting pre-entry climate control for departure time

Multimedia system:

→ Climate Menu >> Pre-entry Climate Ctrl.

Setting a single departure time

- Select ONCE.
- Set a departure time.

Changing the active departure time

- Select the pen icon next to the displayed departure time.
- Set a departure time.

Setting the week profile

- Select WEEK PROFILE.
- Set the desired departure times, e.g. every day at 8 a.m.

Selecting the zone

🕨 Select 🚺.

Select Driver's Seat Only. If the Driver's Seat Only setting is deactivated, pre-entry climate control takes place for the entire vehicle.

Activating/deactivating pre-entry climate control for departure time

Requirements:

- The high-voltage battery is charged sufficiently.
- The function has been activated via the multimedia system.
- **To activate:** set the departure time $(\rightarrow page 140)$.

Pre-entry climate control for departure time switches on a maximum of 55 minutes before the selected departure time. It will remain active for another ten minutes if the departure is delayed.

• To deactivate: push the the down.

The following functions will remain active once the vehicle has been started:

- Seat heating
- Seat ventilation
- (i) You can also activate the function via the Mercedes me app.

Activating/deactivating immediate pre-entry climate control

WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.

Never leave persons, particularly children, unattended in the vehicle.

Air-conditioning of the vehicle interior can continue for up to 30 minutes, e.g. if the journey is interrupted. The colors of the indicator lamp on the <u>state</u> button have the following meanings:

- Blue: cooling is activated.
- Red: heating is activated.
- Yellow: the departure time has been preselected.
- Set the desired temperature using the value
 button.
- Press the 「録」 button.
 The red or blue indicator lamp on the 「録」
 button will light up or go out.
- (i) You can also activate the function via the Mercedes me app.

Air vents

Adjusting the front air vents

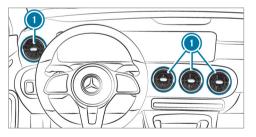

WARNING Risk of burns or frostbite due to being too close to the air vents

Very hot or very cold air can flow from the air vents.

- Make sure that all vehicle occupants always maintain a sufficient distance from the air vents.
- If necessary, direct the airflow to another area of the vehicle interior.

To guarantee the flow of fresh air through the air vents into the vehicle interior, comply with the following:

- Always keep the vents and ventilation grilles in the vehicle interior clear.
- Keep the air inlet free of residue build-up (→ page 285).

- To open or close: hold air vent () in the center and turn it to the left (open) or right (closed) as far as it will go.
- To set the airflow direction: hold air vent () in the center and move it up or down or to the left or right.

Adjusting the rear air vents

- To open or close: hold air vent () in the center and turn it to the left or right as far as it will go.
- To set the airflow direction: hold air vent

 in the center and move it up or down or to the left or right.

Driving

Notes on electric mode

WARNING Risk of chemical burns and poisoning from damaged high-voltage battery

If the housing of the high-voltage battery has been damaged, electrolyte and gases may leak out.

- Avoid contact with the skin, eyes or clothing.
- Immediately rinse electrolyte splashes off with water and seek medical attention straight away.
- ▲ **DANGER** Risk of explosion from excessive internal pressure of the high-voltage battery

Flammable gas may escape and ignite in the event of a vehicle fire.

Stop the charging process immediately in case of unusual odors, smoke or burn marks.

- Leave the danger zone immediately. Secure the danger zone at a sufficient distance.
- ► Call the fire brigade.

Observe the following notes on vehicle noise emissions and the acoustic vehicle warning system:

• The vehicle is equipped with a purely electric drive system and develops considerably lower stationary and vehicle noise emissions than vehicles with a combustion engine.

It is for this reason that the vehicle is equipped with a sound generator, which serves as an acoustic vehicle warning system (AVAS).

• The sound generator generates speed-dependent vehicle noise emissions when driving forward or backing up at a speed of up to around 25 mph (30 km/h).

This helps other road users, particularly pedestrians and cyclists, to hear your vehicle better.

- When driving at speeds above 20 mph (20 km/h) The vehicle acoustic warning system gradually switches off.
- Despite the sound generator, the vehicle still may not be heard by other road users. Adapt your driving style accordingly.

Manual disconnection of the high-voltage onboard electrical system

▲ DANGER Risk of death and fire due to modified and/or damaged components of the high-voltage on-board electrical system

The vehicle's high-voltage on-board electrical system is under high voltage. If you modify component parts in the vehicle's high-voltage on-board electrical system or touch damaged component parts, you may be electrocuted. In addition, modified and/or damaged components may cause a fire.

In the event of an accident or impact to the vehicle underbody, components of the high-

voltage electrical system may be damaged although the damage is not visible.

- Never make any modifications to the high-voltage on-board electrical system.
- Do not switch on or use the vehicle if its high-voltage on-board electrical system components have been modified or damaged.
- Never touch damaged components of the high-voltage on-board electrical system.
- After an accident, do not touch any components of the high-voltage on-board electrical system.
- After an accident, have the vehicle transported away.
- Have the components of the high-voltage on-board electrical system checked at a qualified specialist workshop and replaced if necessary.

Requirements:

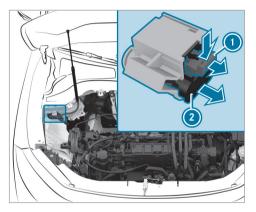

Only disconnect the high-voltage on-board electrical system manually in the following situations:

- The 💽 restraint system warning lamp lights up in the Instrument Display, e.g. after an accident.
- The vehicle is badly damaged, e.g. after an accident, and the restraint system components have not been triggered.

Operating the high-voltage disconnect device

Only disconnect the high-voltage on-board electrical system manually in the above-mentioned situations.

- Switch off the vehicle.
- Shift the transmission to position **P**.
- Apply the electric parking brake.
- Secure the vehicle against rolling away.
- Open the hood.

- Press release tab ① in the direction of the arrow and pull it out.
- Pull high-voltage disconnect device ② in the direction of the arrow until it engages. The high-voltage on-board electrical system is switched off.

All work on the drive system (including after disconnecting the high-voltage on-board electrical

system manually) may only be carried out by a qualified specialist workshop.

Switching on the power supply or the vehicle

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

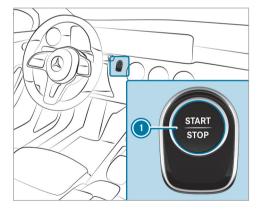

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the transmission position.
- starting the vehicle.
- Never leave children unattended in the vehicle.

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.

Requirements:

- The SmartKey is in the vehicle and is recognized.
- The brake pedal is not depressed.

To switch on the power supply: press button
 Once.

You can, for example, activate the windshield wipers.

The power supply is switched off again if the following conditions are met:

- You open the driver's door.
- You press button (1) twice more.
- To switch on the vehicle: press button twice.

Indicator and warning lamps go on in the instrument cluster.

The vehicle is switched off again if one of the following conditions is met:

- You do not start the vehicle within 15 minutes and the transmission is in position **P** or the electric parking brake is applied.
- You press button (1) once.

Starting the vehicle

Starting the vehicle with the start/stop button

Requirements:

- The SmartKey is in the vehicle and is recognized.
- Shift the transmission to position **P** or **N**.
- Depress the brake pedal and press button () once.
 - The vehicle is started.
 - The display READY appears in the instrument display: the vehicle can be driven.
- If the vehicle does not start: switch off nonessential consumers and press button () once.
- If the vehicle still does not start and the display message Place the Key in the Marked Space See Operator's Manual appears in the instrument display: start the vehicle with the SmartKey in the marked space (emergency operation mode) (→ page 146).

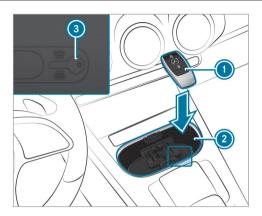

onds or by pressing button () three times within three seconds. The transmission shifts to neutral [N] automatically. When you press button () again, the vehicle starts again and you can engage drive position [D] again. Be sure to observe the safety notes under "Driving tips" (\rightarrow page 147).

Observe any information regarding display messages that can be displayed on the instrument display.

Starting the vehicle with the SmartKey in the marked space (emergency operation mode) If the vehicle does not start and the Place the

Key in the Marked Space See Operator's Manual

display message appears in the multifunction display, you can start the vehicle in emergency operation mode.

Marked space (example with cup holder without cover)

- Open the cover of marked space ② if necessary.
- Make sure that marked space (2) is empty.
- Remove SmartKey ① from the key ring.

 Place SmartKey (1) in marked space (2) on symbol (3).

The vehicle will start after a short time. When you remove SmartKey ① from marked space ②, the vehicle can be driven. For further engine starts however, SmartKey ① must be located in marked space ② on symbol ③ during the entire journey.

If the vehicle does not start:

- Place SmartKey ① in marked space ② and leave it there.
- Depress the brake pedal and start the vehicle using the start/stop button.
- (i) You can switch on the power supply or the vehicle with the start/stop button.

Observe any information regarding display messages that can be displayed on the multifunction display.

Breaking-in notes

- In certain driving and driving safety systems, the sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full system effectiveness is not reached until the end of this teach-in process.
- Brakepads, brake discs and tires that are either new or have been replaced only achieve optimum braking effect and grip after several hundred kilometers of driving. Compensate for the reduced braking effect by applying greater force to the brake pedal.

Notes on driving

WARNING Risk of accident due to objects
 in the driver's footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal.

This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- Do not use loose floor mats and do not place floor mats on top of one another.
- WARNING Risk of accident due to incorrect footwear

Incorrect footwear includes, for example:

- Shoes with platform soles
- Shoes with high heels
- Slippers

There is a risk of an accident.

Always wear suitable footwear so that you can operate the pedals safely.

WARNING Risk of accident if the vehicle is switched off while driving

If you switch off the vehicle while driving, safety functions are restricted or no longer available.

This may affect the power steering system and the brake force boosting, for example.

You will need to use considerably more force to steer and brake, for example.

- Do not switch off the vehicle while driving.
- WARNING Risk of accident and injury due to being under the influence of alcohol and drugs while driving

Drinking and driving and/or taking drugs and driving are very dangerous combinations. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment.

The possibility of a serious or even fatal accident are greatly increased when you drink or take drugs and drive.

- Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.
- **WARNING** Risk of accident due to the brake system overheating

If you leave your foot on the brake pedal when driving, the brake system may overheat.

This increases the braking distance and the brake system can even fail.

- Never use the brake pedal as a footrest.
- Do not depress the brake pedal and the accelerator pedal at the same time while driving.

NOTE Reduced battery life due to frequent short-distance trips

The 12 V battery may not be sufficiently charged when the vehicle is used only for short-distance trips. This reduces the life of the battery.

- Drive longer distances regularly to charge the battery.
- NOTE Damage to the vehicle due to not observing the maximum permitted headroom clearance

If the vehicle height is greater than the maximum permitted headroom clearance, the roof and other parts of the vehicle may be damaged.

- Observe the signposted headroom clearance.
- If the vehicle height is greater than the permitted headroom clearance, do not enter.
- Observe the changed vehicle height with add-on roof equipment.

Notes on driving with a roof load, trailer or fully laden vehicle

When driving with a loaded roof luggage rack or trailer as well as with a fully laden or fully occupied vehicle, the vehicle's driving and steering characteristics change. You should bear the following in mind:

- Do not exceed the permissible roof load and towing capacity. Also observe the technical data in the printed Operator's Manual.
- Evenly distribute the roof load, and place heavy objects at the bottom. Also comply with the notes on loading the vehicle (→ page 106).
- Drive attentively, and avoid suddenly pulling away, braking and steering as well as rapid cornering.

Notes on driving on salt-treated roads

The braking effect is limited on salt-treated roads. Therefore, observe the following notes:

- Due to salt build-up on the brake discs and brakepads, the braking distance can increase considerably or result in braking only on one side
- Maintain a much greater safe distance to the vehicle in front

To remove salt build-up:

- Brake occasionally while paying attention to the traffic conditions
- Carefully depress the brake pedal at the end of the journey and when starting the next journey

Notes on hydroplaning

Hydroplaning can take place once a certain amount of water has accumulated on the road surface.

Observe the following notes during heavy precipitation or in conditions in which hydroplaning may occur:

- Reduce speed
- Avoid tire ruts
- Avoid sudden steering movements
- Brake carefully
- (i) Also observe the notes on regularly checking wheels and tires (\rightarrow page 314).

Notes on driving through water on the road surface

Water which has entered the vehicle can damage the drive system, electrics and transmission. Observe the following if you must drive through water:

- The water, when calm, may only reach the lower edge of the vehicle body.
- Drive at walking pace at most; water can otherwise enter the vehicle interior.
- Vehicles traveling in front, or oncoming vehicles, can create waves which may exceed the maximum permissible depth of the water.

The braking effect of the brakes is reduced after fording. Brake carefully while paying attention to the traffic conditions until braking power has been fully restored.

ECO display function

The ECO display summarizes your driving characteristics from the start of the journey to its completion and assists you in adopting an efficient driving style to maximize range.

You can influence energy consumption by doing the following:

- Driving with particular care (\rightarrow page 151)
- Driving in drive program \square (\rightarrow page 153)

The lettering in the segment will light up brightly, the outer edge will light up and the segment will fill up when the following driving style is adopted:

- ① Steady speed
- 2 Gentle deceleration and rolling
- 3 Moderate acceleration

The lettering in the segment will be gray, the outer edge will be dark and the segment will empty when the following driving style is adopted:

- (1) Fluctuations in speed
- 💿 Heavy braking
- ③ Sporty acceleration

The ECO display will show you when you have driven economically:

- The three segments will fill up completely at the same time
- The edges around all three segments will light up

The additional range achieved as a result of your driving style in comparison with a driver with a very sporty driving style will be shown on the center of display (2). The range displayed does not indicate a fixed reduction in consumption.

Recuperative brake system

Function of the recuperative brake system

Depending on the selected recuperation level, the electric motors are operated as an alternator

when in overrun mode and during braking in order to charge the high-voltage battery while driving. As soon as you release the accelerator pedal when the vehicle is in motion, recuperation in overrun mode is initiated.

The higher the recuperation, the more sharply the vehicle is braked when coasting and the more electrical energy is fed into the high-voltage battery.

The regenerative brake system has the following characteristics:

- Supports braking with electronically controlled brake force boosting
- Converts the kinetic energy of the vehicle into electric energy
- (i) If you brake hard, the mechanical brake is also used. This means that the maximum recuperative energy cannot be recovered. The more you drive and brake in an anticipatory manner, the more efficiently energy can be recuperated.

System limits

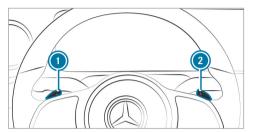

The braking effect of the electric motor during recuperation in overrun mode may be reduced or may not be available at all in the following situations:

- When the high-voltage battery condition of charge increases
- If the high-voltage battery is not yet at a normal operating temperature
- When driving at speeds close to zero
- In transmission position **N**
- During and after ESP® intervenes

In these cases, the desired deceleration is set by the brake control system. Also brake with the service brake if necessary.

Manually setting recuperative deceleration

You can use the steering wheel paddle shifters to manually adjust the intensity of recuperation in overrun mode.

- (i) When the vehicle is started again, the following recuperation level is set:
 - **D AUTO**: if **D AUTO** was selected previously.
 - D: if a recuperation level other than D AUTO was selected previously.

The following recuperation levels are available:

- **D** Auro Intelligent and anticipatory recuperation with ECO Assist (→ page 151)
- D + No recuperation: the vehicle coasts, rolls freely
- D Normal recuperation

- **D** Increased recuperation: increased deceleration in overrun mode
- **D** – Maximum recuperation: maximum deceleration in overrun mode
- To increase recuperation: briefly pull paddle shifter (1).
- To reduce recuperation: briefly pull paddle shifter 2.
- To select D мито: pull and hold paddle shifter (1) or (2).

The Instrument Display shows the currently selected recuperation level next to the transmission position display.

ECO Assist function

(i) ECO Assist is not available in all countries. Depending on the vehicle's equipment, different events ahead can be detected.

ECO Assist is active only in **D** AUTO (\rightarrow page 151).

ECO Assist analyzes data for the vehicle's expected route. This allows the system to optimally

adjust the driving style for the route ahead, use minimal energy and recuperate.

ECO Assist is displayed on the Assistance menu(\rightarrow page 232). If the system detects an event ahead, e.g. a vehicle ahead, and the driving style can be optimized, the event will appear on the instrument display.

Depending on the vehicle's equipment, the following events can also be detected and displayed for the route section ahead:

- Speed limit
- Downhill gradient
- Intersections and roundabouts
- Curves

Vehicles with Driving Assistance Package: In order for ECO Assist to react to a speed limit, the automatic adoption of speed limits must be activated (\rightarrow page 206). These route events will be detected only if route-based speed adaptation is active (\rightarrow page 196).

- Event ahead
- 2 Distance display for the event ahead
- ③ "Foot off the accelerator" recommendation

The segments of distance display ② show the distance to the event ahead as follows:

- A few segments light up: the event ahead is near.
- Many segments light up: the event ahead is further away.

If ECO Assist is active, "Foot off the accelerator" symbol () will appear on the DriveAssist menu on the instrument display, on the head-up display and next to the transmission position display. When the vehicle nears an event, ECO Assist will calculate the optimal speed for minimal energy consumption based on the distance and speed. "Foot off the accelerator" recommendation (3) will appear on the instrument display.

If you take your foot off the accelerator pedal in good time, the remaining segments on the display will successively turn green until the event shown is reached. The drivetrain will be set for minimal energy consumption. The vehicle will recuperate autonomously and thus charge the high-voltage battery.

 (i) You can also manually increase or reduce recuperation. However, ECO Assist is available only in the D Auro setting (→ page 151).

If there is no response to "Foot off the accelerator" recommendation (3), the segments will remain white.

The event will be shown for a short time after it has been passed.

If the event involves a vehicle in front, all segments will immediately turn green once there is a response to "Foot off the accelerator" prompt (3). If ECO Assist cannot identify a recommendation for adjusting the driving style for the event ahead, nothing will be displayed. The system will be passive.

System limits

ECO Assist can function even more precisely if the route is adhered to when route guidance is active. The basic function is also available without active route guidance. Not all information and traffic situations can be foreseen. The quality depends on the available map data.

ECO Assist is only an aid. The driver is responsible for keeping a safe distance from the vehicle in front, for vehicle speed and for braking in good time. You must be ready to brake at all times irrespective of whether the system is active.

The system may be impaired or may not function in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.

- If the windshield is dirty in the vicinity of the multifunction camera.
- If the multifunction camera is fogged up, damaged or obscured.
- If road signs are hard to detect, e.g. due to dirt, snow or insufficient lighting, or because they are obscured.
- If the digital road map of the navigation system has incorrect or outdated information.
- If signs are ambiguous, e.g. road signs in roadworks or in adjacent lanes.
- If the radar sensors are dirty or obscured.
- When you drive on roads with steep uphill or downhill gradients.
- If there are narrow vehicles in front, such as bicycles or motorcycles.

DYNAMIC SELECT switch

Function of the DYNAMIC SELECT switch

Use the DYNAMIC SELECT switch to change between the following drive programs: (\rightarrow page 155).

Depending on the drive program selected, the following vehicle characteristics will change:

- Drive
- Suspension
- Steering
- ESP[®]
- Climate control

Available drive programs

Individual

- The following vehicle characteristics are individually adjustable:
 - Drive
 - Suspension
 - Steering

S Sport

- Maximum power availability
- Stability but with a sporty, dynamic setup
- Only suitable for good road conditions, a dry road surface and a clear stretch of road

C Comfort

- Comfortable driving style
- Balance between traction and stability
- Best balance between efficiency and performance for all driving situations
- Recommended for all road conditions

E Eco

- Economical setting of vehicle functions
- · Balance between traction and stability
- Recommended for all road conditions
- Restricted performance of the climate control to increase the range (→ page 137)

In heating mode, the windows may fog up more quickly.

 Maximum permissible speed limited to 81 mph (130 km/h)

If you depress the accelerator pedal beyond the pressure point (kickdown), the limit is raised to the maximum permissible speed.

• When the route option Electric Intelligence is switched on and route guidance is active, a

checkered flag in the speedometer indicates the maximum permissible speed recommended by active range monitoring . It is the driver's own responsibility to comply with them in order to reach the next scheduled charging station .

Notes on the roof load display

Certain drive programs and $\mathsf{ESP}^{\textcircled{R}}$ settings are unsuitable for transporting a roof load.

If one of these drive programs is set or selected, the symbol is shown as a warning. When this symbol is shown, the selected drive program is not suitable for transporting a load on the roof.

The following drive programs are affected:

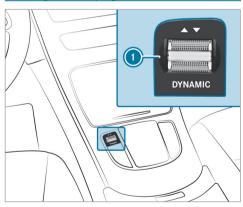

- Sport drive program
- Individual drive program with the Sport ESP[®] setting
- (i) The symbol is also shown in the following situations:
 - Within the themes if a corresponding drive program is saved

For more information on themes see .

• Within the reset display if the previously active drive program is unsuitable for the transport of a roof load

For further information on the reset display, see (\rightarrow page 155).

Selecting the drive program

 Press DYNAMIC SELECT switch () forwards or backwards.

The drive program selected appears in the multifunction display.

Configuring DYNAMIC SELECT (multimedia system)

Multimedia system:

→ 🕞 >> Settings >> Vehicle >> DYNAMIC SELECT

Setting drive program I

- Select Individual Configuration.
- Select and set a category.

Switching the restoration display on or off

Activate or deactivate Request at Start.

Function on: the next time the vehicle is started a prompt appears asking whether the last active drive program should be restored.

Function on: the next time the vehicle is started a prompt appears asking whether the last active drive program should be restored. If the ECO

start/stop function was deactivated, an additional prompt appears asking if the function should remain deactivated.

(i) The prompt appears only if the previously active settings deviate from the standard settings.

Function off: the next time the vehicle is started the **C** drive program is set automatically. The ECO start/stop function is activated automatically.

- (i) This function must be activated for each user profile separately. Only when this function is activated will the drive program and ECO start/stop setting for the previous journey be saved for the respective user profile.
- This function must be activated for each user profile separately. The drive program for the respective user profile of the last driver is only stored if this function is activated.

Displaying vehicle data

Multimedia system:

¬→ 🞧 >> EQ

Select Vehicle. The vehicle data is displayed.

Displaying engine data

Multimedia system:

→ 🕞 > Info

- Select Engine. The engine data is displayed.
- The actual (maximum) values that can be achieved for engine output and engine torque may deviate from the certified values within the country-specific guidelines for permissible tolerances (basis: UN-ECE No. 85 or countryspecific guidelines).

Influencing variables that can influence this are, for example:

- Sea level
- Fuel grade

- Outside temperature
- Operating temperature of the engine
- The values displayed serve only as orientation. The values for engine output and engine torque shown on the media display may deviate from the actual values.

Calling up the fuel consumption indicator

Multimedia system:

¬→ 🟠 ≫ EQ

Select Consumption.

The current and average consumption is displayed.

Transmission

DIRECT SELECT lever

Function of the DIRECT SELECT lever

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

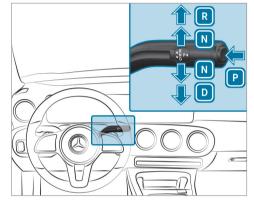

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the transmission position.
- starting the vehicle.
- Never leave children unattended in the vehicle.

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.

Use the DIRECT SELECT lever to switch the transmission position. The current transmission position is displayed in the instrument display.

- P Park position
- **R** Reverse gear
- Neutral
- **D** Drive position

Engaging reverse gear R

Depress the brake pedal and push the DIRECT SELECT lever upwards past the first point of resistance.

Engaging neutral N

Depress the brake pedal and push the DIRECT SELECT lever up or down to the first point of resistance.

Subsequently releasing the brake pedal will allow you to move the vehicle freely, e.g. to push it or tow it away.

If you want the transmission to remain in neutral N even if the vehicle is switched off:

- Start the vehicle.
- Depress the brake pedal and engage neutral
 N.
- Release the brake pedal.
- Switch off the vehicle.
- (i) If you then exit the vehicle leaving the Smart-Key in the vehicle, the transmission remains in neutral **N**.

Engaging park position P

- Observe the notes on parking the vehicle $(\rightarrow page 174)$.
- Depress the brake pedal until the vehicle comes to a standstill.

When the vehicle is stationary, press button **P**.

Park position is only engaged when the transmission position display **P** is shown in the driver's display. If no transmission position display **P** appears, secure the vehicle to prevent it from rolling away.

Park position **P** is engaged automatically if one of the following conditions is met:

- You switch the vehicle off in transmission position **D** or **R**.
- You open the driver's door when the vehicle is at a standstill or when driving at a very low speed and the transmission is in position D or R.
- (i) To maneuver with an open driver's door, open the driver's door while stationary and engage transmission position **D** or **R** again.
- (i) If you have engaged park position **P** or switched off the vehicle and no transmission position display is displayed, secure the vehicle from rolling away (→ page 179).

Engaging drive position D

Depress the brake pedal and push the DIRECT SELECT lever down past the first point of resistance.

Function of the 4MATIC

The flexible all-wheel distribution of the 4MATIC means the drive is always ideally distributed between both axles. Depending on the situation, only the front axle or only the rear axle can be driven, or the drive can be distributed continuously between both axles.

This means that recuperation can be used even more effectively and the range of the vehicle can be increased (\rightarrow page 150).

Together with ESP^{\circledast} and 4ETS, 4MATIC improves the traction of your vehicle whenever a driven wheel spins due to insufficient traction.

If you fail to adapt your driving style, 4MATIC can neither reduce the risk of an accident nor override the laws of physics. It cannot take into account road, weather or traffic conditions. 4MATIC is only an aid. You are responsible especially for maintaining a safe distance from the vehicle in front, for vehicle speed, for braking in good time and for staying in lane.

(i) In wintry road conditions, the maximum effect of the flexible all-wheel distribution can be achieved only if you use winter tires (M+S tires), with snow chains if necessary.

Charging the high-voltage battery

Notes on charging the high-voltage battery

NOTE High-voltage battery damage due to leaving the vehicle idle for lengthy periods of time

Lithium-ion batteries experience a natural selfdischarge.

Exhaustive discharging can therefore occur if the vehicle is idle for several months. This can damage the high-voltage battery.

To avoid damage, please observe the following recommendations when handling the high-voltage battery.

NOTE Accelerated aging of the high-voltage battery

As a result of its basic characteristics, the storage capacity of, and the amount of energy available from, the high-voltage battery decreases over the course of its life. Due to this, both the maximum electrical range that can be achieved by the vehicle and its maximum electrical output can be impaired.

The following factors could accelerate the aging of the high-voltage battery:

- Frequently fully charging (charge level 100%) the high-voltage battery, especially when this process is not directly followed by a journey
- Frequent rapid charging with direct current (mode 4)
- Leaving the vehicle idle for lengthy periods at high ambient temperatures
- To avoid accelerated aging, please observe the following recommendations when handling the high-voltage battery.

Recommendations when handling the high-voltage battery:

- Every six months, when the outside temperature is above 50 °F (10 °C), park the vehicle overnight with a condition of charge below 20%.
- Only charge the high-voltage battery with direct current (mode 4) if necessary.
- Charge the high-voltage battery on average to a condition of charge of 80%. Beyond a condition of charge of 80%, the charging time is considerably prolonged.
- If leaving the vehicle idle for extended periods, park the vehicle with the high-voltage battery condition of charge at between 30% and 50%. Do not keep the high-voltage battery continuously connected to power supply equipment.
- If leaving the vehicle idle for extended periods of time avoid, if possible, high ambient temperatures.
- Check the high-voltage battery's condition of charge every six weeks (→ page 172).

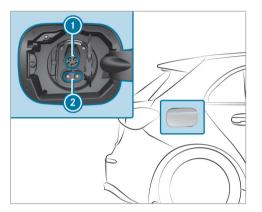

- Charge the high-voltage battery if the condition of charge is below 20%.
- Do not disconnect the 12 V battery even if the vehicle is left idle for an extended period. Otherwise, the condition of the vehicle's high-voltage battery cannot be monitored.

You can contribute to reducing the vehicle's energy consumption in the following ways:

- An anticipatory driving style (\rightarrow page 149)
- Reduced use of electrical consumers
- Having the vehicle regularly maintained

The charging time of the high-voltage battery may change over the course of its life.

You can charge the high-voltage battery with both alternating current (mode 2 or 3) and direct current (mode 4).

- Socket for charging with alternating current
 Socket extension for charging with direct current
- (i) When using a CCS (Combined Charging System) charging cable to charge with direct current, both areas of the vehicle socket are covered by the charging cable connector.

Charging options for the high-voltage battery (mode 2, 3 or 4):

- Charging through recuperation while the vehicle is in motion
- Charging with alternating current when stationary:
 - At a mains socket (mode 2)
 - At a wallbox or charging station (mode 3)
- Charging with direct current when stationary:
 - At a fast charging station (mode 4)

Depending on the country-specific vehicle equipment and your vehicle's charging cable, single phase AC charging is also possible.

Observe the different grid requirements of your current location when charging. Only use charging cables which conform to the grid requirements. Consult a qualified electrician or your local grid operator if you have any questions.

It is recommended that you charge the high-voltage battery at a wallbox or charging station due to the improved charging performance and better charging efficiency offered.

Stowing the charging cable

Always stow the vehicle charging cable in the charging cable bag provided and secure it in the trunk or cargo compartment of your vehicle.

Otherwise, the charging cable is not sufficiently secured.

System limits

The power output of the high-voltage battery may be impaired by the following:

- High or low outside temperatures
- Electrical auxiliary consumers in the vehicle being switched on, e.g. operating the air conditioning system
- · Extended periods without charging

The charging time of the high-voltage battery may be increased by the following:

- · High or low outside temperatures
- Extended periods without charging
- The maximum available charge current of the charging facility
- The settings of the charging process in the multimedia system (→ page 172)

Notes on charging the high-voltage battery at the mains socket (mode 2)

DANGER Risk of fatal injury from incorrectly installed component parts

Connecting the charging cable to a mains socket using incorrectly installed component parts could cause a fire or an electric shock, for example.

- Only connect the charging cable to a mains socket that:
- Has been properly installed and
- Has been inspected by a qualified electrician
- For safety reasons, only use the charging cable supplied with the vehicle or an original Mercedes-Benz charging cable.
- Purchase these parts at an authorized Mercedes-Benz Center and obtain advice there.

Mercedes-Benz thoroughly tests these original charging cables for their suitability for highvoltage charging of your vehicle.

- Never use a damaged charging cable.
- Do not use:
- Extension cables
- Extension reels
- Multiple sockets
- Never use socket adapters to connect the charging cable to the mains socket. The only exception being if the adapter has been tested and approved by the manufacturer for charging the high-voltage battery of an electric vehicle.
- Observe the safety notes in the operating instructions for the socket adapter.

Only the following charging cables may be used:

- The charging cable supplied with the vehicle.
- A charging cable that has been approved for the vehicle.

The charging process can vary depending on the power supply equipment.

Shorter charging times can be achieved in the following ways:

- Charging at a wallbox.
- Charging at a charging station.

When doing so, always observe the local information.

Do not leave the charging cable controls hanging loose from a mains socket.

Do not lift the controls by the following component parts:

- The charging cable connector.
- The mains plug.

When charging, protect the charging cable control element from excessive heat such as direct sunlight. Otherwise, the charging process may be canceled.

Notes on charging the high-voltage battery at a wallbox or charging station (mode 3)

DANGER Risk of fatal injury from incorrectly installed component parts

Connecting the charging cable to the vehicle using incorrectly installed components could cause a fire or an electric shock, for example.

- Only connect the charging cable to a wallbox if:
- The wallbox has been properly installed
- The wallbox has been inspected by a qualified electrician
- The charging cable is not damaged
- ▶ Do not extend the charging cable.
- Do not use adapters.
- Observe the safety notes in the operating instructions for the wallbox.

DANGER Risk of fatal injuries due to damaged components

Connecting the charging cable to a charging station using a damaged component part could cause a fire or an electric shock, for example.

- For charging stations with a preinstalled charging cable:
 - Perform a visual check of the charging station for obvious malfunctions, such as massive damage to the housing or charging cable.
- For charging stations without a preinstalled charging cable:
 - For safety reasons, only use charging cables that have been tested and approved by the manufacturer for charging the high-voltage battery in an electric vehicle.
 - Never use damaged charging cables.
 - Do not extend the charging cable.
 - Do not use adapters.

Make sure to observe the safety information on the charging station.

Most charging stations must be activated before the charging process, e.g. using an RFID card. Observe the on-site operator's instructions for the charging station.

The amount of energy dispensed for the charging process, shown by the charging station, may be higher than the amount of energy actually absorbed by the high-voltage battery. This is the result of different levels of charging losses and is described as recharge efficiency. Charging losses occur, for example, due to heat that builds up when charging or from auxiliary consumers that are switched on. Further information on recharge efficiency can be obtained at a qualified specialist workshop.

Notes on charging the high-voltage battery at a fast charging station (mode 4)

DANGER Risk of fatal injuries due to damaged components

Connecting the charging cable to a charging station using a damaged component part could cause a fire or an electric shock, for example.

- For charging stations with a preinstalled charging cable:
 - Perform a visual check of the charging station for obvious malfunctions, such as massive damage to the housing or charging cable.
- For charging stations without a preinstalled charging cable:
 - For safety reasons, only use charging cables that have been tested and approved by the manufacturer for charging the high-voltage battery in an electric vehicle.
 - Never use damaged charging cables.
 - Do not extend the charging cable.

- Do not use adapters.
- Make sure to observe the safety information on the charging station.

Most charging stations must be activated before the charging process, e.g. using an RFID card. Observe the on-site operator's instructions for the charging station.

The amount of energy dispensed for the charging process, shown by the charging station, may be higher than the amount of energy actually absorbed by the high-voltage battery. This is the result of different levels of charging losses and is described as recharge efficiency. Charging losses occur, for example, due to heat that builds up when charging or from auxiliary consumers that are switched on. Further information on recharge efficiency can be obtained at a qualified specialist workshop.

Setting the maximum permissible charging current for charging at a mains socket

! NOTE Overloading the mains socket due to excessive charging current

If the charging current is too high, the fuse could be tripped or the external mains supply could overheat.

- Make sure that the external mains supply has been designed to handle the set charging current.
- If necessary, reduce the set charging current or use a different mains socket.
- For safety reasons, only use the charging cable supplied with the vehicle or an original Mercedes-Benz charging cable. Mercedes-Benz thoroughly tests these original charging cables for their suitability for high-voltage charging of your vehicle. Purchase these parts at an authorized Mercedes-Benz Center and obtain advice there.

Check the setting of the maximum charge current using the charging capacity shown in the Instrument Display.

Before charging at a mains socket, have the maximum permissible charging current for the relevant mains socket or the building inspected by a qualified electrician. The charging cable supplied is set to a country-specific maximum charging current value. When charging abroad, the maximum value may exceed the permitted value for that country. When abroad, observe the country-specific laws when charging. If you have questions concerning setting the charging current or if there is a malfunction, please contact a qualified specialist workshop.

 Set the maximum permissible charging current in the multimedia system menu (→ page 172).

If the exact value of the maximum permissible charging current cannot be set, select the next smaller adjustable value.

(i) If the vehicle requires more time than usual to charge the high-voltage battery, check the

maximum charging current settings in the multimedia system menu.

Overview of the charging cable control panel

The charging cable control panel shows the current status of the charging process.

- Supply voltage indicator
- 2 Charging process indicator
- 3 Temperature monitor indicator
- Safety system indicator

Starting the alternating current charging process (mode 2/3)

DANGER Risk of death when charging at a damaged socket

The charging process uses high voltage.

If the charging cable, the vehicle socket or the mains socket are damaged, you could receive an electric shock.

- Only use an undamaged charging cable.
- Avoid mechanical damage such as crushing, abrading or driving over the cable.
- Have a damaged vehicle socket replaced at a qualified specialist workshop as soon as possible.
- Never connect the charging cable to a damaged vehicle socket.

I NOTE Damage due to overheating of charging cable and charging cable connector

During the charging process, the charging cable and charging cable connector can heat up within their permissible limit values. The permissible limit values are influenced by the following factors:

- The power supply system and the charging cable are not damaged
- The instructions for handling the charging cable and the control element on the charging cable have been observed
- If the charging cable or charging cable connector becomes too hot, have the power supply system checked.
- **!** NOTE Damaged or dirty vehicle socket when the socket flap is open
- Always keep the socket cover and the socket flap closed when there is no charging cable connected. This protects the vehicle socket from dirt and damage.
- Make sure that the socket cover is closed properly before closing the socket flap. This can otherwise result in damage which may prevent the socket flap from being opened again.

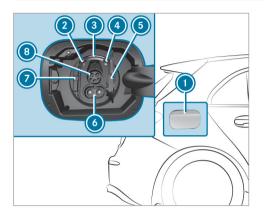

NOTE Damage to the vehicle socket or the charging cable connector due to incorrect handling

Do not use excessive force (maximum 67.4 lbf (300 N)) to insert the charging cable connector into the vehicle socket to the stop. You may otherwise damage the vehicle socket, the charging cable connector or their contacts.

If you feel there is increased resistance, pull the charging cable connector out of the socket and reinsert it.

Requirements:

- The transmission is in position **P**.
- The vehicle is unlocked or the distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).
- The vehicle has not been started.
- The charging cable is not taut.

Press the center rear section of socket flap
 and swing the socket flap forwards and open.

The **r** indicator lamp **2** and status display **3** light up white.

 When the vehicle is started (the READY display is lit in the Instrument Display), socket flap () cannot be opened.

- Press catch (2) to the left and fold open socket cover (5).
- (i) Only connection (i) is required for the charging cable connector. Open only the upper part of socket cover (i).
- To charge at a mains socket, insert the mains plug into the mains socket of the external power source to the stop and set the maximum charging current if required (→ page 163).
- Insert the charging cable connector into vehicle socket connection (a) to the stop. If the wallbox/charging station is not equipped with a charging cable, insert the plug of the vehicle's charging cable into the wallbox/charging station socket to the stop.

Make sure that the charging cable is not taut when inserted.

- The indicator lamp (a) and status display (a) flash orange and, as soon as the high-voltage battery is charged, green.
- When the charging sequence for the ambient lighting is activated, the ambient lighting lights

up for approximately 30 seconds as with the $\boxed{\textcircled{1}}$ indicator lamp () (\rightarrow page 129).

When the charging cable is connected to the vehicle, the vehicle cannot be started or moved.

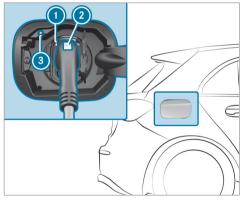

At the start of the charging process, the condition of charge display is shown in the Instrument Display with a charging prediction. The charging prediction either refers to the predicted condition of charge at the set departure time, or the time at which the high-voltage battery will be fully charged.

- (i) When the vehicle is switched on, a lightning symbol appears next to the condition of charge display during the charging process.
- (i) Depending on the temperature, the fan and battery cooling system may audibly switch on during the charging process.
- (i) If the vehicle is idle for lengthy periods and connected to the mains supply, the high-voltage battery will be recharged automatically as needed or when electrical consumers are activated (e.g. the pre-entry climate control).

Ending the alternating current charging process (mode 2/3)

Requirements:

• The distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).

Press charging interruption button (3).
 or

Unlock the vehicle.

The charging process is ended. The \bigcirc indicator lamp \bigcirc lights up white. The vehicle socket is unlocked.

- Press and hold button (2) on the charging cable connector and remove the charging cable connector from the vehicle socket.
- i) If you cannot remove the charging cable connector, repeat the unlocking procedure. If the charging cable connector is still locked, contact a qualified specialist workshop.
- Close the socket cover and the socket flap.
- (i) After the charging cable connector has been disconnected, the final indicator lamp (i) on the vehicle socket remains lit for some time before switching off.

Starting the direct current charging process (mode 4)

DANGER Risk of death when charging at a damaged socket

The charging process uses high voltage.

If the charging cable, the vehicle socket or the mains socket are damaged, you could receive an electric shock.

- > Only use an undamaged charging cable.
- Avoid mechanical damage such as crushing, abrading or driving over the cable.
- Have a damaged vehicle socket replaced at a qualified specialist workshop as soon as possible.
- Never connect the charging cable to a damaged vehicle socket.
- NOTE Damage due to overheating of charging cable and charging cable connector

During the charging process, the charging cable and charging cable connector can heat up within their permissible limit values.

The permissible limit values are influenced by the following factors:

- The power supply system and the charging cable are not damaged
- The instructions for handling the charging cable and the control element on the charging cable have been observed
- If the charging cable or charging cable connector becomes too hot, have the power supply system checked.
- **!** NOTE Damaged or dirty vehicle socket when the socket flap is open
- Always keep the socket cover and the socket flap closed when there is no charging cable connected. This protects the vehicle socket from dirt and damage.
- Make sure that the socket cover is closed properly before closing the socket flap. This can otherwise result in damage which may prevent the socket flap from being opened again.

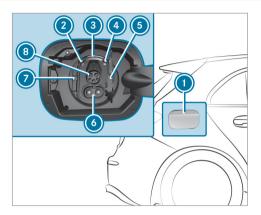

NOTE Damage to the vehicle socket or the charging cable connector due to incorrect handling

Do not use excessive force (maximum 67.4 lbf (300 N)) to insert the charging cable connector into the vehicle socket to the stop. You may otherwise damage the vehicle socket, the charging cable connector or their contacts.

If you feel there is increased resistance, pull the charging cable connector out of the socket and reinsert it.

Requirements:

- The transmission is in position **P**.
- The vehicle is unlocked or the distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).
- The vehicle has not been started.
- The charging cable is not taut.

Press the center rear section of socket flap
 (1) and swing the socket flap forwards and open.

The **r** indicator lamp **2** and status display **3** light up white.

When the vehicle is started (the READY display is lit in the Instrument Display), socket flap cannot be opened.

- Press catch () to the left and fold open socket cover ().
- (i) The CCS charging cable connector requires connections (a) and (a). Therefore, it is necessary to open both parts of socket cover (5)
- Insert the CCS charging cable connector into the vehicle socket to the stop.
 Make sure that the charging cable is not taut when inserted.
 - The indicator lamp (a) and status display (a) flash orange and, as soon as the highvoltage battery is charged, green.
- (i) When the charging sequence for the ambient lighting is activated, the ambient lighting lights up for approximately 30 seconds as with the
 [☐] indicator lamp () (→ page 129).

When the charging cable is connected to the vehicle, the vehicle cannot be started or moved.

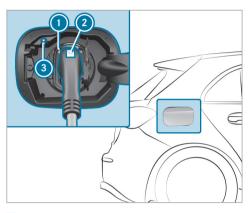

At the start of the charging process, the condition of charge display is shown in the Instrument Display with a charging prediction. The charging prediction either refers to the predicted condition of charge at the set departure time, or the time at which the high-voltage battery will be fully charged.

- (i) When the ignition is switched on, a lightning symbol appears next to the condition of charge display during the charging process.
- (i) Depending on the temperature, the fan and battery cooling system may audibly switch on during the charging process.
- i) If the vehicle is idle for lengthy periods and connected to the mains supply, the high-voltage battery will be recharged automatically as needed or when electrical consumers are activated (e.g. the pre-entry climate control).

Ending the direct current charging process (mode 4)

Requirements:

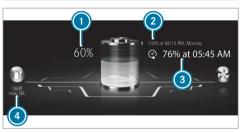

• The distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).

- Press charging interruption button (a).
 The charging process is ended. The formal indicator lamp (b) lights up white. The vehicle socket is unlocked.
- Press and hold button (2) on the charging cable connector and remove the charging cable connector from the vehicle socket.

- (i) If you cannot remove the charging cable connector, unlock the vehicle and repeat the procedure. If the charging cable connector is still locked, contact a qualified specialist workshop.
- Close the socket cover and the socket flap.
- After the charging cable connector has been disconnected, the left indicator lamp on on the vehicle socket remains lit for some time before switching off.

Function of the charge level display in the Instrument Display

- Current charge level
- Itime at which completely charged
- Predicted charge level at pre-selected departure time
- Ourrent charging capacity

When the vehicle is connected to the mains supply and is switched off, the Instrument Display shows the charge level display for approximately two minutes.

The value for current charging capacity () may differ from the display on the charging station. At

a charging capacity of 10 kW or higher, the value in the charge level display is rounded off and shown without a decimal place.

(i) The value in item (a) varies depending on the setting of the charging process. It displays the charging prediction, e.g. the time at which the selected charge level will be reached or the charge level at the pre-selected departure time.

Configuring the charging settings

Multimedia system:

Setting the departure time

The set departure times are used for the vehicle's pre-entry climate control and for predictions regarding the approximate state of charge and range at the time selected. The charging process always starts immediately, irrespective of the next departure time.

Select Departure Time.

The following charging times can be selected:

- Off (no departure time)
- Once (XX)
- Week Profile
- Select a setting.

Setting a single departure time

- Select Departure Time.
- Select Once (XX).
- 🕨 Select 🚺 .
- Set a departure time.

Setting the week profile

- Select Departure Time.
- Select Week Profile.
- 🕨 Select 🚺.
- Add New Time
- Set the desired departure times, e.g. every day at 8 a.m.
- Select OK.

Searching for charging stations

- Select Search for Charging Stations.
- Enter the search term and select Charging Station.

Setting the maximum charging current

- Select Home, Work or Standard.
- Select Maximum Charge Current.
- Select Maximum, 8 Amps or 6 Amps.
 When the high-voltage battery is charged, the charging current is limited to the selected amperage.
- i) The value of the maximum charging current depends on the fixed value charging cable which was provided.

Setting the maximum state of charge

- Select Home, Work or Standard.
- Select Maximum State of Charge.
- Set the desired percentage.
 The high-voltage battery is charged up to the set percentage as a maximum.

(i) The percentage can be set in increments of 10%.

A maximum state of charge of 80% is recommended. Higher maximum states of charge can diminish the longevity of the high-voltage battery (\rightarrow page 158).

(i) As soon as the full state of charge is reached, a notification is shown in the media display that the charging process is completed and the journey may be continued.

Unlocking the charging cable (mode 2, 3 or 4)

When the function is active, the charging cable is unlocked when the maximum state of charge is reached.

- Select Home or Work.
- Activate or deactivate Unlock Charging Cable.

Activating or deactivating location-based charging

If the function is active and pertinent addresses have been stored in the navigation destinations, the corresponding charging program is automatically selected as soon as the address is reached and parking position P is engaged.

Select Home or Work.

Activate or deactivate Select Based on Location.

Parking

Parking the vehicle

 WARNING Risk of accident and injury caused by an insufficiently secured vehicle rolling away

If the vehicle is not securely parked sufficiently, it can roll away in an uncontrolled way even at a slight downhill gradient.

- On uphill or downhill gradients, turn the front wheels so that the vehicle rolls towards the curb if it starts moving.
- Apply the parking brake.
- Switch the transmission to position **P**.

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

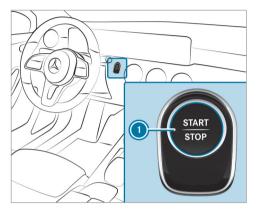

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the transmission position.
- starting the vehicle.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.

- **!** NOTE Damage to the vehicle due to it rolling away
- Always secure the vehicle against rolling away.
- (i) If you park the vehicle for a long period, observe the following notes:
 - Make sure the high-voltage battery has a sufficient condition of charge, especially at very low outside temperatures. In this way you can avoid any problems when the vehicle is subsequently started.
 - If possible, avoid parking spaces in direct sunlight.

Observe the notes on charging the high-voltage battery (\rightarrow page 158).

- Bring the vehicle to a standstill by pressing the brake pedal.
- On gradients, turn the front wheels so that the vehicle will roll towards the curb if it starts moving.
- Apply the electric parking brake.

- Engage transmission position \mathbf{P} in a stationary vehicle with the brake pedal applied (\rightarrow page 157).
- Switch off the vehicle by pressing button ①.
- Release the service brake slowly.
- Get out of the vehicle and lock it.
- (i) When you park the vehicle, you can still operate the side windows and the panoramic sliding sunroof for approximately four minutes if the driver's door is closed.

Garage door opener

Programming buttons for the garage door opener

 WARNING Risk of injury by becoming trapped when opening and closing a garage door

When you operate or program a garage door with an integrated garage door opener, persons can become trapped or struck by the garage door if they stand within its range of movement. Always make sure that nobody is within the range of the garage door's movement.

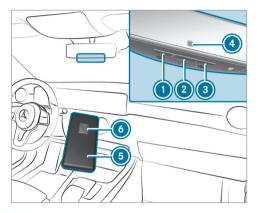

Only operate the following doors using the garage door opener:

- Doors with a safety stop and reversing feature
- Doors which conform to the current U.S. safety standards

Before programming the garage door opener, park the vehicle outside the garage. Make sure that the vehicle is switched on but not started.

Requirements:

- The vehicle has been parked outside the garage or outside the range of movement of the door.
- The vehicle is switched on.
- The vehicle has not been started.
- (i) The garage door opener function is always available when the vehicle is switched on.

Check if the transmitter frequency of the remote control has the frequency range of 280 to 868 MHz.

Radio equipment approval number:

- NZLMUAHL5 (USA)
- 4112A-MUAHL5 (Canada)

- Press and hold button (1), (2) or (3) that you wish to program.
 Indicator lamp (4) flashes yellow.
- (i) It can take up to 20 seconds before the indicator lamp flashes yellow.
- Point remote control (3) from a distance of 0.4 in (1 cm) to 3 in (8 cm) towards button (1), (2) or (3).
- Press and hold button (6) of remote control
 (6) until one of the following signals appears:
 - Indicator lamp () lights up green continuously. Programming is complete.
 - Indicator lamp (a) flashes green. Programming was successful. Additionally, synchronization of the rolling code with the door system must be carried out.
- If indicator lamp () does not light up or flash green: repeat the procedure.
- Release all of the buttons.

(i) The remote control for the door drive is not included in the scope of delivery of the garage door opener.

Synchronizing the rolling code

Requirements:

- The door system uses a rolling code.
- The vehicle must be within range of the garage door or door drive.
- The vehicle as well as persons and objects are located outside the range of movement of the door.
- Press the programming button on the door drive unit.

Initiate the next step within approximately 30 seconds.

- Press previously programmed button (), () or () repeatedly until the door closes. When the door closes, programming is completed.
- (i) Please also read the operating instructions for the door drive.

Troubleshooting when programming the remote control

- Check if the transmitter frequency of remote control (5) is supported.
- Replace the batteries in remote control (5).
- Hold remote control (5) at various angles from a distance of 0.4 in (1 cm) to 3 in (8 cm) front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- Hold remote control (s) at the same angles at various distances in front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- On remote controls that transmit only for a limited period, press button (a) on remote control (b) again before transmission ends.
- Angle the antenna line of the garage door opener unit towards the remote control.
- (i) It is possible that older garage doors cannot be operated using the remote control in the inside rearview mirror even after you have successfully performed the measures descri-

bed above. If this is the case, contact the ${\sf HomeLink}^{\textcircled{R}}$ Hotline.

- Support and additional information on programming:
 - On the toll free HomeLink[®] Hotline on 1-800-355-3515
 - On the Internet at https:// www.homelink.com/mercedes

Opening or closing the garage door

Requirements:

- The corresponding button is programmed to operate the door.
- Press and hold buttons ①, ② or ③ until the door opens or closes.
- If indicator lamp (a) flashes yellow after approximately 20 seconds: press and hold the previously pressed button again until the door opens or closes.

Clearing the garage door opener memory

Press and hold buttons ① and ③.
 Indicator lamp ④ lights up yellow.

 If indicator lamp () flashes green: release buttons () and (3).
 The entire memory has been deleted.

Electric parking brake

Function of the electric parking brake (applying automatically)

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- releasing the parking brake.
- changing the transmission position.

- starting the vehicle.
- Never leave children unattended in the vehicle.
- ► When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.

The electric parking brake is applied if the transmission is in position [P] and one of the following conditions is fulfilled:

- The vehicle is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver's seat and the driver's door is opened.
- (i) To prevent application: pull the handle of the electric parking brake (\rightarrow page 179).

In the following situations, the electric parking brake is also applied:

• The HOLD function is keeping the vehicle stationary.

- Active Parking Assist is keeping the vehicle stationary.
- Active Distance Assist DISTRONIC is bringing the vehicle to a standstill.
- In addition, one of the following conditions must be fulfilled:
 - The vehicle is switched off.
 - The seat belt tongue is not inserted in the seat belt buckle of the driver's seat and the driver's door is opened.
 - There is a system malfunction.
 - The power supply is insufficient.
 - The vehicle is stationary for a lengthy period.

When the electric parking brake is applied, the red **PARK** (USA) or ((Canada) indicator lamp lights up in the instrument cluster.

Function of the electric parking brake (releasing automatically)

The electric parking brake is released when the following conditions are fulfilled:

• The driver's door is closed.

- The vehicle has been started.
- The transmission is in position D or R and you depress the accelerator pedal or you shift from transmission position P to D or R when on level ground.
- If the transmission is in position **R**, the tailgate must be closed.
- The seat belt tongue is inserted into the seat belt buckle of the driver's seat.

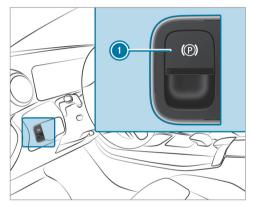

If the seat belt tongue is not inserted into the seat belt buckle of the driver's seat, one of the following conditions must be fulfilled:

- You shift from transmission position **P**. or
- You have previously driven at speeds greater than 2 mph (3 km/h).

When the electric parking brake is released, the red \fbox{PARK} (USA) or $\fbox{(D)}$ (Canada) indicator lamp in the instrument cluster goes out.

Applying/releasing the electric parking brake manually

Applying

Push handle ①. The red PARK (USA) or ② (Canada) indicator lamp lights up in the instrument cluster. (i) The electric parking brake is only securely applied if the red **PARK** (USA) or (**(P)** (Canada) indicator lamp is lit continuously.

Releasing

- Switch on the vehicle.
- Pull handle 🕦.

The red **PARK** (USA) or **(D)** (Canada) indicator lamp in the instrument cluster goes out.

Emergency braking

Press and hold handle ①. As long as the vehicle is driving, the Please Release Parking Brake message is displayed and the red PARK (USA) or ⑦ (Canada) indicator lamp flashes.

When the vehicle has been braked to a standstill, the electric parking brake is applied. The red **PARK** (USA) or **(O)** (Canada) indicator lamp lights up in the instrument cluster.

Information on collision detection on a parked vehicle

If a collision is detected when the tow-away alarm is armed on a locked vehicle, you will receive a notification in the multimedia system when you switch the vehicle on.

You will receive information about the following points:

- The area of the vehicle that may have been damaged.
- The force of the impact.

The following situation can lead to inadvertent activation:

- The parked vehicle is moved, for example, in a two-story garage.
- (i) Deactivate the tow-away alarm in order to prevent inadvertent activation. If you deactivate the tow-away alarm, collision detection will also be deactivated.

(i) If the battery is severely discharged, the function for detecting a collision on a parked vehicle is automatically deactivated to facilitate the next engine start.

System limits

Detection may be restricted in the following situations:

- The vehicle is damaged without impact, for example, if an outside mirror is torn off or the paint is damaged by a key
- An impact occurs at low speed
- The electric parking brake is not applied

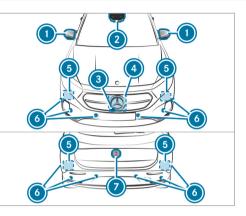

Driving and driving safety systems Driving systems and your responsibility

Your vehicle is equipped with driving systems which assist you in driving, parking and maneuvering the vehicle. The driving systems are only aids. They are not a substitute for your attention to the surroundings and do not relieve you of your responsibility pertaining to road traffic law. The driver is always responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane. Pay attention to the traffic conditions at all times and intervene when necessary. Be aware of the limitations regarding the safe use of these systems.

Driving systems can neither reduce the risk of accident if you fail to adapt your driving style nor override the laws of physics. They cannot always take into account road, weather or traffic conditions.

Information on vehicle sensors and cameras

Some driving and driving safety systems use cameras as well as radar or ultrasonic sensors to monitor the area in front of, behind or next to the vehicle.

- Multifunction camera
- Cameras in the outside mirrors
- 3 Front radar
- In Front camera
- 6 Corner radars
- Oltrasonic sensors
- Rear view camera

▲ WARNING Risk of accident due to restricted detection performance of vehicle sensors and cameras

If the area around vehicle sensors or cameras is covered, damaged or dirty, certain driving and safety systems cannot function correctly. There is a risk of an accident.

- Keep the area around vehicle sensors or cameras clear of any obstructions and clean.
- Have damage to the bumper, radiator grille or stone chipping in the area of the front and rear windows repaired at a qualified specialist workshop.

Particularly, keep the areas around the sensors and cameras free of dirt, ice or slush (\rightarrow page 289). The sensors and cameras must not be covered and the detection ranges around them must be kept free. Do not attach additional license plate bracket, advertisements, stickers, foils or foils to protect against stone chippings in the detection range of the sensors and cameras. Make sure that there are no overhanging loads protruding into the detection range.

If there is damage to a bumper or the radiator grille, or after an impact, have the function of the sensors checked at a qualified specialist workshop. Have damage or stone chipping in the area of the cameras on the front and rear windows repaired at a qualified specialist workshop.

Overview of driving systems and driving safety systems

- ABS (Anti-lock Braking System) (→ page 182)
- BAS (**B**rake **A**ssist **S**ystem) (\rightarrow page 182)
- ESP[®] (Electronic Stability Program) (→ page 182)
- ESP[®] Crosswind Assist (\rightarrow page 183)
- EBD (Electronic Brakeforce Distribution) (→ page 184)
- STEER CONTROL (\rightarrow page 184)
- HOLD function (\rightarrow page 184)
- Hill Start Assist (\rightarrow page 186)
- ATTENTION ASSIST (\rightarrow page 186)

- Cruise control (\rightarrow page 188)
- Traffic Sign Assist (\rightarrow page 205)

Driving Assistance package

The following functions are part of the Driving Assistance Package. Certain functions are only available in some countries. Some functions are also available without the Driving Assistance Package, albeit with restricted functionality.

- Active Distance Assist DISTRONIC (→ page 189)
- Active Speed Limit Assist (country-dependent) (→ page 194)
- Route-based speed adaptation (countrydependent) (→ page 194)
- Active Brake Assist (\rightarrow page 200)
- Active Steering Assist (country-dependent) (→ page 196)
- Active Emergency Stop Assist (countrydependent) (→ page 198)
- Active Lane Change Assist (country-dependent) (→ page 199)

- Blind Spot Assist and Active Blind Spot Assist with exit warning (→ page 209)
- Active Lane Keeping Assist (\rightarrow page 211)

Parking Package

- Rear view camera (\rightarrow page 213)
- Surround view camera (\rightarrow page 216)
- Parking Assist PARKTRONIC (\rightarrow page 218)
- Active Parking Assist (\rightarrow page 223)

Functions of ABS

The Anti-lock Brake System (ABS) regulates the brake pressure in critical driving situations:

- During braking, for instance, at maximum fullstop braking or if there is insufficient tire traction, the wheels are prevented from locking.
- Vehicle steerability while braking is ensured.

If ABS intervenes when braking, you will feel a pulsing in the brake pedal. The pulsating brake pedal can be an indication of hazardous road conditions and can serve as a reminder to take extra care while driving.

System limits

- ABS is active from speeds of approx. 3 mph (5 km/h).
- ABS may be impaired or may not function if a malfunction has occurred and the yellow () ABS warning lamp lights up continuously after the vehicle is started.

Function of BAS

WARNING Risk of an accident caused by a malfunction in BAS (Brake Assist System)

If BAS is malfunctioning, the braking distance in an emergency braking situation is increased.

Depress the brake pedal with full force in emergency braking situations. ABS prevents the wheels from locking.

The Brake Assist System (BAS) supports your emergency braking situation with additional brake force.

If you depress the brake pedal quickly, BAS is activated:

- BAS automatically boosts the brake pressure.
- BAS can shorten the braking distance.
- ABS prevents the wheels from locking.

The brakes will function as usual once you release the brake pedal. BAS is deactivated.

Functions of ESP®

WARNING Risk of skidding if ESP[®] is deactivated

If you deactivate $\mathsf{ESP}^{\circledast}, \mathsf{ESP}^{\circledast}$ cannot carry out vehicle stabilization.

 ESP[®] should only be deactivated in the following situations.

The Electronic Stability Program (ESP®) can monitor and improve driving stability and traction in the following situations within physical limits:

- When pulling away on wet or slippery road.
- When braking.

If the vehicle deviates from the direction desired by the driver, ESP^{\circledast} can stabilize the vehicle by intervening in the following ways:

- One or more wheels are braked.
- The drive output is adapted according to the situation.

 $\mathsf{ESP}^{\circledast}$ is deactivated if the $\fbox{}_{\mathsf{FF}}$ $\mathsf{ESP}^{\circledast}$ OFF warning lamp lights up continuously in the instrument cluster.

Observe the following points when $\ensuremath{\mathsf{ESP}}^\ensuremath{^{(\!\!\!\!\ensuremath{\mathsf{R}})}}$ is deactivated:

- Driving stability will no longer be improved.
- The drive wheels could spin.
- ETS/4ETS traction control is still active.
- (i) When ESP[®] is deactivated, you are still assisted by ESP[®] when braking.

If the ESP[®] warning lamp flashes in the instrument cluster, one or several wheels has reached its grip limit:

• Adapt the driving style to suit the prevailing road and weather conditions.

- Do not deactivate ESP[®] under any circumstances.
- Only depress the accelerator pedal as far as is necessary.

It may be best to deactivate ESP^\circledast in the following situations:

- When using snow chains.
- In deep snow.
- On sand or gravel.
- (i) Spinning the wheels results in a cutting action, which enhances traction.

If the \fbox{ESP}^{\circledast} warning lamp lights up continuously, ESP^{\circledast} is not available due to a malfunction.

Observe the following information:

- Warning and indicator lamps (\rightarrow page 402)
- Display messages (\rightarrow page 353)

ETS/4ETS (Electronic Traction System)

ETS/4ETS traction control is part of ESP^{\otimes} and makes it possible to pull away and accelerate on a slippery road.

ETS/4ETS can improve the vehicle's traction by intervening in the following ways:

- The drive wheels are braked individually if they spin.
- More drive torque is transferred to the wheel or wheels with traction.

Influence of drive programs on ESP®

The drive programs enable ESP[®] to adapt to different weather and road conditions as well as the driver's preferred driving style. Depending on the selected drive program, the appropriate ESP[®] mode will be activated. You can select the drive programs using the DYNAMIC SELECT switch (\rightarrow page 155).

Function of ESP® Crosswind Assist

 $\mathsf{ESP}^{\circledast}$ Crosswind Assist detects sudden gusts of side wind and helps the driver to keep the vehicle in the lane:

• ESP[®] Crosswind Assist is active at vehicle speeds above approx. 50 mph (80 km/h) when driving straight ahead or cornering slightly.

• The vehicle is stabilized by means of individual brake application on one side.

Activating/deactivating ESP[®] (Electronic Stability Program)

Multimedia system:

- → 🕞 >> Settings >> Quick Access
- (i) ESP[®] can only be activated/deactivated using quick access when at least one other function is available in quick access. ESP[®] can otherwise be found in the Assistance menu.

! NOTE Mercedes-AMG vehicles

- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.
- Select ESP.
- Select On or 👫 Off.

 $\mathsf{ESP}^{\circledast}$ is deactivated if the $\fbox{}_{\mathsf{FF}}$ $\mathsf{ESP}^{\circledast}$ OFF warning lamp lights up continuously in the instrument cluster.

Observe the information on warning lamps and display messages which may be shown in the instrument cluster.

Function of EBD

Electronic Breakforce Distribution (EBD) is characterized by the following:

- Monitoring and regulating the brake pressure on the rear wheels.
- Improved driving stability when braking, especially on bends.

Function of STEER CONTROL

STEER CONTROL assists you by transmitting a noticeable steering force to the steering wheel in the direction required for vehicle stabilization.

This steering recommendation is given in the following situations:

- Both right wheels or both left wheels are on a wet or slippery road surface when you brake
- The vehicle starts to skid

System limits

STEER CONTROL may be impaired or may not function in the following situations:

- ESP[®] is deactivated.
- ESP[®] is malfunctioning.
- The steering is malfunctioning.

If $\ensuremath{\mathsf{ESP}}^{\ensuremath{\texttt{\$}}}$ is malfunctioning, you will be assisted further by the electric power steering.

HOLD function

HOLD function

The HOLD function holds the vehicle at a standstill without requiring you to depress the brake pedal, e.g. while waiting in traffic.

The HOLD function is only an aid. The responsibility for the vehicle safely standing still remains with the driver.

System limits

The HOLD function is only intended to provide assistance when driving and is not a sufficient means of safeguarding the vehicle against rolling away when stationary. • The incline must not be greater than 30%.

Activating/deactivating the HOLD function

 WARNING Risk of an accident due to the HOLD function being active when you leave the vehicle

If the vehicle is only braked with the HOLD function it could, in the following situations, roll away:

- If there is a malfunction in the system or in the power supply.
- If the HOLD function is deactivated by depressing the accelerator pedal or brake pedal, e.g. by a vehicle occupant.
- Always secure the vehicle against rolling away before you leave it.

Requirements:

- The vehicle is stationary.
- The driver's door is closed or the seat belt on the driver's side is fastened.
- The vehicle has been started.
- The electric parking brake is released.

- Active Distance Assist DISTRONIC is deactivated.
- The transmission is in position **D**, **R** or **N**.

Activating the HOLD function

- Depress the brake pedal, and after a short time quickly depress further until the HOLD display appears in the Instrument Display.
- Release the brake pedal.

Deactivating the HOLD function

- Depress the accelerator pedal to pull away.
- Depress the brake pedal until the HOLD display disappears from the Instrument Display.

The HOLD function is deactivated in the following situations:

- Active Distance Assist DISTRONIC is activated.
- The transmission is shifted to position $\ensuremath{\mathbb{P}}$.
- The vehicle is secured with the electric parking brake.

In the following situations, the vehicle is held by transmission position $[\mathbf{P}]$ and/or by the electric parking brake:

- The seat belt is unfastened and the driver's door is opened.
- The vehicle is switched off.
- There is a system malfunction.
- The power supply is insufficient.

Function of the intelligent creeping mode

The intelligent creeping mode assists you when pulling away, maneuvering and parking on uphill or downhill inclines. When the brake pedal is released, the vehicle rolls in the direction of the engaged transmission position. The crawler torque is adapted to the uphill incline.

In recuperation level \boxed{D} [Auro] (\rightarrow page 151) the intelligent creeping mode also assists you up to speeds of approximately 12 mph (20 km/h), by following the vehicle in front at approximately the same speed.

The intelligent creeping mode is only an aid. The driver is responsible for maintaining a sufficient distance to the vehicle in front.

System limits

The intelligent creeping mode does not automatically stop the vehicle if the vehicle in front stops. Bring the vehicle to a standstill using the brake pedal.

Function of Hill Start Assist

Hill Start Assist holds the vehicle for a short time when pulling away on a hill under the following conditions:

- The transmission is in position **D** or **R**.
- The electric parking brake is released.

This gives you enough time to move your foot from the brake pedal to the accelerator pedal and depress it before the vehicle begins to roll away. **WARNING** Risk of accident and injury due to the vehicle rolling away

After a short time, Hill Start Assist no longer holds the vehicle.

Swiftly move your foot from the brake pedal to the accelerator pedal. Do not leave the vehicle when it is being held by Hill Start Assist.

ATTENTION ASSIST

Function of ATTENTION ASSIST

ATTENTION ASSIST assists you on long, monotonous journeys, e.g. on highways and trunk roads. If ATTENTION ASSIST detects indicators of fatigue or increasing lapses in concentration on the part of the driver, it suggests taking a break.

ATTENTION ASSIST is only an aid. It cannot always detect fatigue or lapses in concentration in time. The system is not a substitute for a well-rested and attentive driver. On long journeys, take regular breaks in good time that allow for adequate recuperation. You can choose between two settings:

- Standard: normal system sensitivity.
- Sensitive: higher system sensitivity. The driver is warned earlier and the attention level detected by ATTENTION ASSIST is adapted accordingly.

If drowsiness or increasing lapses in concentration are detected, the ATTENTION ASSIST: Take a Break! warning appears in the Instrument Display. You can acknowledge the message and take a break if necessary. If you do not take a break and ATTENTION ASSIST continues to detect increasing lapses in concentration, you will be warned again after a minimum of 15 minutes.

You can have the following status information for ATTENTION ASSIST displayed in the assistance menu of the on-board computer:

- The length of the journey since the last break.
- The attention level determined by ATTENTION ASSIST:
 - The fuller the circle, the higher the attention level determined
 - As your attention wanes, the circle in the center of the display becomes smaller

If ATTENTION ASSIST is unable to calculate the attention level and cannot issue a warning, the **System Suspended** message appears.

If a warning is given in the Instrument Display, the multimedia system offers to search for a rest area. You can select a rest area and start navigation to this rest area. This function can be activated and deactivated in the multimedia system.

If ATTENTION ASSIST is deactivated, the symbol appears in the assistance graphic in the Instrument Display. After the vehicle is started, ATTENTION ASSIST is automatically activated. The last selected sensitivity level remains stored.

System limits

ATTENTION ASSIST is active in the 37 mph (60 km/h) to 124 mph (200 km/h) speed range.

Particularly in the following situations, ATTENTION ASSIST only functions in a restricted manner and warnings may be delayed or not occur:

- If you have been driving for less than approximately 30 minutes.
- If the road condition is poor (uneven road surface or potholes).
- If there is a strong side wind.
- If you adopt a sporty driving style (high cornering speeds or high rates of acceleration).
- If Active Steering Assist is activated and active (→ page 196).
- If the time has been set incorrectly.
- If you change lanes and vary your speed frequently in active driving situations.

The ATTENTION ASSIST drowsiness or alertness assessment is reset and restarted when continuing the journey in the following situations:

• You switch off the vehicle.

• If you unfasten your seat belt and open the driver's door (e.g. to change drivers or take a break).

Setting ATTENTION ASSIST

Multimedia system:

→ 🕞 >> Settings >> Assistance >> Attention Assist

Setting options

Select Standard, Sensitive or Off.

Suggesting a rest area

- Select Suggest Rest Area.
- Activate or deactivate the function. If ATTENTION ASSIST detects fatigue or increasing lack of attention, it suggests a rest area in the vicinity.
- Select the suggested rest area.
 You are guided to the selected rest area.

Speed control cruise control

Function of cruise control

Cruise control regulates the speed to the value selected by the driver.

If you accelerate to overtake, for example, the stored speed is not deleted. If you remove your foot from the accelerator pedal after overtaking, cruise control will resume speed regulation back to the stored speed.

You can store any speed above 15 mph (20 km/h) up to the maximum design speed. In drive program [E], the adjustable speed is limited to 81 mph (130 km/h).

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (\rightarrow page 180).

Mercedes-AMG vehicles: Cruise control is available up to a maximum speed of 155 mph (250 km/h).

Displays in the Instrument Display

- (gray): cruise control is selected but not yet activated.
- (green): cruise control is active.

A stored speed appears along with the \fbox display.

(i) The segments between the stored speed and the end of the segment display light up in the speedometer.

System limits

Cruise control may be unable to maintain the stored speed on uphill gradients. The stored speed is resumed when the gradient evens out.

Increase recuperation in good time on long and steep downhill gradients. Take particular note of this when driving a laden vehicle. By doing so, you will make use of the electric motor's braking effect to charge the high-voltage battery. This relieves the load on the brake system and prevents the brakes from overheating and wearing too quickly.

Do not use cruise control in the following situations:

• In traffic situations which require frequent changes of speed, e.g. in heavy traffic, on winding roads

- On slippery roads. Accelerating can cause the drive wheels to lose traction and the vehicle could then skid.
- When visibility is poor

Operating cruise control

WARNING Risk of accident due to stored speed

If you call up the stored speed and this is lower than your current speed, the vehicle decelerates.

Take into account the traffic situation before calling up the stored speed.

Requirements:

- ESP[®] must be activated, but not intervening.
- The vehicle speed is at least 15 mph (20 km/h).
- The transmission is in position $\ensuremath{\mathbb{D}}$.

Operating cruise control

 Press the rocker switches on the steering wheel control panel up or down to the desired position.

Activating cruise control

Activating cruise control

Press rocker switch ① up SET/+ or down SET/-.

The current speed is stored and maintained by the vehicle.

or

 Select [RES/P] with the left rocker switch. The last stored speed is called up and maintained by the vehicle.

If the last stored speed has previously been deleted, the current vehicle speed is stored.

(i) When you switch off the vehicle, the last speed stored is deleted.

Increasing or decreasing the stored speed

- 1 mph (1 km/h): press rocker switch ① up SET/+ or down SET/- to the pressure point.
- or

or

- 5 mph (10 km/h): press rocker switch () up SET/+) or down SET/- beyond the pressure point.
- Accelerate the vehicle to the desired speed and press rocker switch ① up SET/+.

Adopting a detected speed

- Activate cruise control.
- If a traffic sign has been detected and is displayed in the instrument cluster: select RESIP with the left rocker switch.

The maximum permissible speed shown by the traffic sign is stored and the vehicle maintains or does not exceed this speed.

Deactivating cruise control

Select **CNCL** with the left rocker switch.

Deactivating cruise control

- Select Select with the right rocker switch.
- (i) If you brake, deactivate ESP[®] or if ESP[®] intervenes, cruise control is deactivated.

Active Distance Assist DISTRONIC

Function of Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC maintains the set speed on free-flowing roads. If vehicles in front are detected, the set distance is maintained, if necessary, until the vehicle comes to a halt. The

vehicle accelerates or brakes depending on the distance to the vehicle in front and the set speed. The speed (from 15 mph (20 km/h)) and the distance to the vehicle in front are set and saved on the steering wheel.

The adjustable set speed can vary due to the following factors:

- Drive program selected $\boxed{\mathbf{E}}$ (\rightarrow page 153)
- Stored limit speed (e.g. winter tire limit)

Other features of Active Distance Assist DISTRONIC:

- Adjusts the driving style depending on the selected drive program (energy-saving, comfortable or dynamic) (→ page 153)
- Initiates acceleration to the stored speed if the turn signal indicator is switched on to change to the overtaking lane
- Vehicles with Driving Assistance Package:
 - Reacts to stationary vehicles detected in urban speed ranges (except bicycles and motorcycles)
 - Takes one-sided overtaking restrictions into account on highways or on multi-lane

roads with separate roadways (country-dependent)

Vehicles with Driving Assistance Package and

Parking Package: if the vehicle has been braked to a standstill on multi-lane, separate roadways by Active Distance Assist DISTRONIC, it can automatically follow the vehicle in front when driving off again within 30 seconds. If a critical situation is detected when driving off, a visual and acoustic warning is given indicating that the driver must now take control of the vehicle. The vehicle is not accelerated any further.

Active Distance Assist DISTRONIC displays in the Instrument Display

Assistance graphic

- Route-based speed adaptation: type of route event (→ page 194)
- Vehicle in front
- Oistance indicator
- Set specified distance
- Active Lane Change Assist lane change display

Permanent status display of Active Distance Assist DISTRONIC

- (white): Active Distance Assist DISTRONIC selected, specified distance set
- (white vehicle, green speedometer): Active Distance Assist DISTRONIC active, specified distance set and vehicle detected
- green): Active Distance Assist DISTRONIC active, specified distance set and vehicle detected
- \bigcirc : Route-based speed adaptation active $(\rightarrow page 194)$.

The stored speed is shown along with the permanent status display and highlighted on the speedometer. When Active Distance Assist DISTRONIC is passive, the speed is grayed out.

- (i) On highways or high-speed major roads, the green rest vehicle symbol is displayed cyclically when the vehicle is ready to pull away.
- (i) If you depress the accelerator pedal beyond the setting of the Active Distance Assist DISTRONIC, the system is switched to passive

mode. The **Suspended** message appears in the Instrument Display.

Display on the speedometer

The stored speed is highlighted on the speedometer. If the speed of the vehicle in front or the speed adjustment for the route event ahead is less than the stored speed, the segments in the speedometer light up. The Instrument Display shows the deactivation of Active Distance Assist DISTRONIC, as well as alterations to the speed due to manual or automatic adoption of the maximum permissible speed.

System limits

The system may be impaired or may not function in the following situations, for example:

- In snow, rain, fog, heavy spray, if there is glare, in direct sunlight or in greatly varying ambient light.
- The windshield in the area of the camera is dirty, fogged up, damaged or covered.
- If the radar sensors are dirty or covered.
- In parking garages or on roads with steep uphill or downhill gradients.

• If there are narrow vehicles in front, such as bicycles or motorcycles.

In addition, on slippery roads, braking or accelerating can cause one or several wheels to lose traction and the vehicle could then skid.

Do not use Active Distance Assist DISTRONIC in these situations.

 WARNING Risk of accident from acceleration or braking by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC may accelerate or brake in the following cases, for example:

- If the vehicle pulls away using Active Distance Assist DISTRONIC.
- If the stored speed is called up and is considerably faster or slower than the currently driven speed.
- If Active Distance Assist DISTRONIC no longer detects a vehicle in front or does not react to relevant objects.

- Always carefully observe the traffic conditions and be ready to brake at all times.
- Take into account the traffic situation before calling up the stored speed.
- WARNING Risk of accident due to insufficient deceleration by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC brakes your vehicle with up to 50% of the possible deceleration. If this deceleration is not sufficient, Active Distance Assist DISTRONIC alerts you with a visual and acoustic warning.

- Adjust your speed and maintain a suitable distance from the vehicle in front.
- Brake the vehicle yourself and/or take evasive action.

 WARNING Risk of accident if detection function of Active Distance Assist DISTRONIC is impaired

Active Distance Assist DISTRONIC does not react or has a limited reaction:

- when driving on a different lane or when changing lanes
- to pedestrians, animals, bicycles or stationary vehicles, or unexpected obstacles
- to complex traffic conditions
- to oncoming vehicles and crossing traffic

As a result, Active Distance Assist DISTRONIC may neither give warnings nor intervene in such situations.

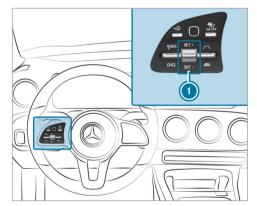

Always observe the traffic conditions carefully and react accordingly.

Operating Active Distance Assist DISTRONIC

Requirements:

- The electric parking brake is released.
- ESP[®] is activated and is not intervening.

- The transmission is in position **D**.
- The driver's door is closed.
- Check of the radar sensor system has been successfully completed.
- Parking Assist PARKTRONIC is not being used to park the vehicle or to exit from a parking space.

To operate Active Distance Assist DISTRONIC: press the rocker switches on the steering wheel control unit up or down to the desired position.

Activating/deactivating Active Distance Assist DISTRONIC

Press the state button.

Activating Active Distance Assist DISTRONIC

- To activate without a stored speed: press rocker switch () up SET/+ or down SET/-, or select RES/9 with the left rocker switch.
- or
- ► To activate with a stored speed: select RESI® with the left rocker switch.
- Remove your foot from the accelerator pedal. The current speed is stored and maintained by the vehicle.

Adopting a detected speed limit

Activate Active Distance Assist DISTRONIC.

If a traffic sign has been detected and is displayed in the instrument cluster: select RESIP with the left rocker switch.

The maximum permissible speed on the traffic sign is adopted as the stored speed. The vehicle adapts its speed to that of the vehicle in front, but only up to the stored speed.

Pulling away with Active Distance Assist DISTRONIC

- Activate Active Distance Assist DISTRONIC and remove your foot from the brake pedal.
- Select RES/ with the left rocker switch.

or

Depress the accelerator pedal briefly and firmly.

The functions of Active Distance Assist DISTRONIC continue to be carried out.

Deactivating Active Distance Assist DISTRONIC

▲ WARNING Risk of an accident due to Active Distance Assist DISTRONIC being active when you leave the driver's seat

If you leave the driver's seat while the vehicle is being braked by Active Distance Assist DISTRONIC only, the vehicle can roll away.

- Always deactivate Active Distance Assist DISTRONIC and secure the vehicle to prevent it from rolling away before you leave the driver's seat.
- Select **CNCL** with the left rocker switch.
- If you brake, deactivate ESP[®] or if ESP[®] intervenes, Active Distance Assist DISTRONIC is deactivated.

Increasing or decreasing the speed

- 1 mph (1 km/h): press rocker switch () up SET/+ or down SET/- to the pressure point. or
- 5 mph (10 km/h): press rocker switch () up SET/+) or down SET/- beyond the pressure point.

- or
- Accelerate the vehicle to the desired speed and press rocker switch () up SET/+.
 Changing the specified distance to the vehicle in front
- **To reduce the specified distance:** press the right rocker switch up (
- **To increase the specified distance:** press the right rocker switch down (

Function of Active Speed Limit Assist

If a change in the speed limit of 12 mph (20 km/h) or more is detected and automatic adoption of speed limits is activated, the new speed limit is automatically adopted as the stored speed (\rightarrow page 206).

The driven speed is adjusted when the vehicle is level with the traffic sign at the latest. In the case of signs indicating entry into an urban area, the speed is adapted according to the speed permitted within the urban area. The speed limit display in the Instrument Display is always updated when the vehicle is level with the traffic sign. If there is no speed restriction on an unlimited stretch of road (e.g. on a freeway), the recommended speed is automatically adopted as the stored speed. The system uses the speed stored on an unlimited stretch of road as the recommended speed. If you do not alter the stored speed on an unlimited stretch of road, the recommended speed is 80 mph (130 km/h).

If Active Distance Assist DISTRONIC has been put into passive mode by pressing the accelerator pedal, only speed limits which are higher than the set speed are adopted.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (\rightarrow page 180).

System limits

The system limits of Traffic Sign Assist apply to the detection of traffic signs (\rightarrow page 205).

Speed limits below 12 mph (20 km/h) are not automatically adopted by the system as the stored speed. Temporary speed restrictions (e.g. for a certain time or due to weather conditions) cannot be properly detected by the system. The maximum permissible speed applying to a vehicle with a trailer is not detected by the system.

Adjust the speed in these situations.

 WARNING Risk of accident due to Active Speed Limit Assist adapting the vehicle's speed

The speed adopted by Active Speed Limit Assist may be too high or incorrect in some individual cases, such as:

- at speed limits below 12 mph (20 km/h)
- in wet conditions or in fog
- · when towing a trailer
- Ensure that the driven speed complies with traffic regulations.
- Adjust the driving speed to suit current traffic and weather conditions.

Function of route-based speed adaptation

When Active Distance Assist DISTRONIC is activated, the vehicle speed will be adapted accordingly to the route events ahead. Depending on the drive program selected, the vehicle negotiates a route event ahead in an economical, comfortable or dynamic manner. When the route event has been passed, the vehicle accelerates again to the stored speed. The set distance to the vehicle in front, vehicles detected ahead and speed restrictions ahead are taken into account.

You can activate and deactivate route-based speed adaptation in the multimedia system (\rightarrow page 196).

The following route events are taken into account:

- Curves
- T-intersections, roundabouts and toll plazas
- Turns and exits
- Traffic jams ahead (only with Live Traffic Information)
- (i) When the toll station is reached, Active Distance Assist DISTRONIC adopts the speed as the stored speed.

Also, the speed is reduced if the turn signal indicator to change lanes is switched on and one of the following situations is detected:

• Turning off at intersections

- Driving on slowing-down lanes
- Driving on lanes adjacent to slowing-down lanes

The driver is responsible for choosing the right speed and observing other road users. This applies in particular to intersections, roundabouts and traffic lights, as route-based speed adaptation does not brake the vehicle to a standstill.

When route guidance is active, the first speed adjustment is carried out automatically. If the turn signal indicator is switched on, the selected route is confirmed and further speed adjustment is activated.

Speed adaptation is canceled in the following cases:

- If the turn signal indicator is switched off before the route event.
- If the driver depresses the accelerator or brake pedal during the process.

System limits

Route-based speed adaptation does not take right of way regulations into account. The driver is

responsible for complying with road traffic regulations and driving at a suitable speed.

The speed adaptation made by the system may not always be suitable, particularly in the following situations:

- The road's course not clearly visible
- Road narrowing
- Varying maximum permissible speeds in individual lanes, for example at toll plazas
- Wet road surfaces, snow or ice

In these situations the driver must intervene accordingly.

WARNING Risk of accident in spite of route-based speed adaptation

Route-based speed adaptation can malfunction or be temporarily unavailable in the following situations:

- If the driver does not follow the calculated route
- If map data is not up-to-date or available

- In the event of roadworks
- In bad weather or road conditions
- If the accelerator pedal is depressed
- In the event of electronically displayed speed limitations
- Adapt the speed to the traffic situation.

Setting route-based speed adaptation

Requirements:

- Active Distance Assist DISTRONIC is activated.
- ECO Assist is active.

Multimedia system:

- Activate or deactivate the function. When the function is active, the vehicle speed is adjusted depending on the route events ahead.
- (i) Further information on the route-based speed adaptation (\rightarrow page 194).

Active Steering Assist

Function of Active Steering Assist

The system helps you to stay in the center of the lane by means of moderate steering interventions. Depending on the speed driven, Active Steering Assist uses the vehicles ahead and lane markings as a reference.

i) Depending on the country, in the lower speed range Active Steering Assist can use the surrounding traffic as a reference. If necessary, Active Steering Assist can then also provide assistance when driving away from the center of the lane, for example, to form a rescue lane.

If the detection of lane markings and vehicles ahead is impaired, Active Steering Assist switches to passive mode. The system provides no support in this case.

Status display of Active Steering Assist in the Instrument Display

- (gray): activated and passive
- (green): activated and active
- (red): system limits detected

- (white, red hands): "hands on the steering wheel" prompt
- During the transition from active to passive status, the symbol is shown as enlarged and flashing. Once the system is passive, the symbol is shown as gray in the Instrument Display.
- (i) Depending on the selected vehicle settings, Active Steering Assist may be unavailable.

Steering and touch detection

The driver is required to keep their hands on the steering wheel at all times and be able to intervene at any time to correct the course of the vehicle and keep it in lane. The driver must expect a change from active to passive mode or vice versa at any time.

If the system detects that the driver has not steered the vehicle for a considerable period of time or has removed their hands from the steering wheel, display () appears. If the driver still does not steer the vehicle, a warning tone sounds in addition to the visual warning message.

If the driver does not react to the warning for a considerable period, the system can initiate an emergency stop (\rightarrow page 198).

The warning is not issued or is stopped when the driver gives confirmation to the system:

• The driver steers the vehicle.

• Depending on the country: the driver presses a steering wheel button or operates Touch Control

If Active Steering Assist detects that a system limit has been reached, a visual warning is issued and a warning tone sounds.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (\rightarrow page 180).

System limits

Active Steering Assist has a limited steering torque for lateral guidance. In some cases, the steering intervention is not sufficient to keep the vehicle in the lane or to drive through exits.

The system may be impaired or may not function in the following instances:

- There is poor visibility, e.g. due to snow, rain, fog, heavy spray, greatly varying ambient light or strong shadows on the road.
- There is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- Insufficient road illumination.

- The windshield is dirty, fogged up, damaged or covered in the vicinity of the camera, e.g. by a sticker.
- No, or several, unclear lane markings are present for one lane, or the markings change quickly, for example, in a construction area or intersections.
- The lane markings are worn away, dark or covered up, e.g. by dirt or snow.
- If the distance to the vehicle in front is too short and thus the lane markings cannot be detected.
- The road is narrow and winding.
- There are obstacles on the lane or projecting out into the lane, such as object markers.

The system does not provide assistance in the following conditions:

- On tight curves and when turning.
- · When crossing intersections.
- At roundabouts or toll stations.
- When the tire pressure is too low.

 WARNING Risk of accident if Active Steering Assist unexpectedly stops functioning

If the system limits of Active Steering Assist are reached there is no guarantee that the system will remain active or will keep the vehicle in lane.

- Always keep your hands on the steering wheel and observe the traffic carefully.
- Always steer the vehicle paying attention to traffic conditions.
- WARNING Risk of accident if Active Steering Assist unexpectedly intervenes

The detection of lane markings and objects may malfunction and cause unexpected steering interventions.

Steer according to traffic conditions.

Activating/deactivating Active Steering Assist

Requirements:

• ESP[®] is activated, but is not intervening.

 Active Distance Assist DISTRONIC is activated.

Multimedia system:

 \rightarrow \bigcirc Settings \rightarrow Quick Access

Select Steering Assist.

Function of Active Emergency Stop Assist

If the system detects that the driver has not steered the vehicle for a considerable period of time or has removed their hands from the steering wheel, display () appears in the Instrument Display. If the driver still does not steer the vehicle, or gives no confirmation to the system, a warning tone sounds in addition to the visual warning mes-

If the driver still does not respond to the warning, the **Beginning Emergency Stop** message appears in the Instrument Display. If the driver still does not respond, Active Distance Assist DISTRONIC reduces the speed. The vehicle is decelerated in stages to a standstill.

Depending on the country, at speeds below 40 mph (60 km/h) the hazard warning lights switch on automatically.

When the vehicle is stationary, the following actions are carried out:

- The vehicle is secured with the electric parking brake.
- Active Distance Assist DISTRONIC is ended.
- The vehicle is unlocked.
- If possible, an emergency call is placed to the Mercedes-Benz emergency call center.

The driver can cancel the deceleration at any time by performing one of the following actions:

• Steering

- Braking or accelerating
- Deactivating Active Distance Assist DISTRONIC

Active Lane Change Assist

Function of Active Lane Change Assist

Active Lane Change Assist supports the driver when changing lanes by applying steering torque if the driver activates a turn signal indicator.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (\rightarrow page 180).

Assistance when changing lanes is provided if all the following conditions are met:

- You are driving on a freeway or road with multiple lanes in the direction of travel.
- The neighboring lane is separated by a broken lane marking.
- No vehicle is detected in the adjacent lane.
- The vehicle speed is between 50 mph (80 km/h) and 110 mph (180 km/h).

- Active Lane Change Assist is switched on in the multimedia system.
- Active Steering Assist is activated and active.

If no vehicle is detected in the adjacent lane and a lane change is permitted, the lane change begins after the driver has activated the turn signal indicator. This is shown to the driver with a green arrow next to the steering wheel symbol. The Lane Change to the Left message, for example, also appears. If Active Lane Change Assist has been activated with the turn signal indicator but a lane change is not immediately possible, a gray arrow appears next to the steering wheel symbol, which remains green.

When lane change assistance starts, the turn signal indicator is automatically activated along with the display in the Instrument Display.

If the assistance graphic is shown when changing lanes, an additional arrow appears in it pointing towards the adjacent lane (\rightarrow page 189).

If a lane change is not possible, the arrow is faded out after a few seconds and a new lane change must be initiated. An immediate lane change is only possible on freeway sections without speed limits.

If the system is impaired, Active Lane Change Assist may be canceled. If it is canceled, the Lane Change Canceled message appears in the Instrument Display.

In addition, a warning tone may sound, depending on the situation.

 WARNING Risk of accident when changing lane to an occupied adjacent lane

Lane Change Assist cannot always clearly detect if the adjacent lane is free.

The lane change might be initiated although the adjacent lane is not free.

- Before changing lanes, make sure that the neighboring lane is free and there is no danger to other road users.
- Monitor the lane change.

 WARNING Risk of accident if Lane Change Assist unexpectedly stops functioning

If the system limitations for Lane Change Assist have been reached, there is no guarantee that the system will remain active.

Lane Change Assist cannot then assist you by applying steering torque.

Always monitor the lane change and keep your hands on the steering wheel. Observe the traffic conditions and steer and/or brake if necessary.

System limits

The system limitations of Active Steering Assist apply to Active Lane Change Assist (\rightarrow page 196).

The system may also be impaired or may not function in the following situations:

- The sensors in the rear bumper are dirty, damaged or covered by a sticker or ice and snow, for example.
- The exterior lighting shows a malfunction.

The Active Lane Change Assist sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered. Active Lane Change Assist is unavailable or only partially available during this teach-in process; no arrow appears next to the Active Steering Assist symbol when the turn signal indicator is activated.

Selecting Active Lane Change Assist Multimedia system:

Select the function.

Active Brake Assist

Function of Active Brake Assist

Active Brake Assist consists of the following functions:

- Distance warning function
- Autonomous braking function
- Situation-dependent braking assistance

• Vehicles with Driving Assistance Package: Evasive Steering Assist and cornering function

Active Brake Assist can help you to minimize the risk of a collision with vehicles, cyclists or pedestrians or to reduce the effects of such a collision.

If Active Brake Assist has detected a risk of collision, a warning tone sounds and the A distance warning lamp lights up in the instrument cluster.

Vehicles with PRE-SAFE[®]: depending on the country, an additional haptic warning occurs in the form of slight, repeated tensioning of the seat belt.

If you do not react to the warning, autonomous braking can be initiated in critical situations.

In especially critical situations, Active Brake Assist can initiate autonomous braking directly. In this case, the warning lamp and warning tone occur simultaneously with the braking application.

If you apply the brake yourself in a critical situation or apply the brake during autonomous braking, situation-dependent braking assistance occurs. The brake pressure increases up to maximum full-stop braking if necessary.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (\rightarrow page 180).

If autonomous braking or situation-dependent braking assistance has occurred, display () appears in the Instrument Display and then automatically goes out after a short time.

If the autonomous braking function or the situation-dependent braking assistance is triggered, additional preventive measures for occupant protection (PRE-SAFE[®]) may also be initiated.

WARNING Risk of an accident caused by limited detection performance of Active Brake Assist

Active Brake Assist cannot always clearly identify objects and complex traffic situations.

In such cases, Active Brake Assist might:

- Give a warning or brake without reason
- Not give a warning or not brake

Active Brake Assist is only an aid. The driver is responsible for maintaining a sufficiently safe distance to the vehicle in front, vehicle speed and for braking in good time.

- Always pay careful attention to the traffic situation; do not rely on Active Brake Assist alone.
- Be prepared to brake or swerve if necessary.

Also observe the system limits of Active Brake Assist.

The individual subfunctions are available in various speed ranges:

The distance warning function can issue a warning in the following situations:

 From approximately 4 mph (7 km/h), if your vehicle is critically close to a vehicle, cyclist or pedestrian, you will hear an intermittent warning tone and the A distance warning lamp lights up in the instrument cluster.

Vehicles with PRE-SAFE[®]: depending on the country, an additional haptic warning occurs in the form of slight, repeated tensioning of the seat belt.

Brake immediately or take evasive action, provided it is safe to do so and the traffic situation allows this.

Distance warning function (vehicles without Driving Assistance Package)

The distance warning function can aid you in the following situations with an intermittent warning tone and a warning lamp:

 at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead

- at speeds up to approximately 50 mph (80 km/h) when approaching stationary vehicles, moving pedestrians, and cyclists ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching crossing cyclists

Distance warning function (vehicles with Driving Assistance Package)

The distance warning function can aid you in the following situations with an intermittent warning tone and a warning lamp:

- at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- at speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- at speeds up to approximately 50 mph (80 km/h) when approaching moving pedestrians and cyclists ahead
- at speeds up to approximately 43 mph (70 km/h) when approaching stationary pedestrians, crossing vehicles and stationary and crossing cyclists

Autonomous braking function (vehicles without Driving Assistance Package)

If the vehicle is traveling at speeds above approximately 4 mph (7 km/h), the autonomous braking function may intervene in the following situations:

- at speeds up to approximately 124 mph (200 km/h) when approaching vehicles ahead
- at speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching moving pedestrians and crossing cyclists
- at speeds up to approximately 31 mph (50 km/h) when approaching stationary vehicles

Autonomous braking function (vehicles with Driving Assistance Package)

If the vehicle is traveling at speeds above approximately 4 mph (7 km/h), the autonomous braking function may intervene in the following situations:

 at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead

- at speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- at speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- at speeds up to approximately 43 mph (70 km/h) when approaching stationary and moving pedestrians, crossing vehicles and stationary and crossing cyclists

Situation-dependent braking assistance (vehicles without Driving Assistance Package)

The situation-dependent braking assistance can intervene from a speed of approximately 4 mph (7 km/h) in the following situations:

- at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- at speeds up to approximately 50 mph (80 km/h) when approaching stationary vehicles and vehicles ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching moving pedestrians and crossing cyclists

Situation-dependent braking assistance (vehicles with Driving Assistance Package)

The situation-dependent braking assistance can intervene from a speed of approximately 4 mph (7 km/h) in the following situations:

- at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- at speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- at speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching stationary and moving pedestrians, crossing vehicles, and stationary and crossing cyclists

Canceling a brake application of Active Brake Assist

You can cancel a brake application of Active Brake Assist at any time by:

- sharply depressing the accelerator pedal or with kickdown
- releasing the brake pedal

Active Brake Assist may cancel the brake application when one of the following conditions is fulfilled:

- You maneuver to avoid the obstacle
- There is no longer a risk of collision
- An obstacle is no longer detected in front of your vehicle

Evasive Steering Assist (only vehicles with Driving Assistance Package)

Evasive Steering Assist has the following characteristics:

- The ability to detect stationary or moving pedestrians.
- Assistance through power-assisted steering if it detects a swerving maneuver.
- Activation by an abrupt steering movement during a swerving maneuver.
- Assistance during swerving and straightening of the vehicle.
- Reaction from a speed of approximately 12 mph (20 km/h) up to a speed of approximately 43 mph (70 km/h).

You can prevent the assistance at any time by actively steering.

Cornering function (only vehicles with Driving Assistance Package)

If the system detects a risk of a collision with an oncoming vehicle when turning across an oncoming lane, autonomous braking can be initiated at speeds below 9 mph (15 km/h) before you have left the lane in which you are driving.

WARNING Risk of accident despite Evasive Steering Assist

Evasive Steering Assist cannot always recognize objects or complex traffic situations clearly.

Moreover, the steering support provided by Evasive Steering Assist is not sufficient to avoid a collision.

- Always pay careful attention to the traffic situation; do not rely on Evasive Steering Assist alone.
- Be prepared to brake or swerve if necessary.

- End the support by actively steering in non-critical situations.
- Drive at an appropriate speed if there are pedestrians close to the path of your vehicle.

System limits

Full system performance is not yet available for a few seconds after switching on the vehicle or after driving off.

If Active Brake Assist is impaired or inoperative due to a malfunction, the Display warning lamp appears in the Instrument Display.

The system may be impaired or may not function, particularly in the following situations:

- In snow, rain, fog, heavy spray, if there is glare, in direct sunlight or in greatly varying ambient light.
- If the sensors are dirty, fogged up, damaged or covered.
- If the sensors are impaired due to interference from other radar sources, e.g. strong radar reflections in a parking garage.

- If a loss of tire pressure or a malfunctioning tire has been detected and displayed.
- In complex traffic situations where objects cannot always be clearly identified.
- If pedestrians or vehicles move quickly into the sensor detection range.
- If pedestrians are hidden by other objects.
- If the typical outline of a pedestrian cannot be distinguished from the background.
- If a pedestrian is not detected as such, e.g. due to special clothing or other objects.
- If the driver's seat belt is not fastened.
- On curves with a tight radius.
- (i) The Active Brake Assist sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered. Active Brake Assist is unavailable or only partially available during the teach-in process.

Activating/deactivating Active Brake Assist

Requirements:

• The vehicle is switched on.

Multimedia system:

→ 🕞 >> Settings >> Assistance

- ► Active Brake Assist
- Select the desired setting. The setting is retained when the drive system is next started.

Deactivating Active Brake Assist

- (i) It is recommended that you always leave Active Brake Assist activated.
- Select Off.

The distance warning function, the autonomous braking function and Evasive Steering Assist are deactivated.

When the vehicle is next started, the middle setting is automatically selected.

(i) If Active Brake Assist is deactivated, the series symbol appears in the status bar of the Instrument Display.

Traffic Sign Assist

Function of Traffic Sign Assist

Traffic Sign Assist detects traffic signs with the multifunction camera (\rightarrow page 180). It assists you by displaying detected speed limits and overtaking restrictions in the Instrument Display.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (\rightarrow page 180).

Since Traffic Sign Assist also uses the data stored in the navigation system, it can update the display in the following situations without detecting traffic signs.

The camera also detects traffic signs with a restriction indicated by an additional sign (e.g. when wet). These are only displayed if a restriction applies or if the system cannot clearly determine whether the restriction applies.

Warning when the maximum permissible speed is exceeded

The system can warn you if you unintentionally exceed the maximum permissible speed. To do this, you can specify in the multimedia system by how much the maximum permissible speed can be exceeded before a warning is issued. You can specify whether the warning is to be just a visual warning or an acoustic one as well.

Display in the Instrument Display

Instrument Display in the Widescreen Cockpit

- Maximum permissible speed
- Maximum permissible speed when there is a restriction
- 3 Additional sign with restriction (e.g. when wet)

(i) Vehicles with a standard Instrument Display: A + symbol next to a traffic sign in the Instrument Display indicates that additional traffic signs have been detected. These can also be

displayed in the media display and optionally in the Head-up Display.

If Traffic Sign Assist cannot determine the maximum permissible speed (e.g. due to missing signs), the following display appears in the Instrument Display:

This is displayed continuously if the vehicle is in a country where Traffic Sign Assist is not supported. Traffic Sign Assist is not available in all countries.

(i) Also observe the information on display messages in Traffic Sign Assist (→ page 353).

System limits

The system may be impaired or may not function particularly in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.

- If the windshield in the area of the multifunction camera is dirty, or if the camera is fogged up, damaged or covered.
- If the traffic signs are hard to detect, e.g. due to dirt, snow or insufficient lighting, or because they are covered.
- If the information in the navigation system's digital map is incorrect or out-of-date.
- If signs are ambiguous, e.g. road signs in roadworks or in adjacent lanes.
- If you turn sharply when passing traffic signs outside the camera's field of vision.

Setting Traffic Sign Assist

Requirements:

Only vehicles with Driving Assistance Package:

Active Distance Assist DISTRONIC and ECO Assist must be activated for the automatic adoption of speed limits. Multimedia system:

→ 🕞 > Settings > Assistance Traffic Sign Assist

Activating or deactivating automatic adoption of speed limits (only vehicles with Driving Assistance Package)

Select Limit Adoption.

- Switch the function on or off. The speed limits detected by Traffic Sign Assist are automatically adopted by Active Distance Assist DISTRONIC.
- (i) If one of the following systems is activated, the detected speed can be manually adopted as the speed limit:
 - Active Distance Assist DISTRONIC
 - Cruise control
 - Variable limiter

Further information about Active Distance Assist DISTRONIC: (\rightarrow page 192).

Displaying detected traffic signs in the media display

- Select Display in Central Display.
- Switch the function on or off.

Setting the type of warning

Select Visual & Audible, Visual or Off.

Setting the warning threshold

This value determines the speed at which a warning is issued when exceeded.

- Select Warning Threshold.
- Set the desired speed.

Traffic Light Information service

WARNING Risk of an accident or injury due to distraction, incorrect or missing data

The traffic light information display is an aid and cannot replace the observation of the actual driving situation.

- Keep the actual traffic situation constantly in view when approaching a traffic light and when changing lanes.
- Avoid looking at the Instrument Display and Head-up Display for a long time.

The Instrument Display and Head-up Display (if available) show the traffic light icon and remaining time 1 until the next green phase as a countdown.

Example representation in the Instrument Display

The display is hidden about five seconds before the traffic lights change to green.

- (i) The display also goes out in the following cases:
 - When turning off before the intersection into a cross or side street
 - When turning before the intersection
- (i) The direction arrows are displayed depending on the following functions:
 - A turn signal is set
 - A lane is recommended during active route guidance

If neither function is active, the remaining time until the next green phase for the lane straight ahead is displayed.

(i) Use of the traffic light information service requires the regular transmission of vehicle positions and driving directions to Mercedes-Benz. The data is immediately anonymized by Mercedes-Benz and forwarded to the provider of the traffic light information service. The vehicle positions and driving directions are deleted after a very short time (a few seconds) and are not permanently saved. If you do not want to transmit the vehicle positions and driving directions, you have the following options:

- You deactivate the service in the Mercedes me portal.
- You have the service deactivated at an authorized Mercedes-Benz Center.
- You deactivate the service in the Assistance menu in the multimedia system (→ page 208).
- (i) This traffic light information service is only available in certain cities and regions.

The function is supported under the following conditions:

- The vehicle is equipped with a multimedia system featuring navigation and a communication module with an activated, integrated SIM card.
- You have a user account for the Mercedes me Portal.
- The vehicle has been connected with the user account.

- The navigation services option is available, subscribed to and activated in the Mercedes me Portal.
- The traffic light data service belongs to the scope of the navigation services.

The current vehicle position and the direction of travel are transmitted via the communication module and aligned with the data from the traffic light data service provider. The provider gathers data from traffic lights which transmit their changing phases. When the vehicle approaches an intersection with networked traffic lights, data is transmitted to the vehicle.

A set turn signal left or right and lane recommendations during active route guidance are taken into account for the display.

The service is for information purposes only and is not linked to any other vehicle functions, systems or components. Please note that the displayed data is not available in all traffic areas and may be incorrect.

Certain light signal systems automatically adapt their switching times to the current traffic situation. This can lead to a sudden change in the countdown display.

The information in the Instrument Display is shown after selecting the display contents in the Assistance menu. If another menu is selected, the traffic light countdown is not displayed.

Also observe the following information:

- select a speed adapted to the traffic, surroundings and weather conditions
- · observe actual traffic signs
- observe applicable traffic rules and regulations

Please observe the notes on driving systems and your responsibility. You could otherwise fail to recognize dangers.

System limits

The display does not appear in the following situations, for example:

- There is no traffic light data available.
- The time remaining until the next green phase is less than ten seconds.

- Emergency vehicles or local public transport are located in the vicinity of the intersection.
- The data transmission from the vehicle has been interrupted.
- The traffic light systems are located in a construction site area or are undergoing maintenance.
- The light signal system is malfunctioning.
- The subscription to the service has expired.

Switching the traffic light information display on or off

Multimedia system:

Switch Traffic Light Information on or off .

Blind Spot Assist and Active Blind Spot Assist with exit warning

Function of Blind Spot Assist and Active Blind Spot Assist with exit warning

Blind Spot Assist and Active Blind Spot Assist use two lateral, rear-facing radar sensors to monitor the area up to 130 ft (40 m) behind and 10 ft (3 m) next to your vehicle.

If a vehicle is detected at speeds above approximately 8 mph (12 km/h) and this vehicle subsequently enters the monitoring range directly next to your vehicle, the warning lamp in the outside mirror lights up red.

Permanent status display in the instrument cluster:

- (gray): system is activated but inoperative
- (green): system is activated and operational

If a vehicle is detected close to your vehicle and you switch on the turn signal indicator in the corresponding direction, a double warning tone sounds and the red warning lamp in the outside mirror flashes. If the turn signal indicator remains switched on, all other detected vehicles are indicated only by the flashing of the red warning lamp.

If you overtake a vehicle quickly, no warning is given.

WARNING Risk of accident despite Blind Spot Assist

Blind Spot Assist does not react to vehicles approaching and overtaking you at a greatly different speed.

Blind Spot Assist cannot warn drivers in this situation.

Always pay careful attention to the traffic situation and maintain a safe distance at the side of the vehicle.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (\rightarrow page 180).

Exit warning

The exit warning is an additional function of Blind Spot Assist and can warn vehicle occupants about approaching vehicles when leaving the vehicle when stationary.

WARNING Risk of accident despite exit warning

The exit warning neither reacts to stationary objects nor to persons or road users approaching you at a greatly differing speed.

The exit warning cannot warn drivers in these situations.

Always pay particular attention to the traffic situation when opening the doors and make sure there is sufficient clearance.

If there is a vehicle in the monitoring range, this is indicated in the outside mirror. If a vehicle occupant opens the door on the side with the warning, a warning tone sounds and the warning lamp in the outside mirror starts to flash.

This additional function is only available when Blind Spot Assist is active. When the exit warning is activated, it can warn vehicle occupants for up to three minutes after switching the vehicle off.

The exit warning is no longer available once the warning lamp in the outside mirror flashes three times.

The exit warning is only an aid and not a substitute for the attention of vehicle occupants. The responsibility for opening and closing the doors and for leaving the vehicle remains with the vehicle occupants.

System limits

Blind Spot Assist and Active Blind Spot Assist may be limited in the following situations, in particular:

- if there is dirt on the sensors or the sensors are obscured
- in poor visibility, e.g. due to fog, heavy rain or snow
- if there are narrow vehicles, e.g. bicycles or motorbikes
- if the road has very wide or narrow lanes
- if vehicles are not driving in the middle of their lane

Warnings may be issued in error when driving close to crash barriers or similar continuous lane

borders. Always make sure that there is sufficient distance to the side for other traffic or obstacles.

Warnings may be interrupted when driving alongside long vehicles, for example trucks, for a prolonged time.

Blind Spot Assist is not operational when reverse gear is engaged.

The exit warning may be limited in the following situations:

- when the sensors are covered by adjacent vehicles in narrow parking spaces
- when people approach the vehicle
- in the event of stationary or slowly moving objects

Function of brake application (Active Blind Spot Assist)

If Active Blind Spot Assist detects a risk of a side impact in the monitoring range, a course-correcting brake application is carried out. This is designed to help you avoid a collision.

The course-correcting brake application is available in the speed range between approximately 20 mph (30 km/h) and 125 mph (200 km/h).

WARNING Risk of accident despite brake application of Active Blind Spot Assist

A course-correcting brake application cannot always prevent a collision.

- Always steer, brake or accelerate yourself, especially if Active Blind Spot Assist warns you or makes a course-correcting brake application.
- Always maintain a safe distance at the sides.

If a course-correcting brake application occurs, the red warning lamp flashes in the outside mirror and a warning tone sounds. In addition, display

() indicating the danger of a side collision appears in the Instrument Display.

In rare cases, the system may make an inappropriate brake application. This brake application may be interrupted at any time if you steer slightly in the opposite direction or accelerate.

System limits

Note the system limitations of Active Blind Spot Assist; you may otherwise not recognize the dangers (\rightarrow page 209).

Either a course-correcting brake application appropriate to the driving situation, or none at all, may occur in the following situations:

- Vehicles or obstacles, e.g. crash barriers, are located on both sides of your vehicle.
- A vehicle approaches too closely on the side.
- You have adopted a sporty driving style with high cornering speeds.
- You brake or accelerate significantly.
- A driving safety system intervenes, e.g. ESP[®] or Active Brake Assist.
- ESP[®] is deactivated.

• A loss of tire pressure or a malfunctioning tire is detected.

Activating/deactivating Blind Spot Assist or Active Blind Spot Assist

Multimedia system:

- ► 🔂 ► Settings ► Assistance
- Activate or deactivate Blind Spot Assist.
- or
- Activate or deactivate Act. Blind Spot Assist.

Active Lane Keeping Assist

Function of Active Lane Keeping Assist

Active Lane Keeping Assist monitors the area in front of your vehicle by means of the multifunction camera (\rightarrow page 180). It serves to protect you against unintentionally leaving your lane. You will be warned by vibration pulses in the steering wheel and guided by a course-correcting brake application back into your lane.

Active Lane Keeping Assist is available in the speed range between 37 mph (60 km/h) and 124 mph (200 km/h).

Active Lane Keeping Assist can neither reduce the risk of an accident if you fail to adapt your driving style nor override the laws of physics. It cannot take into account road, weather or traffic conditions. Active Lane Keeping Assist is only an aid. You are responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane.

The status of Active Lane Keeping Assist is displayed in the on-board computer:

- (green): Active Lane Keeping Assist is active and operating.
- (gray): Active Lane Keeping Assist is active but not operating.
- ZEN: Active Lane Keeping Assist is deactivated or there is a malfunction.

If a lane-correcting brake application occurs, display ① appears in the Instrument Display.

The system does not apply the brake if you activate the turn signal indicator.

Vehicles with Driving Assistance Package: if the system detects an obstacle, such as another vehicle in the adjacent lane, it will apply the brake regardless of the turn signal indicator.

You are warned by vibrations in the steering wheel in the following circumstances:

- Active Lane Keeping Assist detects a lane marking.
- A front wheel drives over this lane marking.

Conditions for a course-correcting brake application (vehicles without Driving Assistance Package)

Lane markings were detected on both sides of the lane. The front wheel drives over a continuous lane marking.

(i) A brake application may be interrupted at any time if you steer slightly in the opposite direction.

Conditions for a course-correcting brake application (vehicles with Driving Assistance Package)

- A continuous lane marking was detected and driven over with the front wheel.
- A lane marking and an approaching vehicle, an overtaking vehicle or vehicles driving parallel to your vehicle were detected in the adjacent lane. The front wheel drives over the lane marking.
- (i) A brake application may be interrupted at any time if you steer slightly in the opposite direction.

System limits

No lane-correcting brake application occurs in the following situations:

- You clearly and actively steer, brake or accelerate.
- If a driving safety system intervenes, such as ESP[®], Active Brake Assist or Active Blind Spot Assist.
- You have adopted a sporty driving style with high cornering speeds or high rates of acceleration.
- When ESP[®] is deactivated.
- If a loss of tire pressure or a faulty tire is detected and displayed.

If you deactivate the Active Lane Keeping Assist warning and the lane markings cannot be clearly detected, it is possible that no lane-correcting brake application takes place (\rightarrow page 213).

The system may be impaired or may not function particularly in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, the sun or reflections.
- If the windshield in the area of the multifunction camera is dirty, or if the camera is fogged up, damaged or covered.
- If there are no lane markings, or several unclear lane markings are present for one lane, e.g. around roadworks.
- If the lane markings are worn, dark or covered.
- If the distance to the vehicle in front is too short and thus the lane markings cannot be detected.
- If the lane markings change quickly, e.g. lanes branch off, cross one another or merge.
- If the road is very narrow and winding.
- Vehicles with Driving Assistance Package: if the radar sensors in the rear bumper are dirty

or covered in snow and an obstacle is detected in your lane, no lane-correcting brake application takes place.

Activating/deactivating Active Lane Keeping Assist

Multimedia system:

Activate or deactivate the function.

Setting Active Lane Keeping Assist Multimedia system:

→ 🕞 ≫ Settings ≫ Assistance Active Lane Keeping Assist

Activating or deactivating the haptic warning

 Select Warning. Activate or deactivate the function.

Function of adaptive damping adjustment

Suspension with adaptive damping adjustment continuously adjusts the characteristics of the

suspension dampers to the current operating and driving conditions.

The damping is set individually for each wheel and is affected by the following factors:

- The road surface conditions
- Vehicle load
- The drive program selected
- The driving style

The drive program can be adjusted using the DYNAMIC SELECT switch.

Rear view camera

Function of the rear view camera

When you engage reverse gear, the image from the rear view camera is shown in the media display. Dynamic guide lines show the path the vehicle will take with the current steering angle. This helps you to orient yourself and to avoid obstacles when backing up.

The rear view camera is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and park-

ing remains with you. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking.

(i) You can open the cover of the rear view camera manually (→ page 218).

The guide lines in the media display show the distances to your vehicle. The distances displayed only apply to road level.

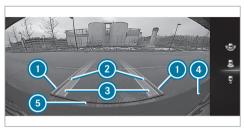

Depending on the vehicle equipment, you can select from the following views:

- Normal view
- Wide-angle view

The area behind the vehicle is displayed as a mirror image, as in the inside rearview mirror.

Vehicles without Parking Assist PARKTRONIC

The following camera views are available in the multimedia system:

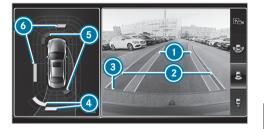

Normal view

- Yellow guide line, vehicle width (driven surface) depending on the current steering angle (dynamic)
- Yellow guide line at a distance of approximately 3.3 ft (1.0 m) from the rear area
- Yellow lanes marking the course the tires will take with the current steering angle (dynamic)
- O Bumper
- Red guide line at a distance of approximately 1.0 in (0.3 m) from the rear area

Wide-angle view

Vehicles with Parking Assist PARKTRONIC

The following camera views are available in the multimedia system:

Red warning display of Parking Assist PARKTRONIC: obstacles are very close (approximately 1.0 ft (0.3 m) or less)

Orange warning display of Parking Assist PARKTRONIC: obstacles are a medium distance away (between approximately 1.0 ft (0.3 m) and 2.0 ft (0.6 m))

- Yellow lanes marking the course the tires will take with the current steering angle (dynamic)
- Yellow guide line, vehicle width (driven surface) depending on the current steering angle (dynamic)
- Red guide line at a distance of approximately 1.0 in (0.3 m) from the rear area
- Yellow warning indicator of Parking Assist PARKTRONIC: obstacles at a distance between approximately 2.0 ft (0.6 m) and 3.3 ft (1.0 m)

Wide-angle view

System failure

If the rear view camera is not operational, the following display appears in the multimedia system.

System limits

The rear view camera will not function or will only partially function in the following situations:

- The tailgate is open.
- There is heavy rain, snow or fog.
- The ambient light conditions are poor, e.g. at night.
- Cameras, or vehicle components in which the cameras are installed, are damaged, dirty or covered. Observe the information on vehicle sensors and cameras (→ page 180).
- (i) Do not use the rear view camera in these types of situations. You could otherwise injure others or collide with objects when parking the vehicle.
- (i) The contrast of the display may be impaired by direct sunlight or by other light sources, e.g. when driving out of a garage. In this case, pay particular attention.

(i) Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.

360° camera

Function of the surround view camera

The surround view camera is a system that consists of four cameras. The cameras cover the immediate vehicle surroundings. The system assists you when you are parking or at exits with reduced visibility, for example.

The views of the surround view camera are always available when driving forwards up to a speed of approx. 10 mph (16 km/h) and when backing up.

The surround view camera is only an aid and may show a distorted view of obstacles, show them incorrectly or not show them at all. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking. The system evaluates images from the following cameras:

- Rear view camera
- Front camera
- Two side cameras in the outside mirrors
- You can open the cover of the rear view camera manually (→ page 218).

Views of the surround view camera

You can select from different views:

- Wide-angle view, front
- Iop view with image from the front camera

- Top view with images from the side cameras in the outside mirrors
- Wide-angle view, rear
- Top view with image from the rear view camera
- Top view with trailer view (vehicles with a trailer hitch)

Top view

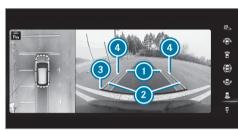

- Lane indicating the route the vehicle will take at the current steering wheel angle
- Warning display of Parking Assist PARKTRONIC
- Your vehicle from above

The color of the individual segments of warning display (2) is based on the distance to the detected obstacle:

- Yellow segments: obstacles at a distance between approx. 2.0 ft (0.6 m) and 3.3 ft (1.0 m)
- Orange segments: obstacles at a distance between approx. 1.0 ft (0.3 m) and 2.0 ft (0.6 m)
- Red segments: obstacles at a very short distance of approx. 1.0 ft (0.3 m) or less

When Parking Assist PARKTRONIC is operational and no object is detected, the segments of the warning display are shown in gray.

Guide lines

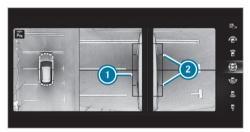

- Yellow lane marking the course the tires will take at the current steering wheel angle (dynamic)
- Yellow guide line, vehicle width (driven surface) depending on the current steering wheel angle (dynamic)
- Red guide line at a distance of approximately 1.0 in (0.3 m) from the rear area
- Mark at a distance of approx. 3.3 ft (1.0 m)
- (i) When Active Parking Assist is active, lanes ① are displayed in green.

The guide lines in the media display show the distances to your vehicle. The distances apply to road level.

Side view of the mirror cameras

The sides of the vehicle can be seen in this view.

- Guide line of external vehicle dimensions with outside mirrors folded out
- 2 Marker of the wheel contact points

System failure

If the system is not ready for operation, the following message appears in the media display:

System limits

The surround view camera will not function or will only partially function in the following situations:

- The doors are open.
- The outside mirrors are folded in.
- The tailgate is open.
- There is heavy rain, snow or fog.
- The ambient light conditions are poor, e.g. at night.
- Cameras, or vehicle components in which the cameras are installed, are damaged, dirty or covered. Observe the information on vehicle sensors and cameras (→ page 180).
- Do not use the surround view camera under such circumstances. You could otherwise injure others or collide with objects when parking the vehicle.

For technical reasons, the standard height of the vehicle may be altered if the vehicle is carrying a heavy load and can result in inaccuracies in the guide lines and in the display of the generated images.

- (i) The contrast of the display may be impaired by abrupt, direct sunlight or by other light sources, e.g. when driving out of a garage. In this case, pay particular attention.
- (i) Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.

See the notes on cleaning the surround view camera (\rightarrow page 289).

Calling up the view of the surround view camera using reverse gear

- Engage reverse gear.
- Select the desired view in the multimedia system (→ page 216).
- If, after shifting to reverse gear, the image of the rear view camera is not shown: switch off the vehicle, press and hold the P. button,

switch on the vehicle and engage reverse gear again.

Opening the camera cover of the rear view camera

Multimedia system:

- → Settings → Assistance
 Camera & Parking
- Select Open Camera Cover.
- (i) The camera cover closes automatically after some time or after an ignition cycle.

Parking Assist PARKTRONIC

Function of Parking Assist PARKTRONIC

Parking Assist PARKTRONIC is an electronic parking assistance system with ultrasound. It monitors the area around your vehicle using multiple sensors on the front bumper and on the rear bumper. Parking Assist PARKTRONIC shows you the distance between your vehicle and a detected obstacle visually and audibly.

Parking Assist PARKTRONIC is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and

parking remains with you. Make sure that there are no persons, animals or objects in the maneuvering area while maneuvering and parking in/ exiting parking spaces.

In the standard setting, an intermittent warning tone sounds from a distance of approximately 1.0 ft (0.3 m) to an obstacle in front and approximately 3.3 ft (1.0 m) to an obstacle behind. A continuous warning tone sounds from a distance of approximately 0.7 ft (0.2 m). Using the Warn Early All Around setting in the multimedia system, the warning tones for front and side impact protection can be set to sound at a greater distance of approximately 3.3 ft (1.0 m) in front and 2.0 ft (0.6 m) on the sides (\rightarrow page 223).

(i) The Warn Early All Around setting is always active at the rear of the vehicle.

Parking Assist PARKTRONIC display in the multimedia system

Vehicles without surround view camera

Vehicles with surround view camera

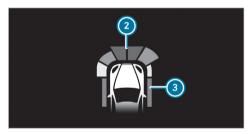

If you have not selected the Camera & Parking menu and an obstacle is detected in the path of the vehicle, a pop-up window for Parking Assist PARKTRONIC () appears in the multimedia system at speeds below 6 mph (10 km/h).

The color of the individual segments of the warning display is based on the distance to the detected obstacle:

 Yellow segments: obstacles at a distance between approx. 2.0 ft (0.6 m) and 3.3 ft (1.0 m)

- Orange segments: obstacles at a distance between approx. 1.0 ft (0.3 m) and 2.0 ft (0.6 m)
- Red segments: obstacles at a very short distance of approx. 1.0 ft (0.3 m) or less

Display of Parking Assist PARKTRONIC in the Head-up Display

Optionally, obstacles detected by Parking Assist PARKTRONIC from a distance of approximately 3.3 ft (1.0 m) in front ② and 2.0 ft (0.6 m) on the sides ③ can also be displayed in the Head-up Display.

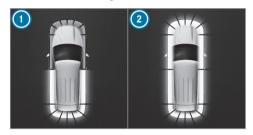

System limits

Parking Assist PARKTRONIC does not necessarily take into account the following obstacles:

- Obstacles below the detection range, e.g. persons, animals or objects.
- Obstacles above the detection range, e.g. overhanging loads, overhangs or loading ramps of trucks.

The sensors must be free of dirt, ice and slush. Otherwise, they may not function correctly. Clean the sensors regularly, taking care not to scratch or damage them (\rightarrow page 180).

Problems with Parking Assist PARKTRONIC

Example: vehicles with surround view camera

When rear segments () or all-round segments (2) light up red and the PFF symbol appears in the Instrument Display, Parking Assist PARKTRONIC may have been deactivated due to signal interference. Start the vehicle again and check if Parking Assist PARKTRONIC is working at a different location.

If a warning tone also sounds for approximately two seconds every time the vehicle is started, it may be due to one of the following causes:

- The sensors are dirty: clean the sensors and observe the notes on care of vehicle parts (→ page 289).
- Parking Assist PARKTRONIC has been deactivated due to a malfunction: restart the vehicle. If the problem persists, consult a qualified specialist workshop.

Function of the passive side impact protection

Passive side impact protection is an additional Parking Assist PARKTRONIC function which warns the driver about obstacles at the side of the vehicle. A warning is issued when obstacles are detected between the front and rear detection range. In order for an object on the side to be detected, the sensors in the front and rear bumper must first detect the object while you are driving past it.

During the parking procedure or maneuvering, objects are detected as the vehicle drives past. If you steer in the direction of a detected obstacle and there is a risk of a lateral collision, a warning is issued and the segments light up in color on the display.

The segment color changes depending on the distance to the detected obstacle:

- Yellow: approximately 1.0 2.0 ft (30 60 cm)
- Red: less than approximately 1.0 ft (30 cm)

In order for lateral, front or rear segments to be displayed, the vehicle must first travel a distance of at least half a vehicle's length. Once the vehicle has travelled the length of the vehicle, all of the lateral front and rear segments can be displayed.

Parking Assist PARKTRONIC display: vehicles without a surround view camera

- Operational front and rear
- Operational front, rear and sides
- Obstacle detected at the front right (yellow) and rear (red)

Parking Assist PARKTRONIC display: vehicles with a surround view camera

- Operational front and rear
- Operational front, rear and sides
- Obstacles detected at the front right (red)

Saved obstacles on the sides are deleted in the following situations, for example:

- You park the vehicle and switch it off.
- You open the doors.

After the engine is restarted, obstacles on the sides must be detected again before a new warning can be issued.

System limits

The system limits for Parking Assist PARKTRONIC apply to passive side impact protection.

The following objects are not detected, for example:

- Pedestrians who approach the vehicle from the side
- Objects placed next to the vehicle

Activating/deactivating Parking Assist PARKTRONIC using the multimedia system

I NOTE Risk of an accident from objects at close range

Parking Assist PARKTRONIC may not detect certain objects at close range.

When parking or maneuvering the vehicle, pay particular attention to any objects which are above or below the sensors, e.g. flower pots or drawbars. The vehicle or other objects could otherwise be damaged.

Requirements:

- The camera menu is open.
- Or: Active Parking Assist is active.
- Or: the PARKTRONIC pop-up window appears.
- Tap **P**^w on the media display.

If the indicator lamp in the $\boxed{P_{WI}^{WI}}$ button is not lit, Parking Assist PARKTRONIC is active. If the indicator lamp is lit or the $\boxed{P_{WI}^{WI}}$ symbol appears in the instrument cluster, Parking Assist PARKTRONIC is not active.

(i) Parking Assist PARKTRONIC is automatically activated when the vehicle is started.

Alternatively, Parking Assist PARKTRONIC can be activated or deactivated in the quick access menu.

Setting the warning tones of Parking Assist PARKTRONIC

Multimedia system:

 \rightarrow \bigcirc Settings \rightarrow Assistance

➤ Camera & Parking

Adjusting the volume of the warning tones

- Select Warning Tone Volume.
- Set a value.

Adjusting the pitch of the warning tones

- Select Warning Tone Pitch.
- Set a value.

Specifying the starting point for the warning tones

You can specify whether the Parking Assist PARKTRONIC warning tones should commence when the vehicle is further away from an obstacle.

- Select Warn Early All Around.
- Switch the function on or off.

Activating/deactivating audio fadeout

You can specify whether the volume of a media source in the multimedia system is to be reduced

when Parking Assist PARKTRONIC sounds a warning tone.

Select Audio Fadeout During Warning Tones.

Switch the function on or off.

Active Parking Assist

Function of Active Parking Assist

Active Parking Assist is an electronic parking assistance system, which uses ultrasound with the assistance of the rear view camera and surround view camera. When you are driving forwards up to approximately 22 mph (35 km/h), the system automatically measures parking spaces on both sides of the vehicle.

Active Parking Assist offers the following functions:

- Parking in parking spaces parallel to the road
- Parking in parking spaces perpendicular to the road (optionally either forwards or reverse)
- Exiting parking spaces if you have parked using Active Parking Assist

As soon as all requirements are met for searching for parking spaces, the P display appears in the Instrument Display.

When Active Parking Assist has detected parking spaces, the Display appears in the Instrument Display. The arrows show on which side of the road detected parking spaces are located. They are then shown on the media display.

The parking space can be selected as desired. Depending on the location of the parking space, the parking direction (rearwards or forwards) can also be selected as desired.

When Active Parking Assist is activated, the turn signal indicators are activated based on the calculated path of your vehicle.

When you are entering or exiting a parking space, the procedure is assisted by acceleration, braking, steering and gear changes.

Active Parking Assist is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that no persons, animals or objects etc. are in the maneuvering range.

Active Parking Assist will be canceled in the following situations:

- Parking Assist PARKTRONIC is deactivated.
- You begin steering.
- You apply the parking brake.
- You engage transmission position **P**.
- ESP[®] intervenes.
- You open the doors or the tailgate while driving.

System limits

If the exterior lighting is malfunctioning, Active Parking Assist is not available.

Objects located above or below the detection range of the sensors, e.g. overhanging loads, overhangs or loading ramps of trucks, or the borders of parking spaces, are not detected during measurement of the parking space. These are also then not taken into account when calculating the parking procedure. In some circumstances, Active Parking Assist may therefore guide you into the parking space incorrectly. WARNING Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:

- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

There is a danger of collision!

In these situations, do not use Active Parking Assist.

Extreme weather conditions, such as snow or heavy rain, may lead to a parking space being measured inaccurately. Parking spaces that are partially occupied by trailer drawbars might not be identified as such or be measured incorrectly. Only use Active Parking Assist on level, high-grip ground.

Do not use Active Parking Assist in the following situations:

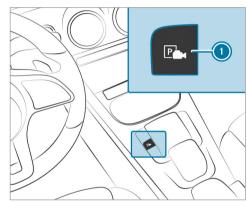

• In extreme weather conditions such as ice, packed snow or in heavy rain.

- When transporting a load that protrudes beyond the vehicle.
- On steep uphill or downhill gradients of more than approximately 15%.
- When snow chains are installed.
- Directly after a tire change or when spare tires are installed.
- If the tire pressure is too low or too high.
- If the suspension is out of alignment, e.g. after bottoming out on a curb.

Active Parking Assist may also display parking spaces that are not suitable for parking, such as:

- Parking spaces where parking is prohibited.
- · Parking spaces on unsuitable surfaces.

Parking with Active Parking Assist

Press button ①.

The media display shows the view of Active Parking Assist. Area (2) displays detected parking spaces (4) and vehicle path (8).

- (i) Vehicle path (3) shown on the media display may differ from the actual vehicle path.
- If a parking space is displayed: stop the vehicle.
- Select desired parking space ④ and confirm.

If necessary, select the parking direction (forwards or reverse), and confirm.
 Vehicle path (3) is shown, depending on selected parking space (4) and the parking direction.

(i) The turn signal indicator is switched on automatically when the parking procedure begins.

You are responsible for selecting the turn signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

▲ WARNING Risk of accident due to vehicle swinging out while parking or pulling out of a parking space

While parking or exiting a parking space, the vehicle swings out and can drive onto areas of the oncoming lane.

This could cause you to collide with objects or other road users.

- Pay attention to objects and other road users.
- Where necessary, stop the vehicle or cancel the parking procedure with Active Parking Assist.
- If, for example, the Please Engage Reverse Gear message appears in the media display:

select the corresponding transmission position.

The vehicle drives into the selected parking space.

(i) During the parking procedure with Active Parking Assist, the lane markings are displayed in green in the camera image.

On completion of the parking procedure, the Parking Assist Finished, Take Control of Vehicle display message appears. Further maneuvering may still be necessary.

- After completion of the parking procedure, safeguard the vehicle against rolling away.
 When required by legal requirements or local conditions: turn the wheels towards the curb.
- (i) You can stop the vehicle and change the transmission position during the parking procedure. The system then calculates a new vehicle path. If no new vehicle path is available, the system can change the transmission position again or cancel the parking procedure.

Exiting a parking space with Active Parking Assist

Requirements:

• The vehicle has been parked with Active Parking Assist.

Please note that you are responsible for the vehicle and surroundings during the entire parking procedure.

Start the vehicle.

Press button **()**. The media display shows the view of Active Parking Assist.

- If the vehicle has been parked perpendicular to the direction of travel: in area ②, select direction of travel ③ Left or Right.
- (i) The vehicle path shown on the media display may differ from the actual vehicle path.
- Confirm direction of exit (3) to drive out of the parking space.
- The turn signal indicator is switched on automatically when the exiting procedure begins.

You are responsible for selecting the turn signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

▲ WARNING Risk of accident due to vehicle swinging out while parking or pulling out of a parking space

While parking or exiting a parking space, the vehicle swings out and can drive onto areas of the oncoming lane.

This could cause you to collide with objects or other road users.

- Pay attention to objects and other road users.
- Where necessary, stop the vehicle or cancel the parking procedure with Active Parking Assist.
- If, for example, the Please Engage Forward Gear message appears in the media display:

select the corresponding transmission position.

The vehicle moves out of the parking space. The turn signal indicator is switched off automatically.

After the parking space has been exited, a warning tone and the Real Parking Assist Finished, Take Control of Vehicle message prompt you to take control of the vehicle.

The vehicle is not automatically braked and can roll away. You have to accelerate, brake, steer and change gear yourself again.

Maneuvering assistance

Function of Drive Away Assist

Drive Away Assist can reduce the severity of an impact when pulling away. If an obstacle is detected in the direction of travel, the vehicle's speed is briefly reduced to approx. 1 mph (2 km/h). If a critical situation is detected, the

Drive Away Assist can be deactivated or activated in the Maneuvering Assistance menu

- $(\rightarrow page 228).$
- (i) You can cancel an intervention by Drive Away Assist at any time by deactivating Parking Assist PARKTRONIC (→ page 222).
- WARNING Risk of accident caused by limited detection performance of Drive Away Assist

Drive Away Assist cannot always clearly identify objects and traffic situations.

- Always pay careful attention to the traffic situation; do not rely on Drive Away Assist alone.
- Be prepared to brake or swerve as necessary, provided the traffic situation permits and that it is safe to take evasive action.

Drive Away Assist is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that no persons, ani-

mals or objects etc. are in the maneuvering range.

A risk of collision may occur in the following situations, for example:

- If the accelerator and brake pedals are interchanged.
- If an incorrect transmission position is engaged.

Drive Away Assist is active under the following conditions:

- If Parking Assist PARKTRONIC is activated.
- If you shift the transmission position to R or
 D when the vehicle is stationary.
- If the detected obstacle is less than approx. 3.3 ft (1.0 m) away.
- If the maneuvering assistance function is activated in the multimedia system.

System limits

The performance of Drive Away Assist is limited on inclines.

(i) Also observe the system limits of Parking Assist PARKTRONIC (\rightarrow page 218).

Function of Cross Traffic Alert

(i) Cross Traffic Alert is only available for vehicles with Blind Spot Assist or Active Blind Spot Assist.

Cross Traffic Alert can warn drivers of any crossing traffic when backing up and maneuvering out of a parking space. The radar sensors in the bumper also monitor the area adjacent to the vehicle. If a critical situation is detected, the A symbol appears in the media display and the vehicle can be braked automatically.

If the radar sensors are obstructed by vehicles or other objects, detection is not possible.

Cross Traffic Alert is active under the following conditions:

- If the vehicle is backing up at a walking pace.
- Maneuvering assistance is activated (→ page 228).
- (i) Also observe the instructions on Blind Spot Assist and Active Blind Spot Assist
 (→ page 209).

System limits

Cross Traffic Alert is not available on inclines.

Activating/deactivating the maneuvering assistant Multimedia system:

- → 🕞 > Settings > Assistance
- ➤ Camera & Parking
- Switch Maneuvering Assistance on or off.
- (i) The maneuvering assistant must be active for the function of Drive Away Assist
 (→ page 227) and Cross Traffic Alert
 (→ page 228).

Vehicle towing instructions

The vehicle is not suitable for the use of tow bar systems that are used for flat towing or dinghy towing, for example. Attaching and using tow bar systems can result in damage to the vehicle. When you are towing a vehicle with tow bar systems, safe driving characteristics cannot be guaranteed for the towing vehicle or the towed vehicle. The vehicle-trailer combination may swerve from side to side.

Observe the following information:

• Permitted towing methods (\rightarrow page 305)

 The notes on towing the vehicle with both axles on the ground (→ page 306)

230 Instrument display and on-board computer

Notes on the instrument display and on-board computer

WARNING Risk of accident if the instrument display fails

If the instrument display has failed or is malfunctioning, function restrictions in systems relevant to safety cannot be detected.

The operating safety of your vehicle may be impaired.

- Drive on carefully.
- Have the vehicle checked immediately at a qualified specialist workshop.
- WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the on-board computer.

The on-board computer shows only display messages and warnings from specific systems on the instrument display. You must therefore ensure that your vehicle is always reliable.

If the operating safety of your vehicle is impaired, park the vehicle immediately and safely. Contact a qualified specialist workshop.

Information about the range

- The actual range achieved may differ from the range displayed. The calculation of the range takes your previous driving style into account.
- When the trip computer is reset, the data on the previous driving style will also be deleted and calculated afresh from this point on.

- Factors such as outside temperature or climate control settings have a direct influence on the achievable range.
- While the navigation system or commuter route is active, additional information about the route ahead can be included in the range calculation.

Electrical consumption

 The consumption figures From Start and From Reset take into account all active consumer equipment when it comes to the drive system's operational readiness [READY].

Overview of instrument display

- Recommended speed when route guidance is active (drive program E Eco)
- Left area for additional values (example: digital speedometer): Digital speedometer/ Range/ECO display
- Outside temperature
- 🕘 Time
- Right area for additional values (example: operating energy in percent): Operating energy in percent/Range/ECO display
- Output scale
- Recuperated power scale
- In Maximum available output of the drive system
- Transmission position
- Ourrent output
- Index points

- Center display area of the instrument display (example: standard display for trip): Trip/ Service/Assistance/Telephone/Media/ Radio/Navigation/Styles and displays
- Current condition of charge of the high-voltage battery
- Available maximum range according to average consumption
- Available range according to personal driving style

Under normal operating conditions, the display of the available drive system output is in the maximum range.

In the following cases, the power output available may deviate from the maximum range:

- Very high or low outside temperatures
- Very high performance requirements for a long period of time
- Very low condition of charge of the high-voltage battery
- Malfunction in the drive system

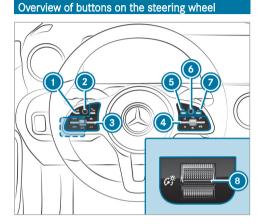

The segments on the speedometer indicate the status of the following systems: cruise control or Active Distance Assist DISTRONIC

Maximum range (1) is calculated based on the average consumption of the vehicle. Range (6) is calculated based on the personal driving style.

The actual remaining range particularly depends on outside temperatures or air conditioning settings.

While the navigation system or commuter route is active, additional information about the route ahead can be included in range calculation (). The actual remaining range may differ from the displayed currently calculated range.

232 Instrument display and on-board computer

- Back/Home button (press and hold), on-board computer
- 2 Touch Control, on-board computer
- Control panel for cruise control or Active Distance Assist DISTRONIC
- Control panel for the MBUX multimedia system (→ page 236)

₩ Voice Control System

- Calls up the home screen of the multimedia system
- o Touch Control multimedia system
- 🕖 🛨 Back button (multimedia system)
- Brightness control to adjust the lighting in the Instrument Display and in the control elements of the vehicle interior

Operating the on-board computer

Observe the legal requirements for the country in which you are currently driving when operating the on-board computer.

When the on-board computer is being operated, different acoustic signals will sound as operating feedback, e.g. when the end of a list is reached or when you are scrolling through a list.

The following menus are available:

- Assistance
- Phone
- Navigation
- Trip
- Radio
- Media
- Designs & Disp.
- Service
- (i) You can find information about the possible settings and selections on the menus in the Digital Operator's Manual.

The menus can be called up from the menu bar on the instrument display.

To call up the menu bar: press the left-hand back button until the menu bar is displayed.

- (i) Vehicles without Active Distance Assist DISTRONIC: press the fractional button to call up the menu bar of the on-board computer.
- **To scroll on the menu bar:** swipe left or right on the left-hand Touch Control.
- To call up a menu, submenu or possible settings on the menu, or confirm a selection or setting: press the left-hand Touch Control.
- To scroll through displays or lists on the menu, or select display content, a function, an entry or a display: swipe upwards or downwards on the left-hand Touch Control.
- **To exit a submenu:** press the left-hand back button.

Selecting the head-up display

To switch on the head-up display: switch on the head-up display via the multimedia system or activate it on the menu bar by swiping upwards on the left-hand Touch Control. The head-up display menu will be selected on the head-up display.

- To switch to the head-up display: press the left-hand Touch Control or swipe upwards on the left-hand Touch Control.
- To set the three display ranges of the head-up display: swipe upwards or downwards on the left-hand Touch Control.

Full-screen menus

Vehicles with an instrument display in the widescreen cockpit: the following menus can be shown full-screen on the instrument display:

- Assistance
- Trip
- Navigation
- On the corresponding menu, use the left-hand Touch Control to scroll to the end of the list.
- Press the left-hand Touch Control. The selected menu will be displayed fullscreen.

Overview of displays on the instrument display

Displays on the instrument display:

- $\bullet Parking Assist (\rightarrow page 225)$
- P Parking Assist PARKTRONIC deactivated
- \odot Cruise control (\rightarrow page 188)
- Active Distance Assist DISTRONIC (→ page 189)
- Active Brake Assist (\rightarrow page 204)
- \bigcirc Active Steering Assist (\rightarrow page 196)
- \nearrow Active Lane Keeping Assist (\rightarrow page 211)
- ▲ Active Lane Change Assist (→ page 199)
- Active Stop-and-Go Assist
- $\begin{array}{c} \hline \text{READY} \\ \hline \text{Operational readiness of the drive system} \\ \hline (\rightarrow \text{page 146}) \end{array}$
- Sound generator inoperative (\rightarrow page 363)
- **HOLD** HOLD function (\rightarrow page 184)
- \blacksquare Adaptive Highbeam Assist (\rightarrow page 127)

Vehicles with Traffic Sign Assist: Detected instructions and traffic signs (\rightarrow page 205).

234 Instrument display and on-board computer

Head-up Display

Function of the Head-up Display

! NOTE Mercedes-AMG vehicles

 Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

The Head-up Display projects the following information into the driver's field of vision above the cockpit, for example:

- The vehicle speed
- Information from the navigation system
- Information from the driving systems and driving safety systems
- Some warning messages

Depending on the vehicle's equipment, different content can be shown in the three areas of the Head-up Display (\rightarrow page 234).

Display content

- Navigation instructions
- Current speed
- 3 Detected instructions and traffic signs
- Set speed in the driving system (e.g. cruise control)

System limits

The visibility of the displays will be affected by the following conditions:

- Seat position
- Image position setting
- Ambient light

- Wet road surface
- · Objects on the display cover
- Polarization in sunglasses
- In extreme sunlight, sections of the display may appear washed out. You can correct this by deactivating and reactivating the Head-up Display.

Setting the Head-up Display using the on-board computer

On-board computer:

→ HEAD-UP DISPLAY

The following Head-up Display settings or displays can be selected or shown:

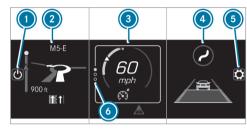

- Position
- Brightness
- Messages
- Assistance status
- Telephone
- Audio
- Voice Control System

- To select the Settings menu: swipe to the right on the left-hand Touch Control. The Settings menu () will be selected.
- **To call up the Settings menu:** press the left-hand Touch Control.
- To adjust the position: swipe upwards or downwards on the left-hand Touch Control.
- To adjust the brightness: swipe to the left or right on the left-hand Touch Control.

Setting messages, assistance status, telephone, audio and the Voice Control System

- Press the left-hand Touch Control. The list of setting options will be displayed.
- Swipe upwards or downwards on the left-hand Touch Control and select a setting by pressing the left-hand Touch Control.

Selecting what the Head-up Display shows

(Example)

- Switches the Head-up Display on/off
- Left display area
 - Navigation system

Average consumption G-meter

Central display area

Speedometer

Set speed in the driver assistance system, e.g. cruise control

Warnings from driver assistance systems, e.g. distance warning

- Right display area Traffic Sign Assist
- Assistant display
- 6 Configuring settings
- Index points

Display areas (2) to (0) that are not required can be hidden.

- (i) In audio mode, the station name or track will be shown temporarily when the audio source is being actively operated. In addition, the latest calls will be displayed when the telephone list on the instrument display is actively operated.
- Swipe upwards or downwards on the left-hand Touch Control.

Switching the Head-up Display on/off via the multimedia system

Multimedia system:

- → 🕞 >> Settings >> Quick Access
- Select HUD.

The Head-up Display is activated.

Overview and operation

Notes on the MBUX multimedia system

 WARNING Risk of distraction from information systems and communications equipment

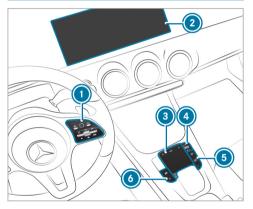

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

Depending on the equipment, the scope of function and product designation of your MBUX multimedia system may differ from the description and images in this Operator's Manual. For example, route guidance with augmented reality is not available in all equipment variants.

Overview of the MBUX multimedia system

- Touch Control and control panel for the MBUX multimedia system
- 2 Media display with touch functionality

- 3 Touchpad
- Ontroller

Turn: adjusts the volume Press briefly: switches the mute function on/off

Press and hold: switches the MBUX multimedia system or media display on or off

- Buttons for navigation, radio/media and telephone
- Button for favorites/themes

Further operating options:

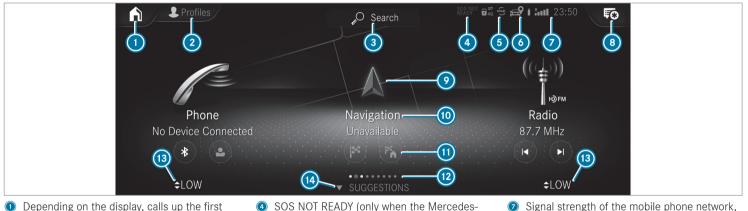

- Conducting a voice dialog with the Voice Control System.
- Operating functions contact-free with the MBUX Interior Assistant.
- (i) You can find further information about operation as well as about applications and services in the Digital Operator's Manual.

Anti-theft protection

This device is equipped with technical provisions to protect it against theft. Further information on

protection against theft can be obtained from an authorized Mercedes-Benz Center.

Home screen overview

- Depending on the display, calls up the first three applications or the home screen
- 2 Calls up the profile
- 3 Calls up the global search

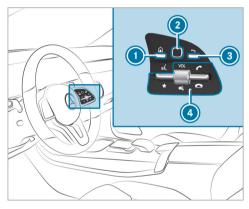

- SOS NOT READY (only when the Mercedes-Benz emergency call system is not available)
- Mercedes me connect active
- Iransmission of vehicle position active
- Signal strength of the mobile phone network, network display, battery status of the mobile phone connected, time
- (a) Calls up the Notifications Center
- Calls up an application using the symbol

- Opplication and current information
- Quick-access, e.g. enter home address
- Index points and selected display area
- Calls up the air conditioning menu
- Calls up SUGGESTIONS, THEMES and FAVORITES
- (i) If Mercedes me connect (s) is active, the vehicle is linked with Mercedes me connect. Vehicle data is then transmitted to the backend system. What data is transmitted depends on which services are activated. Further details can be found in the Mercedes me connect terms and conditions and data protection information. The function is country-dependent.

If transmission of vehicle position () is active , Mercedes me connect services have been activated for this vehicle which access the vehicle's geoposition. In which instances the geoposition is transmitted depends on the particular services. Further details can be found in the Mercedes me connect terms and conditions and data protection information. The function is country-dependent.

Operating the MBUX multimedia system

Using Touch Control

- Calls up the home screen
- 2 Touch Control
- Press briefly: returns to the previous display
- Press the rocker switch down briefly: shows favorites

Press the rocker switch down and hold: adds favorites and themes

VOL Turn controller: adjusts the volume

Press controller: switches off the sound

Press the rocker switch up: makes or accepts a call

Press the rocker switch down: rejects or ends a call

Navigation through the menus is carried out with Touch Control 2 with single-finger swipes.

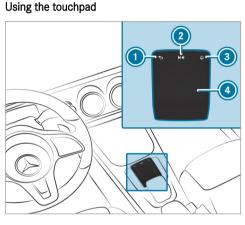

To select a menu option: swipe and press.

To move the digital map: swipe in any direction.

Using the touchscreen

- Select menu options, symbols or characters by pressing briefly.
- To navigate in menus: swipe up, down, left or right.
- To use handwriting to enter characters: write the character with one finger on the touchscreen.

- **To zoom in and out of the map:** move two fingers together or apart.
- To call up the global menu: press and hold on the touchscreen until the OPTIONS menu appears.
- (i) For more information on operation, please refer to the Digital Operator's Manual.

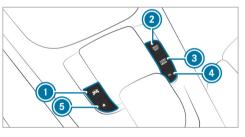

Returns to the previous display

Calls up the audio control menu Swiping to the left of right: selects the previous or next radio station/music track

- Calls up the home screen
- ④ Touchpad

- **To select a menu option:** swipe and press.
- To use handwriting recognition: write a character on the touchpad.
- To open or close the Notifications Center: swipe down or up with two fingers.
- **To zoom in and out of the map:** move two fingers together or apart.

Calling up applications using buttons

- Calls up vehicle functions
- MAP Calls up navigation
- 3 RADIO Calls up radio or media
- TEL Calls up the telephone

- Press briefly: calls up favorites
 Press and hold: adds a favorite or theme
- ▶ Alternatively, tap 🟠 on the touchscreen.
- Call up the application (\rightarrow page 237).

Functions of the Voice Control System

- WARNING Risk of distraction from information systems and communications equipment
- If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.
- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

For your own safety, always observe the following points when operating mobile communications equipment and especially your voice control system:

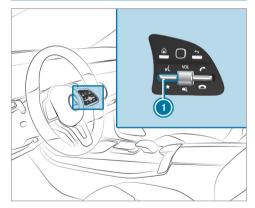

- Observe the legal requirements for the country in which you are driving.
- If you use the voice control system in an emergency your voice can change and your telephone call, e.g. an emergency call, can thereby be unnecessarily delayed.
- Familiarize yourself with the voice control system functions before starting the journey. With the Voice Control System, various applications in the MBUX multimedia system are operable using voice input. The Voice Control System is operational approximately thirty seconds after the ignition is switched on and is available for the driver's seat and front passenger seat.

The following multimedia system applications can be operated:

- Telephone
- Text messages
- Navigation

- Address book
- Radio
- Media
- Vehicle functions

Starting the Voice Control System

Press rocker switch ① up.

or

Say "Hello Mercedes".

Overview of the MBUX Interior Assistant

 WARNING Risk of injury from the camera's laser radiation

This product uses a classification 1 laser system. If the housing is opened or damaged, laser radiation may damage your retina.

- Do not open the housing.
- Always have maintenance work and repairs carried out by a qualified specialist workshop.

This product complies with the requirements of the FDA 21 CFR 1040.10 and 1040.11 with exception of the variations according to the FDA Laser Notice No. 50 from 24. June 2007. The camera is located in the overhead control panel.

If the vehicle is equipped with the MBUX Interior Assistant, selected functions of the multimedia system can be operated contact-free. The MBUX Interior Assistant can differentiate between driver and front passenger interactions and detects specific hand positions (poses).

System limits, display messages and notes for rectification

The system may be impaired or may not function in the following situations:

 The camera in the overhead control panel may heat up due to operating conditions. As a result the camera may switch off temporarily, particularly during longer periods of operation and at high outside temperatures.

Do not touch or cover the camera and wait until the camera has cooled down and is available again. The camera is covered, dirty, fogged up or scratched.

Wait until the camera has cooled down before cleaning the camera lens.

Clean the outside of the camera lens with a dry or damp cotton cloth. Do not use micro-fiber cloths. Do **not** remove the cover when cleaning.

- Recognition can be impaired by reflective clothing, an adverse color of clothing or by accessories, for example.
- Clothing being worn (hat, shawl, scarf) may be limiting the detection area of the camera. Keep the camera's field of vision clear.
- The camera is not operational.

Consult an authorized Mercedes-Benz Center.

Interaction area	Interaction	Description
In front of the media display or above the touchpad	Proximity to the control element	The Interior Assistant recognizes the approach of the hand towards a control element.
		Depending on the active application, the display will be adjusted in the media display. Some functions differentiate between driver and front passenger.
		No specific hand position is required.
Above the center console	Defined pose	A favorite is called up with a defined pose.
Below the inside rearview mirror	Brief up and down movements	With brief vertical up and down movements below the inside rearview mirror the reading light for the driver or the front passenger is switched on and off.
Above the front passenger seat	Stretching out a hand above the front passenger seat	By stretching out a hand above the front passenger seat the search light is switched on. If you withdraw a hand from this area, the search light is switched off again.

The MBUX Interior Assistant supports the following interactions:

Switching the reading light and search light and on or off

Requirements:

- For the reading light:
 - The function is available when it is dark.

- The hand movement takes place in the interaction area below the inside rearview mirror.
- For the search light:
 - The function is available when it is dark.
- The hand movement takes place in the interaction area above the front passenger seat.
- The seat belt on the front passenger seat must **not** be inserted in the seat belt buckle.

Switching the reading light on and off

Briefly move a hand up or down beneath the inside rearview mirror.

The reading light is switched on or off for the driver or the front passenger.

Switching the search light on and off

- To switch on: reach across the front passenger seat with a hand.
 The search light is switched on for the driver.
- To switch off: take a hand back away from the front passenger seat.
 The search light is switched off again.

Information on profiles, themes, suggestions and favorites

For electrically adjustable seats observe the following notes. WARNING Risk of becoming trapped during adjustment of the driver's seat after calling up a driver profile

Selecting a user profile may trigger an adjustment of the driver's seat to the position saved under the user profile. You or other vehicle occupants could be injured in the process.

Make sure that when the position of driver's seat is being adjusted using the multimedia system, no people or body parts are in the seat's range of movement.

If there is a risk of someone becoming trapped, stop the adjustment process immediately:

 a) Tap the warning message on the media display.

or

 b) Press a memory position button or a seat adjustment switch on the driver's door.

The adjustment process will be stopped.

The driver's seat is equipped with an access preventer.

If the driver's door is open, the driver's seat will **not** be set after calling up the driver's profile.

Profiles store your vehicle settings and settings for the multimedia system. If the vehicle is used by several drivers, the driver can select their own profile without changing the stored profile settings of other drivers.

(i) Information on profiles from Mercedes me connect can be found in the Digital Operator's Manual.

Vehicle settings are, for example, driver's seat, steering wheel and mirror settings, climate control and ambient lighting. For the settings of the multimedia system, you can select, for example, radio stations, previous destinations as well as themes, suggestions and favorites.

For recurring driving situations, such as long drives on the freeway, you can save your preferred settings in a theme in the vehicle. In a theme you can save the display of the digital map, your preferred radio station and preferred drive program, for example. The vehicle can learn the habits of the driver. It then offers suggestions for the most probable navigation destinations, media sources, radio stations or contacts. The requirements for that are the selection of a profile, your consent to the recording of data and sufficient collected data.

Favorites provide quick access to applications that are used often. You can select favorites from categories or add them directly to an application.

Configuring profiles, themes and suggestions

Multimedia system:

Creating a new profile

- Select + Create Profile .
- Select an avatar.
- Enter the name and confirm with OK.
- Select Continue 🕥 .
- Select Current Settings.
- Select Save.

- Activate Bluetooth[®] and select Connect Phone, to connect a mobile phone with the user profile.
- Select Finish.

Selecting profile options

Select ••• for a profile.

The following functions are available:

- Editing, resetting or deleting a profile
- Resetting themes or favorites
- Configuring suggestions

Configuring suggestions

- Select ••• for a profile.
- Select Suggestion Settings.
- Switch Allow Destination Suggestions, Allow Music Suggestions and Allow Contact Suggestions on or off.
- To deactivate the learning function for one day: activate Deact. Learning for 24 h. For 24 hours no new actions will be trained and no data recorded for the active profile. Suggestions will continue to be shown.

Example: if the option is switched on and a route to a new destination has been calculated, this destination would not be taken into account for the learning function.

Creating new themes

- ▶ Select 🟠.
- Select THEMES.
- Select + Create Theme. The settings which are saved in the theme are shown.
- Select Continue >.
- Select Audio and Navigation (Navigation) and store the active settings in the theme.
- Select Continue \sum .
- Select an entry screen.
- Select Continue \sum .
- Select an image.
- Enter the names into the entry field and confirm with OK.
- Select Save.

System settings

Overview of the system settings menu

In the system settings menu, you can make settings in the following menus and control elements:

- Display
 - Styles
 - Instrument lighting
 - Display brightness
 - Edge lighting
 - Day/night design
- Control elements
 - Keyboard language and handwriting recognition
 - Sensitivity of the touchpad
 - Sensitivity of the Touch Controls
- Voice Control System
- Sound
 - Entertainment
 - Navigation and traffic announcements

- Telephone
- Voice amplification to the rear
- Connectivity
 - Wi-Fi, Bluetooth[®], NFC
- Time & date
- Language
- Units for distance
- Software updates
- Data import/export
- PIN protection
- System Reset

Information on important system updates

Important system updates may be necessary for the security of your multimedia system's data. Install these updates, or else the security of your multimedia system cannot be ensured.

A system update consists of three steps:

- Downloading or copying of the data required for installation
- Installation of the downloaded system update

- Activation of the downloaded system update by restarting the system
- (i) If automatic software updates are activated, the system updates will be downloaded automatically.

The multimedia system provides a message when a system update is available.

You have the following selection options:

Accept and Install

The system update will be downloaded in the background.

• Information

Information about the pending system update is displayed.

• Later

The system update can be downloaded manually at a later time.

Deep system updates

Deep system updates access vehicle or system settings and can therefore only be carried out when the vehicle is stationary and the ignition is switched off. If the download of a deep system update is completed and the downloaded system update is ready for installation, you will be informed of this after the next ignition cycle, for example.

(i) Park the vehicle safely in a suitable location before starting the installation.

Requirements for the installation:

- The ignition is switched off.
- Notes and warnings have been read and accepted.
- The electric parking brake is applied.

If all requirements have been fulfilled, the downloaded system update is installed. The multimedia system cannot be operated while the downloaded system update is being installed and vehicle functions are restricted.

If errors should occur during the installation, the multimedia system automatically attempts to restore the previous version. If restoration of the previous version is not possible, a symbol appears on the media display. Consult a qualified specialist workshop to resolve the problem.

Setting up a Wi-Fi hotspot

Requirements:

- To set up the Wi-Fi connection of the multimedia system with external hotspots: your vehicle does not have a permanently installed communication module.
- The device to be connected supports at least one of the types of connection described.

Multimedia system:

→ 🕞 ≫ Settings ≫ System ≫ Wi-Fi & Bluetooth

Activating/deactivating Wi-Fi

Select Wi-Fi.

Connecting the multimedia system with an external hotspot using Wi-Fi

The type of connection established must be selected on the multimedia system and on the device to be connected.

- (i) The connection procedure may differ depending on the device. Follow the instructions that are shown in the display. Further information can be found in the manufacturer's operating instructions.
- Select Internet Settings.
- Select Connect via Wi-Fi.
- Select Add Hotspot.

Connecting using a QR code

- Select the options f the desired Wi-Fi network.
- Select Connect using QR code.
- Scan the displayed QR code with the device to be connected.
 The Wi-Fi connection is established.

Connecting using a security key

- Select the options of the desired Wi-Fi network.
- Select Connect Using Security Key.

- Have the security key displayed on the device to be connected (see the manufacturer's operating instructions).
- Enter this security key on the multimedia system.
- Confirm the entry with **ok**.

Connecting using a WPS PIN

- Select the options of the desired Wi-Fi network.
- Select Connect via WPS PIN Input. The multimedia system generates an eightdigit PIN.
- Enter this PIN on the device to be connected.
- Confirm the entry.

Connecting using a button

- Select the options of the desired Wi-Fi network.
- Select Connect via WPS PBC.
- Select "Connect via WPS PBC" in the options on the device to be connected (see the manufacturer's operating instructions).

- Press the WPS button on the device to be connected.
- Select Continue in the multimedia system.

Activating automatic connection

- Select Connect via Wi-Fi.
- Select the options f the desired Wi-Fi network.
- Activate Permanent Internet Connection.

Connecting with a known Wi-Fi network

- Select Connect via Wi-Fi.
- Select a Wi-Fi network.
 The connection is established again.

Configuring the multimedia system as a Wi-Fi hotspot for external devices

The type of connection established depends on the device to be connected. The function must be supported by the multimedia system and by the device to be connected. The type of connection established must be selected on the multimedia system and on the device to be connected.

Select Vehicle Hotspot.

Select Connect Device to Vehicle Hotspot.

Connecting using WPS PIN generation

- Select Connect via WPS PIN Generation.
- Enter the PIN shown in the media display on the device to be connected and confirm.

Connecting using WPS PIN entry

- Select Connect via WPS PIN Input.
- Enter the PIN that is shown on the external device's display on the multimedia system.

Connecting using a button

- Select Connect via WPS PBC.
- Press the push button on the device to be connected (see the manufacturer's operating instructions).
- Select Continue.

Connecting using a security key

Select Connect Device to Vehicle Hotspot.
 A security key is displayed.

- Select the vehicle from the device to be connected. The vehicle is displayed with the DIRECT-MBUX XXXXX network name.
- Enter the security key which is shown in the media display on the device to be connected.
- Confirm the entry.

Connecting using NFC

- Select Connect via NFC.
- Activate NFC on the mobile device (see the manufacturer's operating instructions).
- Hold the device to be connected at the vehicle's NFC interface.
- Select Finished.

The mobile device is now connected to the multimedia system hotspot via NFC.

Generating a new security key

- Select Vehicle Hotspot.
- Select Generate Security Key.
 A connection will be established with the newly created security key.

To save a security key: select Save. When a new security key is saved, all existing Wi-Fi connections are then disconnected. If the Wi-Fi connections are being re-established, the new security key must be entered.

System language

Notes on the system language

This function allows you to determine the language for the menu displays and the navigation announcements. The selected language affects the characters available for entry. The navigation announcements are not available in all languages. If a language is not available, the navigation announcements will be in English.

Setting the system language

Multimedia system:

→ 🕞 ≫ Settings ≫ System ⇒ 🌐 Language

Set the language.

 If you are using Arabic map data, the text information can also be shown in Arabic on the navigation map. To do so, select العربية as the language from the language list. Navigation announcements are then also made in Arabic.

Resetting the multimedia system (reset function)

 WARNING Risk of accidents due to failure of multimedia display functions

While the multimedia system is being reset, its functions such as the rear view camera are not available.

 Only reset the multimedia system when the vehicle is stationary.

Multimedia system:

→ 🕞 >> Settings >> System >> Reset

Personal data is deleted, for example:

- Station presets
- Connected mobile phones

- Vehicles with rear telephony: handset connection
- Individual user profiles
- (i) The guest profile is reset when the settings are restored to the factory settings.
- Vehicles with rear telephony: The handset must be in the cradle while the system is reset.

A prompt appears again asking whether you really wish to reset.

Select Yes.

The multimedia system is reset to the factory settings. If you have set a PIN for your system, this will also be reset.

Drive system settings

Calling up the energy flow display

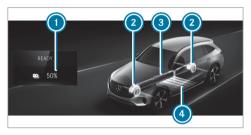

Multimedia system:

→ 🔂 > EQ

Select Energy Flow.

The visualization of the energy flow in the vehicle is displayed. In addition to the energy flow, the current condition of charge of the high-voltage battery is also displayed.

Functions of the energy flow display

- Condition of charge of the high-voltage battery
- Electric motors (drive system)
- Intersection Energy flow
- 4 High-voltage battery

The active components of the drive system are highlighted in the energy flow display. The energy

flow between the individual components is shown in color.

The energy flow is shown in different colors depending on the operating status:

- White: strong acceleration (boost effect)
- **Copper:** driving at constant speed or with moderate acceleration
- **Blue:** recuperation (charging the high-voltage battery) or overrun mode

Navigation

Notes on navigation

Route guidance with augmented reality

▲ WARNING Risk of accident and injury as a result of distraction, incorrect depiction or wrong interpretation of the display

The camera image of the augmented reality display is not suitable as a guide for driving.

Always keep an eye on the actual traffic situation.

- Avoid extended observation of the camera image.
- WARNING Risk of accident and injury due to imprecise positioning of additional information

The additional information from the augmented reality display may be inaccurate and is not a substitute for observing and assessing the actual driving situation.

 Always keep an eye on the actual traffic situation when carrying out all driving maneuvers.

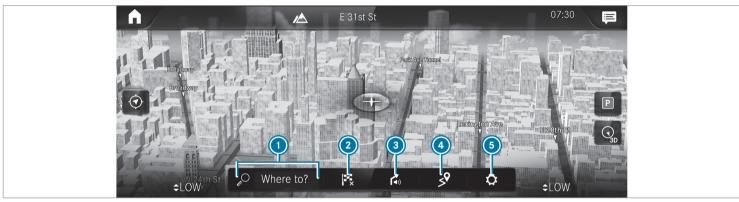

Switching navigation on

Multimedia system:

- → 🕞 Navigation (Navigation)
- Alternatively: press the <u>May</u> button.
 The map displays the current vehicle position.
 The navigation menu is shown.

The navigation menu is hidden if route guidance is active. **To show:** tap on the touchscreen. The menu is hidden automatically.

Navigation overview

Example: digital map with navigation menu Enters a POI or address and additional desti-

- Enters a POI or address and additional destination entry options
- Cancels active route guidance
- Repeats a navigation announcement and switch navigation announcements on or off
- ON THE WAY menu with Route Overview, Alternative Routes and Report Traffic Incident (Car-to-X) TRAFFIC menu with Traffic Announcements, Area Alerts and Live Traffic Subscription Info
- Quick access for Traffic, Parking, Range and Highway Information as well as options for View, Announcements and Route via Advanced

Displays Route List POSITION menu with Save Position and Compass

Entering a destination

Multimedia system:

The following entries can be made, for example:

- City, street, house number
- Street, city
- ZIP code
- POI name or POI category, e.g. Parking
- Contact name
- Select a search result in list (3).
- ▶ Calculate the route (\rightarrow page 253).
- (i) You can find further information about destination entry, e.g. 3 word addresses, in the Digital Operator's Manual.

Changing country

- Select the indicator for federal state or province ①.
- Select the federal state or the province in ①.
- Enter the country indicator.
- Select the country on list (3).
- Select the federal state or the province from list ③.

Using online search

(i) Requirements: the media display shows an Internet connection in the status line with the symbol.

Destination entry uses online map services. If the on-board search finds no suitable destinations or if you change countries, the online search is available.

For the destination you can enter an address, a POI or a three-word address.

- Enter the destination in input line ②.
 The search results are displayed.
- Select the destination in the list.
 The detailed view for the route is displayed.
- or

Select country indicator (1).

- Select the provider for the online service from the countries list.
- Enter the destination in input line 2.
- Select the destination in the list.

Calculating a route with Electric Intelligence and using settings for route guidance

Requirements:

- The destination has been entered.
- The destination address is shown.
- · For navigation with Electric Intelligence:
 - Mercedes me connect is available.
 - You have a Mercedes me connect user account and the vehicle is connected with the account.
 - The "Electric Intelligence Remote and Navigation Services" option is available and activated in the Mercedes me Portal.
 - The scope includes the "Navigation with Electric Intelligence" and "Display of charging stations" services.
 - The Electric Intelligence route option is switched on.

Multimedia system:

→ 🕞 > Navigation

A route has been mapped.

Select 🚺.

The route with Electric Intelligence is automatically and intelligently calculated to the destination. This is updated during route guidance. The route with Electric Intelligence contains the required charging stations as intermediate destinations. The charging stations are determined taking account of the driving distance and the estimated charging times. Route guidance begins.

or

or

Select 🖉.

Select Set as Waypoint. The destination address is set as the next

intermediate destination.

Select Start New Route Guidance.

The destination address is set as the new destination. The previous destination and the intermediate destinations are deleted. If required the multimedia system sets charging stations as intermediate destinations. Route guidance to the new destination begins.

Switching on the Electric Intelligence route option

- Select 🚺 in the navigation menu.
- Select Advanced.
- Select Route.
- Activate Electric Intelligence.

Selecting route settings

🕨 Select 🚺.

- Select Advanced.
- Select Route.
- Select the route type.
- ► Take traffic information into consideration with Dynamic Route Guidance ∑.
- Select route options with Avoid Options.
- Activate Suggest Alternative Route.
 Alternative routes are calculated for every route.
- Activate Activate Commuter Route. If the requirements are met, the multimedia system automatically detects that the vehicle is on a commuter route. Route guidance begins without voice output.

Activating route guidance with augmented reality

During route guidance, tap on the camera symbol on the media display.

The camera image will be shown instead of the navigation map before a turning maneuver and will show additional information.

 To return to the navigation map: tap on the camera symbol again.

Displaying additional information in the camera image

- 🕨 Select 🚺.
- Select Advanced.
- Select Augmented Reality.
- Activate Street Names and House Numbers. During route guidance, street names and house numbers are shown in the camera image.

Using map functions

Multimedia system:

→ 🕞 > Navigation

Setting the map scale

- To zoom in: tap twice quickly with one finger on the media display.
- To zoom out: tap with two fingers on the media display.

Moving the map

Move one finger in any direction on the touchscreen.

Selecting map orientation

- Tap repeatedly on the compass symbol on the map.
- The view changes in the sequence 3D, 2D Heading Up to 2D North Up.

Switching highway information on/off

- Select 🜔.
- Activate or deactivate Highway Information.

Using services

Requirements:

- There is an Internet connection.
- Mercedes me connect is available.
- You have set up a user account in the Mercedes me Portal.
- The vehicle is connected to a user account and you have accepted the conditions of use for the service.

Further information can be found at: https://www.mercedes.me

- The service is available.
- The service has been activated at an authorized Mercedes-Benz Center.
- The following additional conditions apply to the Parking service:
 - The navigation services option is available, subscribed to and activated in the Mercedes me Portal.
 - The Parking service is within the scope of the Navigation Services.

Multimedia system:

→ 🕞 > Navigation

Displaying the traffic situation with Live Traffic Information

- 🕨 Select 🚺.
- Activate Traffic.
- Select Advanced.
- Select View.
- Select Map Elements.

 Switch on Traffic Incidents, Free Flowing Traffic and Delay.

If traffic information has been received, then traffic incidents such as roadworks, road blocks, local area reports (e.g. fog) and warning messages are displayed.

The traffic delay is displayed for the current route. Traffic delays lasting one minute or longer are taken into consideration.

Displaying hazard warnings with Car-to-X-Communication

If hazard warnings are available these can be shown as symbols on the map. The display depends on the settings for the Traffic and Traffic Incidents options.

 Set the options.
 If Traffic is switched off and Traffic Incidents is switched on, the symbols are shown on the prospective route.

Displaying weather information and other map contents

- 🕨 Select 🚺 .
- Select Advanced.

- Select View.
- Select Map Elements.
- Scroll up and show the ONLINE MAP CON-TENT category.
- Switch on a service, e.g. Weather. Current weather information is displayed on the navigation map, e.g. temperature or cloud cover.

Parking service

 NOTE Damage to the vehicle due to not observing the maximum permitted headroom clearance

If the vehicle height is greater than the maximum permitted headroom clearance, the roof and other parts of the vehicle may be damaged.

- Observe the signposted headroom clearance.
- If the vehicle height is greater than the permitted headroom clearance, do not enter.

Observe the changed vehicle height with add-on roof equipment.

! NOTE Before selecting the parking option

The data is based on information provided by the respective service provider.

Mercedes Benz accepts no liability for the accuracy of the information provided relating to the parking garage/parking lot.

- Always observe the local Information and conditions.
- (i) This service is not available in all countries.
- Select () and activate Parking.
- Tap on P in the map.
- Select a parking option. The map shows the parking options in the vicinity.

The following information is displayed (if available):

Destination address, distance from current vehicle position and arrival time

- Information on the parking garage/parking lot, for example:
 - Opening times
 - Parking charges
 - Current occupancy
 - Maximum parking time
 - Maximum access height

The maximum access height shown by the parking service does not replace the need for observation of the actual circumstances.

- Available payment options (Mercedes pay, coins, bank notes, cards)
- Details on parking tariffs
- Number of available parking spaces
- Payment method (e.g. at the parking meter)
- Services/facilities at the parking option
- Telephone number
- Calculate the route (\rightarrow page 253).

Notes on the dashcam

NOTE Before using the dashcam

You are legally responsible for operation and use of the dashcam functions. The legal requirements relating to operation and use of the dashcam can vary depending on the country in which the dashcam is operated. Therefore, observe the legal requirements, in particular the data protection regulations, in your country.

For this reason, before using the dashcam inform yourself about the regulation details for the respective country.

This function is not permitted in all countries.

 Observe the country-specific regulations.

Selecting a USB device for a video recording with the dashcam

Requirements:

 At least one USB device is connected with the multimedia system . Multimedia system:

- Select the USB device.
- (i) When USB devices contain multiple partitions, recorded video files are not always displayed in the recording list.

Mercedes-Benz recommends that you use USB devices with one partition.

Starting or stopping video recording with the dashcam

Requirements:

- A USB device is connected with the multimedia system .
- The vehicle is switched on.

Multimedia system:

- If several USB devices are connected with the multimedia system, select a USB device (→ page 257).
- Select the Individual Recording or Loop Recording recording mode.
 If Individual Recording is selected and the memory is full the recording stops.

If Loop Recording has been selected, several short video files are recorded. When the memory limit is reached, the oldest video file is deleted and recording is continued automatically.

To start: select Start Recording.

The length of the recording is shown. The **Please do not remove the storage medium**. message appears. The video file is stored on the USB device.

To end: select End Recording.

A report may appear in the following cases:

- For the Individual Recording recording mode: the memory is full or there are only a few minutes recording time available. The video recording stops or will be stopped imminently. Change the USB device or delete a video file.
- If a video recording has started and a national border is detected, the National Border Crossed. Please observe the country-specific regulations on video recording. message appears.

This function is not available in all countries.

• The camera is not functional, the Camera Unavailable message appears.

Have the camera checked in an authorized Mercedes-Benz Center.

Telephone

Telephony

Notes on telephony

▲ **WARNING** Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

▲ WARNING Risk of an accident from operating mobile communication equipment while the vehicle is in motion

Mobile communications devices distract the driver from the traffic situation. This could also cause the driver to lose control of the vehicle.

- As the driver, only operate mobile communications devices when the vehicle is stationary.
- As a vehicle occupant, only use mobile communications devices in the areas intended for this purpose, e.g. in the rear passenger compartment.

You must observe the legal requirements for the country in which you are currently driving when operating mobile communication equipment in the vehicle.

WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around

and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects so that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from stowage spaces, parcel nets or stowage nets.
- Close the lockable stowage spaces before starting a journey.
- Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the trunk/cargo compartment.

Observe the additional information on stowing mobile communications devices correctly:

• Loading the vehicle (\rightarrow page 106) **Bluetooth® connection:** The menu view and the available functions in the telephone menu are in part dependent on the Bluetooth[®] profile of the connected mobile phone. Full functionality is only available if the mobile phone supports both of the following Bluetooth[®] profiles:

- PBAP (Phone Book Access Profile)
 - The contacts on the mobile phone are shown automatically on the multimedia system.
- MAP (Message Access Profile)
 - The mobile phone message functions can be used on the multimedia system.

Irrespective of this, $\mathsf{Bluetooth}^{\textcircled{B}}$ audio functionality can by used with any mobile radio unit.

For information on the range of functions of the mobile radio unit to be connected, see the manufacturer's operating instructions.

Network connection:

The following cases can lead to the call being disconnected while the vehicle is in motion:

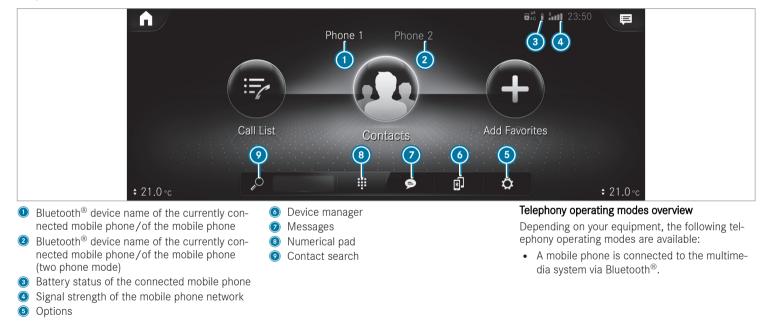

- You switch into a transmission/reception station, in which no communication channel is free.
- The SIM card used is not compatible with the network available
- A mobile phone with "Twincard" is logged into the network with the second SIM card at the same time

The multimedia system supports calls in HD Voice[®] for improved speech quality. A requirement for this is that the mobile phone and the mobile phone network provider of the person you are calling support HD Voice[®].

Depending on the quality of the connection, the voice quality may fluctuate.

Further information can be obtained from an authorized Mercedes-Benz Center or at: https://www.mercedes-benz.com/connect

Telephone menu overview

- Two mobile phones are connected with the multimedia system via Bluetooth[®] (two phone mode).
 - You can use all the functions of the multimedia system with the mobile phone in the foreground.
 - You can receive incoming calls and messages with the mobile phone in the background.

You can interchange the mobile phone in the foreground and background.

Connecting a mobile phone

Requirements:

- Bluetooth[®] is activated on the mobile phone (see the manufacturer's operating instructions).
- Bluetooth[®] is activated on the multimedia system.

Multimedia system:

→ 🕞 >> Phone

Searching for a mobile phone

- 🕨 Select 🛐 .
- Select Connect New Device.

Connecting a mobile phone

Authorization follows using secure simple pairing.

- Select a mobile phone.
 A code is displayed in the multimedia system and on the mobile phone.
- If both codes match, confirm the code on the mobile phone.

Functions in the telephony menu

In the telephony menu you have the following functions, for example:

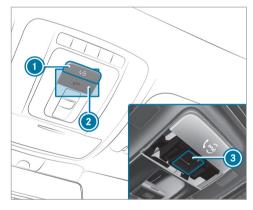

- Making calls, e.g.:
 - 🕜 Accept a call
 - End Call
 - Create Confer. Call
 - Accepting or rejecting a waiting call

- Managing contacts, e.g.:
 - Downloading mobile phone contacts
 - Managing the format of a contact's name
 - Saving a contact as a favorite
- Receiving and sending messages, e.g.:
 - Using the read-aloud function
 - Dictating a new message

Mercedes me app

Mercedes me calls

Making a call via the overhead control panel

- 1 me button for service or information calls
- 2 SOS button cover
- ③ SOS button (emergency call system)

Making a Mercedes me call

Press me button ①.

Making an emergency call

- To open the cover of SOS button ②, press it briefly.
- Press and hold SOS button (3) for at least one second.

If a Mercedes me call is active, an emergency call can still be triggered. This has priority over all other active calls.

Information about the Mercedes me call

A call to the Mercedes-Benz customer center has been initiated via the me button in the overhead control panel or the multimedia system (\rightarrow page 263).

Using the voice dialog system you access the desired service:

- Accident and Breakdown Management
- Mercedes-Benz customer center for general information about the vehicle

You can find information on the following topics:

Activation of Mercedes me connect

- Operating the vehicle
- Nearest authorized Mercedes-Benz Center
- Other products and services from Mercedes-Benz

Data is transferred during the connection to the Mercedes-Benz customer center (\rightarrow page 265).

Calling the Mercedes-Benz customer center using the multimedia system

Requirements:

- Access to a mobile phone network is available.
- The contract partner's mobile network coverage is available in the respective region.
- The vehicle must be switched on so that vehicle data can be transferred automatically.

Multimedia system:

Call Mercedes me connect.

After confirmation, the multimedia system sends the required vehicle data. The data transfer is shown in the media display.

Then, you can select a service and be connected to a specialist at the Mercedes-Benz customer center.

Calling the Mercedes-Benz Customer Center after automatic accident or breakdown detection

Requirements:

- The vehicle has detected an accident or breakdown situation.
- The vehicle is stationary.
- The hazard warning lights are switched on.

(i) This function is not available in all countries.

The vehicle can detect accident or breakdown situations under certain circumstances.

In the event an accident or breakdown is detected, the emergency guide shows safety notes in the multimedia system display.

After quitting the emergency guide display on the multimedia system, a prompt appears asking whether you would like to get support from the Mercedes-Benz Customer Center.

Select Call.

- The vehicle data is sent automatically (→ page 266).
- The Mercedes-Benz Customer Center takes your call and organizes the breakdown and accident assistance.

You may be charged for these services.

- (i) Depending on the severity of the accident, an automatic emergency call can be initiated. This has priority over all other active calls.
- (i) In addition, if the Mercedes me connect service "Telediagnostics" is active, a similar prompt can appear after a delay in the event of a breakdown. If you are already in contact with the Mercedes-Benz Customer Center or have already received support, this prompt can be ignored or declined.
- (i) If you answer the prompt for support from the Mercedes-Benz Customer Center with Later, the message will be hidden and appear again later.

The prompt triggered by the Mercedes me connect service "Telediagnostics", can either

be confirmed or declined. After being declined, this will not be shown again.

Arranging a service appointment via a Mercedes me call

If you have activated the maintenance management service, relevant vehicle data is transferred automatically to the Mercedes-Benz customer center. You will then receive individual recommendations regarding the maintenance of your vehicle.

Regardless of whether you have consented to the maintenance management service, the multimedia system reminds you after a certain amount of time that a service is due. A prompt appears asking if you would like to make an appointment.

 To arrange a service appointment: select Call. After your agreement, the vehicle data is transferred and the Mercedes-Benz customer center takes your preferred appointment date. The information is then sent to your desired service outlet.

This will contact you to confirm the appointment and if necessary consult about the details. (i) If you select Later after the service message appears, the message is hidden and reappears at a later time.

Transferred data during a Mercedes me call

When you make a service call via Mercedes me, data is transmitted. This enables targeted advice and a smooth service.

The following requirements must be fulfilled for the transfer of the data:

- The vehicle is switched on.
- The required data transfer technology is supported by the mobile phone network provider.
- The quality of the mobile connection is sufficient.

Multi-stage transfer depends on the following factors:

- Reason for the initiation of the call
- The available mobile phone transmission technology.
- The activated Mercedes me connect services.
- The service selected in the voice control system.

Data transfer if Mercedes me connect services are not activated

If no Mercedes me connect services are activated, the following data is transferred:

- Vehicle identification number
- Time of the call
- Reason for the initiation of the call
- Country indicator of the vehicle
- Set language for the multimedia system
- Telephone number of the communication platform installed in the vehicle

If a call is made for a service appointment via the service reminder, the following data is also transmitted:

· Current mileage and maintenance data

If a call is made after automatic accident or breakdown detection using the multimedia system, the following data is also transmitted:

- Current mileage and maintenance data
- Current vehicle location

If Accident and Breakdown Management is called via the voice control system, the following data can also be called up from the vehicle by the Mercedes-Benz customer center:

• Current vehicle location

Data transfer if Mercedes me connect services are activated

An overview of the data transmitted can be found in the respective terms of use for Mercedes me connect services. These can be obtained in the Mercedes me portal: https:// me.secure.mercedes-benz.com

Data processing

The data transmitted within the scope of the call is deleted from the processing system after the call is finished, in so far as this data is not being used for other activated Mercedes me connect services.

The incident-specific data is processed and stored in the Mercedes-Benz customer center and, if required to process the incident, forwarded to the service partner authorized by the Mercedes-Benz customer center. Please take note of the data protection information on the Mercedes me Internet

page https://www.mercedes.me or in the recorded message immediately after calling the Mercedes-Benz customer center.

(i) The recorded message is not available in every country.

Mercedes me connect

Information on Mercedes me connect

Mercedes me connect consists of multiple services.

You can use the following services via the multimedia system and the overhead control panel, for example:

- Accident and Breakdown Management (me button or situation-dependent display in the multimedia system)
- Mercedes-Benz emergency call system (automatic emergency call and SOS button)

The Mercedes me connect Accident and Breakdown Management and the Mercedes-Benz emergency call center are available to you around the clock. The me button and the SOS button can be found on the vehicle's overhead control panel (\rightarrow page 263).

You can also call the Mercedes-Benz customer center using the multimedia system (\rightarrow page 263).

Please note that Mercedes me connect is a Mercedes-Benz service. In emergencies, first call the national emergency services using the standard national emergency service telephone numbers. In emergencies, you can also use the Mercedes-Benz emergency call system (\rightarrow page 270).

Observe the conditions of use for Mercedes me connect and other services. These can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Further information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Information on Mercedes me connect Accident and Breakdown Management

The Accident and Breakdown Management can include the following functions:

• Supplement to the Mercedes-Benz emergency call system (→ page 270)

If necessary, the contact person at the Mercedes-Benz emergency call center forwards the call to Mercedes me connect Accident and Breakdown Management. Forwarding the call is however not possible in all countries.

 Breakdown assistance by a technician on location and/or the towing away of the vehicle to the nearest authorized Mercedes-Benz Center

You may be charged for these services.

 Addition to the emergency guide after automatic accident or breakdown detection (→ page 264)

In the event of a breakdown or accident, further vehicle data is sent which enables optimal support by the Mercedes-Benz customer center and the authorized service partner or breakdown assistance.

 Addition to the Mercedes me connect service Telediagnostics

With the Telediagnostics function, specific wear and failure reports are recorded by the service provider, in so far as these can be clearly interpreted and are available through the monitoring of components that are subject to diagnostics.

If your vehicle detects a breakdown or threat of a breakdown, you may be prompted via the multimedia system to contact the Mercedes-Benz customer center for further help. This prompt in the multimedia system only appears when the vehicle is stationary.

(i) These services are subject to technical restrictions such as the mobile phone coverage, mobile network quality and the ability of the processing systems to interpret the transferred data. In some circumstances, this can result in delays or the failure of the information to appear in the multimedia system.

More information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Data transferred during Mercedes me connect call services

The data transferred during a Mercedes me connect call depends on:

- · The reason for initiation of the call
- The service that is selected in the voice control system
- The activated Mercedes me connect services

You can find out which data is transferred when using the services in the currently valid Mercedes me connect terms of use and the data protection information for Mercedes me connect. You can find these in your Mercedes me user account.

Overview of the Mercedes me & Apps menu

When you log in with a user account to the Mercedes me Portal, then services and offers from Mercedes-Benz will be available to you.

For more information consult an authorized Mercedes-Benz Center or visit the Mercedes me portal: https://me.secure.mercedes-benz.com

(i) Make sure you always keep the Mercedes me apps updated.

You can call up the menu using Mercedes me & Apps in the multimedia system.

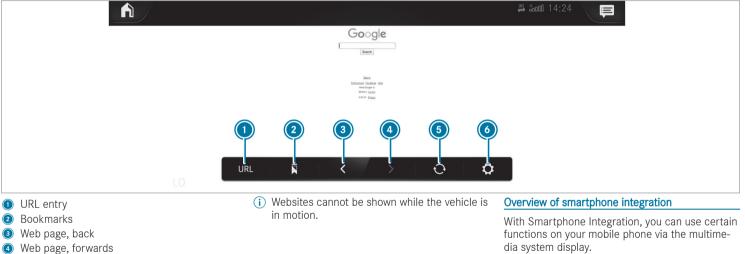

In the Mercedes me & Apps menu, the following options can be available:

- Connecting the vehicle with the Mercedes me user account
- Deleting a connection between a Mercedes me user account and the vehicle
- Calling up the Mercedes me services
- Calling up apps such as, In-Car Office or the web browser depending on availability

Web browser overview

The web browser is started using the Mercedes

me & Apps menu.

Only one mobile phone at a time can be connected via Smartphone Integration to the multimedia

- To refresh/stop
- Options

system. Also for use with two phone mode with smartphone integration, only one additional mobile phone can be connected using Bluetooth[®] with the multimedia system.

The full range of functions for Smartphone Integration is only possible with an Internet connection. The appropriate application must be downloaded on the mobile phone to use Smartphone Integration. The mobile phone must be switched on and connected to a USB port with the symbol on the multimedia system using a suitable cable.

Apps for Smartphone Integration

- Apple CarPlay®
- Android Auto
- (i) For safety reasons, the first activation of Smartphone Integration on the multimedia system must be carried out when the vehicle is stationary and the parking brake is applied.

You can start Apple $\mbox{CarPlay}^{\mbox{$\mathbb{8}$}}$ or Android Auto from the device manager.

(i) Mercedes-Benz recommends disconnecting the connecting cable only when the vehicle is stationary.

Overview of transferred vehicle data

When using Smartphone Integration, certain vehicle data is transferred to the mobile phone. This enables you to get the best out of selected mobile phone services. Vehicle data is not directly accessible.

The following system information is transmitted:

- Software release of the multimedia system
- System ID (anonymized)

The transfer of this data is used to optimize communication between the vehicle and the mobile phone.

To do this, and to assign several vehicles to the mobile phone, a vehicle identifier is randomly generated.

This has no connection to the vehicle identification number (VIN) and is deleted when the multimedia system is reset (\rightarrow page 249). The following driving status data is transmitted:

- Transmission position engaged
- Distinction between parked, standstill, rolling and driving
- Day/night mode of the instrument cluster
- Drive type

The transfer of this data is used to alter how content is displayed to correspond to the driving situation.

The following position data is transmitted:

- Coordinates
- Speed
- · Compass direction
- Acceleration direction

This data is used by the mobile phone to improve the accuracy of the navigation (e.g. for continuation in a tunnel).

Mercedes-Benz emergency call system Information on the Mercedes-Benz emergency call system

Your vehicle is equipped with the Mercedes-Benz emergency call system ("eCall"). This feature can help save lives in the event of an accident. eCall in no way replaces assistance provided from dialing 911.

Mercedes-Benz eCall only functions in areas where mobile phone coverage is available from the wireless service providers. Insufficient network coverage from the wireless service providers may result in an emergency call not being transmitted.

eCall is a standard feature in your Mercedes-Benz vehicle. In order to function as intended, the system relies on the transmission of data detailed in the "Mercedes-Benz emergency call system data transmission" section that follows (\rightarrow page 272).

To disable eCall, a customer must visit an authorized Mercedes-Benz Service department to deactivate the vehicle's communication module.

Deactivation of this module prevents the activation of any and all Mercedes me connect services. After the deactivation of eCall, automatic emergency call and manual emergency call will not be available.

The vehicle must be switched on before an automatic emergency call can be made.

- (i) eCall is activated at the factory.
- eCall can be deactivated by an authorized Mercedes-Benz dealer. Please note that in the event ownership of the vehicle is transferred to another owner in its deactivated state, eCall will remain deactivated unless the new owner visits an authorized Mercedes-Benz dealership to reactivate the system.

Overview of the Mercedes-Benz emergency call system

eCall can help to reduce the time between an accident and the arrival of emergency services at the site of the accident. It helps locate an accident site in places that are difficult to access. However, even if a vehicle is equipped with eCall, this does not mean the system is ON. As such,

eCall does not replace dialing 911 in the event of an accident.

An emergency call can be made automatically or manually.

Only make emergency calls if you or others are in need of rescue. Do not make an emergency call in the event of a breakdown or a similar situation.

Messages on the display

SOS NOT READY: the vehicle is not on or eCall not available.

During an active emergency call, <schar> appears in the display.

You can find more information on the regional availability of eCall at: https://www.mercedes-benz-mobile.com/extra/ecall/

(i) If there is a malfunction in the Mercedes-Benz emergency call system (e.g. a malfunction with the speaker, microphone, airbag, SOS button), a corresponding message appears on the display in the instrument cluster.

Triggering an automatic Mercedes-Benz emergency call

Requirements:

- The vehicle is switched on.
- The starter battery is sufficiently charged.

The Mercedes-Benz emergency call system triggers an emergency call automatically in the following cases:

- After activation of the restraint systems such as airbags or Emergency Tensioning Devices after an accident
- After an emergency stop automatically initiated by Active Emergency Stop Assist

The emergency call has been made:

- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center.

The Mercedes-Benz emergency call center can transmit the vehicle position data to one of the emergency call centers. The SOS button in the overhead control panel flashes until the emergency call is finished.

It is not possible to immediately end an automatic emergency call.

If no connection can be made to the emergency services either, a corresponding message appears in the media display.

Dial the local emergency number on your mobile phone.

If an emergency call has been initiated:

- Remain in the vehicle if the road and traffic conditions permit you to do so until a voice connection is established with the emergency call center operator.
- Based on the call, the operator decides whether it is necessary to call rescue teams and/or the police to the accident site.
- If no vehicle occupant answers, an ambulance is sent to the vehicle immediately.

Triggering a manual Mercedes-Benz emergency call

- To use the SOS button in the overhead control panel: press and hold the SOS button for at least one second (→ page 263).
- To use voice control: use the Voice Control System voice commands.

The emergency call has been made:

- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center.

The Mercedes-Benz emergency call center can transmit the vehicle position data to one of the emergency call centers.

- Remain in the vehicle if the road and traffic conditions permit you to do so until a voice connection is established with the emergency call center operator.
- Based on the call, the operator decides whether it is necessary to call rescue teams and/or the police to the accident site.

If no connection can be made to the emergency services either, a corresponding message appears in the media display.

 Dial the local emergency number on your mobile phone.

Ending an unintentionally triggered manual Mercedes-Benz emergency call

Using the multifunction steering wheel: select . Depress the button for several seconds.

Data transfer of the Mercedes-Benz emergency call system

In the event of an automatic or manual emergency call the following data is transmitted, for example:

- Vehicle's GPS position data
- GPS position data on the route (a few hundred meters before the incident) ()
- Direction of travel
- Vehicle identification number
- · Vehicle drive type
- Number of people determined to be in the vehicle

- Whether Mercedes me connect is available or not
- Whether the emergency call was initiated manually or automatically
- Time of the accident
- Language setting on the multimedia system

Data transmitted is vehicle information. For any questions about the collection, use and sharing of the eCall system data, please contact MBUSA's Customer Assistance Center at 800-FOR-MERC.

For Canada, please contact MBC's Customer Assistance Center at 1-800-387-0100.

Customer requests for covered information should be submitted via the same channels.

For accident clarification purposes, the following measures can be taken up to an hour after the emergency call has been initiated:

- The current vehicle position can be determined.
- A voice connection to the vehicle occupants can be established.

Radio & media

Overview of the symbols and functions in the media menu

Symbol	Designation	Function
0	Play	Select to start or continue playback.
0	Rest	Select to pause the playback.
	Repeat a track	Select to repeat the current track or the active playlist.Select once: the active playlist is repeated.Select twice: the current track is repeated.Select three times: the function is deactivated.
×	Random playback	Select to play back the tracks in random order.
	Skip forwards/back	Select to skip to the next or to the previous track.
*	Options	Select to show additional options.
.≣ſ	Categories	Select to show or search through available categories (e.g. playback lists, albums, artists, etc.).
2	Search	Select to search in the active menu. You can search for artists, genres or moods, for example.

Symbol	Designation	Function
0	Settings	Select to make settings.
	Home	Select to return to the home screen.
Ð	Messaging	Select to call up messaging.
	Full screen	Select to switch to full screen mode.

The following functions and settings are available in the media menu:

- Connecting external data storage media with the multimedia system (e.g. using USB or Bluetooth[®])
- Playing back audio or video files

Authorizing a Bluetooth ${}^{\textcircled{\mbox{\scriptsize B}}}$ audio device for media playback

Requirements:

Bluetooth[®] is activated on the multimedia system and audio equipment.

- The audio equipment supports the Bluetooth[®] audio profiles A2DP and AVRCP.
- The audio equipment is "visible" for other devices.

Multimedia system:

→ 🕞 >> Media >> Bluetooth >> 💲

With Bluetooth[®] audio, you can play back music files from an external data storage medium, e.g. your smartphone, using the MBUX multimedia system.

To play back audio files using the multimedia system, authorize the external data storage medium on the MBUX multimedia system.

Authorizing a new Bluetooth® audio device

- Select Connect New Device.
- Select an audio device. Authorization starts. A code is displayed on the multimedia system and on the mobile phone.
- If the codes are identical, confirm on the audio equipment.
- Select Only as Bluetooth Audio Device.
 The Bluetooth[®] audio equipment is connected with the multimedia system.

Connecting previously authorized Bluetooth® audio equipment

Select a Bluetooth[®] audio device from the list. The connection is being established.

Overview of the symbols and functions in the radio menu

Symbol	Designation	Function
Â	Home	Select to return to the home screen.
Þ	Messaging	Select to call up messaging.
	Skip forwards/back	Select to skip to the next or to the previous station.
0	Settings	 Select to have further options shown. Settings can be made to the following additional functions, for example: Navigation and traffic announcements Frequency fix function Radio additional text Emergency warnings The setting options are country-dependent.

Symbol	Designation	Function
HD	HD radio [®]	Select to switch the HD Radio [®] function on or off. This function is not available in all countries.
Ø	Silent function	Select to switch off the sound.
÷	Store radio stations	Select to save a station in the presets.
:=	Station list	Select to have the station list shown.
	Search	Select to search in the active menu. You can search for artists, genres or moods, for example.

Additional functions of TuneIn radio

(i) A relatively large volume of data can be transmitted when using TuneIn Radio.

Symbol	Designation	Function
0	Settings	The following additional settings are available in the TuneIn Radio menu:Selecting streamLogging on to or out of the TuneIn account
*	Favorites	Select during playback to save the station cur- rently set as a favorite.
	Play/Pause	Select to start, stop or continue playback.
I	Browse	Select to choose a category and then a radio station.

Additional functions of the satellite radio

SIRIUS XM[®] satellite radio offers more than 175 digital-quality radio channels providing 100% commercial-free music, sports, news and entertainment, for example. SIRIUS XM[®] satellite radio employs a fleet of high-performance satellites to broadcast around the clock throughout the USA and Canada. The satellite radio program is available for a monthly fee. Information about this can be obtained from a Sirius XM[®] Service Center and at https://www.siriusxm.com (USA) or https://www.siriusxm.ca (Canada). (i) Sirius, XM and all related marks and logos are trademarks of Sirius XM Radio Inc. and its subsidiaries. All other marks, channel names and logos are the property of their respective owners. All rights reserved.

Symbol	Designation	Function
©	Settings	 The following additional settings are available in the satellite radio menu: Activate child safety lock to lock channels with adult content Set alarm programming for music and sport alerts Create TuneMix lists to listen to music seamlessly
3	Playback control	Select to show the timeline. Tap any point on the timeline to skip forwards or back. Navigate to the end of the timeline to return to live mode.
	Play	Select to start or continue playback.
0	Rest	Select to pause the playback.

Depending on the frequency band selected, different functions are available to you.

Select the desired frequency band in the radio menu head runner.

Calling up Tuneln Radio

Requirements:

- The Tuneln Radio service is activated in the Mercedes me Portal.
- The data volume is available.

Depending on the country, data volume may need to be purchased.

- A fast Internet connection for data transmission free of interference.
- (i) Data volume can be purchased **directly from a mobile phone network provider** via the Mercedes me Portal.
- (i) The functions and services are countrydependent. For more information, consult an authorized Mercedes-Benz Center.

Multimedia system:

→ 🞧 🕨 Radio

- Select Tuneln Radio.
 The Tuneln menu appears. The last station set starts playing.
- (i) The connection quality depends on the local mobile phone reception.

Setting up satellite radio

Requirements:

- Satellite radio equipment is available.
- Registration with a satellite radio provider has been completed.
- If registration is not included when purchasing the system, your credit card details will be required to activate your account.

Multimedia system:

- · Select Service Information.

The service information screen appears showing the radio ID and the current subscription status.

- Establish a telephone connection.
- Follow the service staff's instructions. The activation process may take up to ten minutes.
- (i) You can also have the satellite service activated online. To do so, please visit https://

www.siriusxm.com (USA) or https:// www.siriusxm.ca (Canada).

Music and sport alerts

Multimedia system:

Setting music and sport alerts

This function enables you to program an alert for your favorite artists, tracks or sporting events. Music alerts can be saved whilst a track is being played and sport alerts can be saved during a live game. You can also specify sport alerts via the menu option. The system then continuously searches through all the channels.

Set a music or sports alert, to be informed of matches in the Live program.

Activating the music information function

Activate Music Alerts .

Setting a music alert

Select Add Alert.

Select Artists or Song in the dialog window. The alert is set for the current artist or track. If a match is found, a prompt appears asking whether you wish to change to the station.

Activating sports information

Setting a sport alert

- Select Add Alert.
- Select the team name or league in the dialog window.

Deleting individual sports and music alerts

Select Manage Music Alerts.

or

- Select Manage Sports Alerts.
- Select an artist or track.
- or
- Select a team.
- Select Delete Selected Entries. All highlighted alerts are deleted.

Deleting all sports and music alerts

Select Manage Music Alerts.

or

- Select Manage Sports Alerts.
- Select Delete All Entries.

Sound settings

Overview of functions in the sound menu

The setting options and functions available depend on the sound system installed. You can find out which sound system is installed in your vehicle in the Digital Operator's Manual.

Standard sound system and Advanced sound system

The following functions are available:

- Equalizer:
 - Treble, mid-range and bass
- Balance and fader
- Volume:
 - Automatic adjustment

Burmester[®] surround sound system and Burmester[®] high-end 3D surround sound system

The following functions are available:

- Equalizer:
 - Treble, mid-range and bass
- · Balance and fader
- Sound focus
- VIP seat (Burmester[®] high-end 3D surround sound system only)
- Sound profiles
- Volume:
 - Automatic adjustment

ASSYST PLUS service interval display

Function of the ASSYST PLUS service interval display

The ASSYST PLUS service interval display on the instrument display informs you of the next regular service due date.

Depending on the operating conditions of the vehicle, the remaining time or distance until the next service due date will be displayed.

You can hide this service display using the **S** back button on the left-hand side of the steering wheel.

You can obtain information concerning the servicing of your vehicle from a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

Displaying the service due date

On-board computer:

→ Service → ASSYST PLUS

The next service due date is displayed.

To exit the display: press the **S** back button on the left-hand side of the steering wheel.

Bear in mind the following related topic:

 Operating the on-board computer (→ page 232).

Information on regular maintenance work

! NOTE Premature wear through failure to observe service due dates

Maintenance work which is not carried out at the right time or incompletely can lead to increased wear and damage to the vehicle.

- Adhere to the prescribed service intervals.
- Always have the prescribed maintenance work carried out at a qualified specialist workshop.

NOTE Irreparable damage to the high-voltage battery due to maintenance work not being carried out

The high-voltage battery is subject to wear. Maintenance work which is not carried out in time can lead to irreparable damage to the high-voltage battery.

- Always observe the warning messages about the high-voltage battery and immediately consult a qualified specialist workshop.
- Have the necessary maintenance work on the high-voltage battery carried out at a qualified specialist workshop.

Notes on special service requirements

The prescribed service interval is based on normal operation of the vehicle. Maintenance work will need to be performed more often than specified if the vehicle is operated under arduous conditions or increased loads. This is the case for frequent operation in mountainous terrain or on poor road surfaces, for example.

In these or similar operating conditions, have the interior air filter changed more frequently. The tires must be checked more frequently if the vehicle is operated under increased loads. Further information can be obtained at a qualified specialist workshop.

The ASSYST PLUS service interval display is only an aid. The driver of the vehicle bears responsibility as regards to whether maintenance work needs to be performed more often than specified based on the actual operating conditions and/or loads.

Battery disconnection periods

The ASSYST PLUS service interval display can calculate the service due date only when the battery is connected.

Display and note down the service due date on the instrument display before disconnecting the battery (\rightarrow page 281).

Engine compartment

Opening and closing the hood

- WARNING Risk of accident due to driving with the hood unlocked
- The hood may open and block your view.
- Never release the hood when driving.
- Before every trip, ensure that the hood is locked.
- WARNING Risk of accident and injury when opening and closing the hood

The hood may suddenly drop into the end position.

There is a risk of injury for anyone in the hood's range of movement.

Do not open or close the hood if there is a person in the hood's range of movement. WARNING Risk of injury due to overheated vehicle

If you open the hood in the event of an overheated vehicle or fire in the engine compartment, the following situations may occur:

- You may come into contact with hot gases.
- You may come into contact with other escaping hot operating fluids.
- In the event of overheating or fire in the engine compartment, keep the hood closed and call the fire service.
- Allow the overheated vehicle to cool down first if you need to open the hood.
- WARNING Risk of injury due to moving parts

Components in the engine compartment may continue to run or start unexpectedly even when the drive system is switched off.

Observe the following if you must open the hood:

Switch off the vehicle.

- Never touch the danger zones surrounding moving components, e.g. the rotation area of the fan.
- Remove jewelery and watches.
- Keep items of clothing and hair away from moving parts.
- WARNING Risk of burns from hot components in the engine compartment

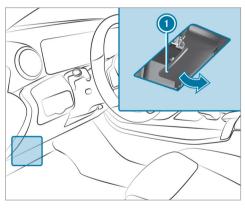

Certain components in the engine compartment can be very hot, e.g. the drive system and the cooler.

- Allow the drive system to cool down and touch only the components described below.
- **WARNING** Risk of injury from using the windshield wipers when the hood is open

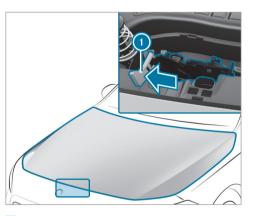

If the windshield wipers start moving when the hood is open, you could be trapped by the wiper linkage.

Always switch off the windshield wipers and the vehicle first if you need to open the hood.

Opening the hood

To release the hood, pull on handle ①.

Push yellow handle () on the hood catch to the left as far as it will go (palm downwards). Lift the hood until it is automatically raised by the pneumatic spring.

Closing the hood

Lower the hood and let it drop from a height of approximately 8 in (20 cm).

If the hood can still be lifted slightly, open the hood again and close it with a little force until it engages correctly.

Checking the coolant level

 WARNING Risk of scalding from hot coolant

If you open the cap when the drive system is at operating temperature, you may scald yourself.

- Allow the vehicle to cool before opening the cap.
- When opening the cap, wear protective gloves and protective eyewear.
- ► To release the pressure, slowly open the cap.
- Only have the coolant checked or refilled at a qualified specialist workshop.

Adding washer fluid to the windshield washer system

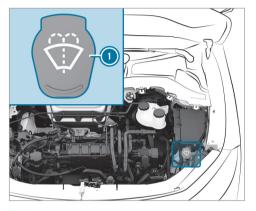

WARNING Risk of burns from hot components in the engine compartment

Certain components in the engine compartment can be very hot, e.g. the drive system and the cooler.

- Allow the drive system to cool down and touch only the components described below.
- WARNING Risk of fire and injury from windshield washer concentrate

Windshield washer concentrate is highly flammable.

Avoid fire, open flames, smoking and the creation of sparks when using windshield washer concentrate.

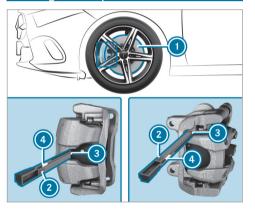

- Remove cap 🕦 by the tab.
- Add washer fluid.
- Further information about the windshield washer fluid (→ page 348)

Keeping the air-water duct free

 Keep the area between the hood and the windshield free of deposits, e.g. ice, snow and leaves.

Checking the brakepad thickness

- Bring the vehicle and wheels into a suitable position so that you can position the gauge.
- The positioning of gauge ③ depends on the vehicle equipment. The gauge is positioned at point ④, which is located either in the center of the brakepad or at the upper end to the side, depending on the brake caliper.
- Switch off the drive system.
- Secure the vehicle against rolling away.
- Take the gauge out of the vehicle document wallet in the glove box.
- Place the gauge between the wheel's spokes in position (3) on the brakepad.
- Hold the gauge vertically to the brake disc and slide measuring pin (2) onto brake disc (1).
- Check which color field (4) the arrow on measuring pin is pointing to.

Green: the brakepad thickness is sufficient.

Red: the brakepad thickness is not sufficient. Have the brakepads checked at a qualified specialist workshop.

- (i) To avoid an inaccurate measurement:
 - Make sure the wheels are suitably positioned.
 - In the case of perforated brake discs, do not put the measuring pin on one of the bores in the brake disc.

Cleaning and care

Notes on washing the vehicle in a car wash

 WARNING Risk of accident due to reduced braking effect after washing the vehicle

The braking effect is reduced after washing the vehicle.

 After the vehicle has been washed, brake carefully while paying attention to the traffic conditions until the braking effect has been fully restored.

NOTE Damage from automatic braking

If one of the following functions is switched on, the vehicle brakes automatically in certain situations:

- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damage to the vehicle, deactivate these systems in the following or similar situations:

- During towing
- In a car wash

NOTE Damage due to unsuitable car wash

Before driving into a car wash make sure that the car wash is suitable for the vehicle dimensions.

- Ensure there is sufficient ground clearance between the underbody and the guide rails of the car wash.
- Ensure that the clearance width of the car wash, in particular the width of the guide rails, is sufficient.

To avoid damage to your vehicle when using a car wash, ensure the following beforehand:

- Active Distance Assist DISTRONIC is deactivated.
- The HOLD function is switched off.
- The surround view camera or the rear view camera is switched off.
- The side windows and sliding sunroof are completely closed.
- The blower for the ventilation/heating is switched off.
- The windshield wiper switch is in position **0**.
- The SmartKey is at a minimum distance of 10 ft (3 m) away from the vehicle. Otherwise the tailgate could open unintentionally.

- In automatic car washes with conveyor systems:
 - Neutral **N** is engaged.
 - If you would like to leave the vehicle while it is being washed, make sure the Smart-Key is located in the vehicle. The park position P is otherwise automatically engaged.
- (i) If, after the car wash, you remove the wax from the windshield and wiper rubbers, this will prevent smearing and reduce wiper noise.

Automatic car wash mode

In car wash mode, the vehicle is prepared for driving into the automatic car wash. Car wash mode can be activated at a speed of up to 12 mph (20 km/h) (\rightarrow page 287).

The following settings are made when car wash mode is activated:

- The outside mirrors are folded in.
- To prevent the windshield washer system from starting up automatically, the rain sensor is deactivated.
- The rear window wiper is deactivated.

- The air conditioning system is set to air-recirculation mode.
- Parking Assist PARKTRONIC is deactivated.
- Vehicles with surround view camera: the front image is activated after approx. eight seconds.

If one of the settings cannot be selected, this is displayed by a **X** behind the respective setting.

Above a speed of 12 mph (20 km/h) car wash mode is automatically deactivated.

The following settings are reset when car wash mode is deactivated:

- The outside mirrors are folded out.
- The rain sensor is activated.
- The rear window wiper is activated.
- The air conditioning system is set to fresh air mode.
- Parking Assist PARKTRONIC is reset to the previously selected setting.
- Vehicles with surround view camera: the front image is deactivated at speeds above 11 mph (18 km/h).

Activating/deactivating automatic car wash mode

Requirements:

- The vehicle is stationary.
- The engine is running.

Multimedia system:

⊶ 🖳 🕨 Settings 🕨 Quick Access

Activating automatic car wash mode

- Select Automatic Car Wash Mode.
- Select Start.

If one of the settings cannot be selected, this is displayed by a **X** behind the respective setting.

 For an overview of the settings made when activating automatic car wash mode (→ page 285).

Deactivating automatic car wash mode

- Select Stop.
 - The automatic car wash settings are reset.

 The automatic car wash mode is automatically deactivated as soon as a speed of 12 mph (20 km/h) is exceeded.

Notes on using a power washer

WARNING Risk of an accident when using power washers with round-spray nozzles

The water jet can cause externally invisible damage.

Components damaged in this way may unexpectedly fail.

- Do not use a power washer with roundspray nozzles.
- Have damaged tires or chassis parts replaced immediately.

To avoid damage to your vehicle, observe the following when using a power washer:

• The SmartKey is at a minimum distance of 10 ft (3 m) away from the vehicle. Otherwise, the tailgate could open unintentionally.

288 Maintenance and care

- Maintain a distance of at least 11.8 in (30 cm) to the vehicle.
- Vehicles with decorative foil: Parts of your vehicle are covered with a decorative foil. Maintain a distance of at least 27.6 in (70 cm) between the foil-covered parts of the vehicle and the nozzle of the power washer. Move the power washer nozzle around whilst cleaning. The water temperature of the power washer must not exceed 140°F (60°C).
- Observe the information on the correct distance in the equipment manufacturer's operating instructions.
- Do not direct the nozzle of the power washer directly at sensitive parts, such as tires, gaps, electrical components, batteries, light sources and ventilation slits.

Washing the vehicle by hand

Observe the legal requirements, e.g. in a number of countries, washing by hand is only permitted in specially designated wash bays.

Use a mild cleaning agent, e.g. car shampoo.

- Wash the vehicle with lukewarm water using a soft car sponge. When doing so, do not expose the vehicle to direct sunlight.
- Carefully hose the vehicle off with water and dry using a chamois.
- (i) Observe the notes on the care of vehicle parts (→ page 289).

Notes on paintwork/matte finish paintwork care

To avoid damaging the paintwork and interfering with the driving assistance systems, please observe the following notes:

Paint

- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.
- Tree resin, oils, fuels and greases: remove by rubbing gently with a cloth soaked in petroleum ether or lighter fluid.
- Coolant and brake fluid: remove with a damp cloth and clean water.

- Tar stains: use tar remover.
- Wax: use silicone remover.
- Do not attach stickers, films or similar materials. Only have film attached to the bumper at a qualified specialist workshop.
- Remove dirt immediately, where possible.

Matte finish

- Only use care products approved for Mercedes-Benz.
- Do not attach stickers, films or similar materials. Only have film attached to the bumper at a qualified specialist workshop.
- Do not polish the vehicle and alloy wheels.
- Only use car washes that correspond to the latest engineering standards.
- Do not use car wash program with a final hot wax treatment.
- Do not use paint cleaners, buffing or polishing products, gloss preservers, e.g. wax.
- In the event of paintwork damage:
- Always have paintwork repairs carried out at a qualified specialist workshop.

 Make sure the radar sensors function (→ page 180).

Notes on cleaning decorative foils

Observe the notes on matte finish care in the chapter "Notes on paintwork/matte finish paintwork care" (\rightarrow page 288). They also apply to matte decorative foils.

Observe the notes on cleaning decorative foils to avoid vehicle damage.

Cleaning

- For cleaning, use plenty of water and a mild cleaning agent without additives or abrasive substances, e.g. a car shampoo approved for Mercedes-Benz.
- Remove dirt immediately, where possible, whilst avoiding rubbing too hard. There is otherwise a risk of damaging the decorative foil irreparably.
- If there is dirt on the finish or if the decorative foil is dull: Use the Paint Cleaner recommended and approved for Mercedes-Benz.

- Insect remains: Soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: Soak with water and rinse off afterwards.
- To prevent water stains, dry a foil-wrapped vehicle with a soft, absorbent cloth after every car wash.

Avoiding damage to the decorative foil

- The service life and color of decorative foils are impaired by:
 - Sunlight
 - Temperature, e.g. hot air blower
 - Weather conditions
 - Stone chippings and dirt
 - Chemical cleaning agents
 - Oily products
- Do not use polish on matte decorative foil. Polishing will have the effect of shining the foil-wrapped surface.
- Do not treat matte or structured decorative foils with wax. Permanent stains may occur.

Scratches, corrosive deposits, areas affected by corrosion and damage caused by incorrect care cannot always be completely repaired. In such cases, visit a qualified specialist workshop.

You can obtain more information on care and cleaning products from the manufacturer.

In the case of foil-wrapped surfaces, optical differences may occur between the surfaces that were not protected by a decorative foil after removing a decorative foil.

 Have work or repairs to decorative foils carried out at a qualified specialist workshop, e.g. in an authorized Mercedes-Benz Center.

Notes on care of vehicle parts

 WARNING Risk of entrapment if the windshield wipers are switched on while the windshield is being cleaned

If the windshield wipers are set in motion while you are cleaning the windshield or wiper blades, you can be trapped by the wiper arm.

290 Maintenance and care

Always switch off the windshield wipers and the drive system before cleaning the windshield or wiper blades.

To avoid damage to the vehicle, observe the notes on cleaning and care of the following vehicle parts:

Wheels and rims

- Use water and acid-free alloy wheel cleaners.
- Do not use acidic alloy wheel cleaners to remove brake dust. This could damage wheel bolts and brake components.
- To avoid corrosion of the brake discs and brakepads, drive the vehicle for a few minutes after cleaning before parking it. The brake discs and brakepads warm up and dry out.

Windows

- Clean the windows inside and outside with a damp cloth and with a cleaning agent recommended for Mercedes-Benz.
- Do not use dry cloths or abrasive or solventbased cleaning agents to clean the inside of windows.

- i) After changing the wiper blades or treating the vehicle with wax, clean the windshield thoroughly with cleaning agents recommended for Mercedes-Benz. Failure to observe the application instructions may result in damage, smear marks or blinding spots.
- Remove external fogging or dirt on the windshield in front of the multifunction camera. Otherwise, driving systems and driving safety systems may be impaired or not available (→ page 180).

Wiper blades

- Move the wiper arms into the replacement position (→ page 131).
- With the wiper arms folded out, clean the wiper blades with a damp cloth.
- (i) Make sure that the wiper blades are coated. The coating can leave residues on a cloth. Do not rub the wiper blades excessively or clean them too often.

Exterior lighting

• Clean the lenses with a wet sponge and mild cleaning agent, e.g. car shampoo.

• Only use cleaning agents or cleaning cloths that are suitable for plastic lenses.

Vehicle socket (high-voltage battery)

- Use clean water and a soft cloth to clean the vehicle socket.
- Do not use power washers or cleaning agents, such as soap.

Sensors

- Clean the sensors in the front and rear bumpers with a soft cloth and car shampoo (→ page 180).
- When using a power washer, maintain a minimum distance of 11.8 in (30 cm).

Rear view camera and surround view camera

- Open the camera cover with the multimedia system (→ page 218).
- Use clean water and a soft cloth to clean the camera lens.
- Do not use a power washer.

Notes on care of the interior

▲ WARNING Risk of injury from plastic parts breaking off after the use of solvent-based care products

Care and cleaning products containing solvents can cause surfaces in the cockpit to become porous. When the airbags are deployed, plastic parts may break away.

- Do not use any care or cleaning products containing solvents to clean the cockpit.
- WARNING Risk of injury or fatal injuries from bleached seat belts

Bleaching or dyeing seat belts can severely weaken them.

This can, for example, cause seat belts to tear or fail in an accident.

▶ Never bleach or dye seat belts.

To avoid damage to the vehicle, observe the following notes on cleaning and care:

Seat belts

- Clean with lukewarm and soapy water.
- Do not use chemical cleaning agents.
- Do not dry by heating them to over 176°F (80°C) or exposing them to direct sunlight.

Display

- Switch off the display and let it cool down.
- Clean the surface carefully with a microfiber cloth and a suitable display care product (TFT-LCD).
- Do not use any other agents.

Head-up Display

- Clean with a soft, non-static, lint-free cloth.
- Do not use cleaning agents.

Plastic trim

- Clean with a damp microfiber cloth.
- For heavy soiling: Use a cleaner recommended for Mercedes-Benz.
- Do not attach stickers, films or similar materials.

• Do not allow cosmetics, insect repellent or sun cream to come in contact with the plastic trim.

Real wood and trim elements

- Clean with a microfiber cloth.
- Black piano-lacquer look: Clean with a damp cloth and soapy water.
- For heavy soiling: Use a cleaner recommended for Mercedes-Benz.
- Do not use solvent-based cleaning agents, polishes or waxes.

Headliner

• Clean with a brush or dry shampoo.

Carpet

• Use a carpet and textile cleaning agent recommended for Mercedes-Benz.

Steering wheel made of genuine leather or DINA-MICA

- **NOTE** Damage caused by wrong cleaners
- Do not use solvent-based cleaning agents such as tar remover or wheel

292 Maintenance and care

cleaner; neither should you use polishes or waxes. Otherwise you may damage the finish.

- Clean with a damp cloth and 1% soapy water solution and then wipe with a dry cloth.
- For heavy soiling: Use a cleaner recommended for Mercedes-Benz.
- Leather care: Use a leather care agent that has been recommended for Mercedes-Benz.
- Do not allow the leather to become too damp.
- Do not use a microfiber cloth.
- (i) Leather is a natural product. It has natural surface properties, such as differences in structure, marks caused by growth and injury or subtle color differences. These surface properties are characteristics of leather and not material faults. What's more, leather is subject to a natural aging process during which the surface properties change.

Genuine leather seat covers

• Clean with a damp cloth and then wipe with a dry cloth.

- Leather care: Use a leather care agent that has been recommended for Mercedes-Benz.
- Do not allow the leather to become too damp.
- Do not use a microfiber cloth.
- (i) Regular cleaning and care of the leather reduces soiling, wear marks and aging damage and thus significantly extends its life span. Clothing that can leave stains, e.g. jeans, can leave discoloration on the leather.

DINAMICA seat covers

- Clean with a damp cloth.
- Do not use a microfiber cloth.

Imitation leather seat covers

- Clean with a damp cloth and 1% soapy water.
- Do not use a microfiber cloth.

Fabric seat covers

• Clean with a damp microfiber cloth and 1% soapy water and allow to dry.

Emergency

Removing the safety vest

The safety vests are located in the storage compartments in the driver's and front passenger door.

- Pull out the safety vest bag by the loop.
- Open the safety vest bag and pull out the safety vest.
- (i) There are also safety vest compartments in the rear door storage compartments in which safety vests can be stored.

On the second second

- Do not tumble dry
- O not dry clean
- Class 2 safety vest

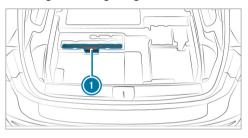

The requirements defined by the legal standard are only fulfilled if the safety vest is the correct size and is fully closed.

Replace the safety vest in the following cases:

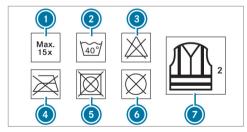

- The reflective strips are damaged or dirty
- The maximum permissible number of washes is exceeded
- The fluorescence has faded

Warning triangle

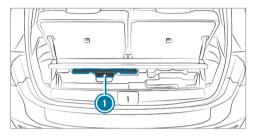

Removing the warning triangle

Vehicles with two rows of seats

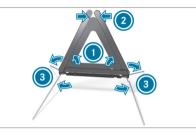

Maximum number of washes
 Maximum wash temperature

Vehicles with three rows of seats

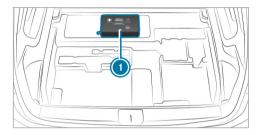

- > Open the cargo compartment floor.
- Remove warning triangle ①.

Setting up the warning triangle

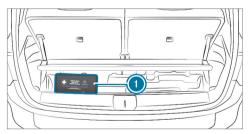

- Fold side reflectors ① upwards to form a triangle and attach at the top using upper pressstud ②.
- Fold legs (3) down and out to the side.

First-aid kit (soft-sided) overview

Vehicles with two rows of seats

Vehicles with three rows of seats

First-aid kit (soft sided) ① is under the cargo compartment floor.

Flat tire

Notes on flat tires

WARNING Risk of accident due to a flat tire

A flat tire severely affects the driving characteristics as well as the steering and braking of the vehicle.

Tires without run-flat characteristics:

- Do not drive with a flat tire.
- Change the flat tire immediately with an emergency spare wheel or spare wheel. Alternatively, consult a qualified specialist workshop.

Tires with run-flat characteristics:

 Observe the information and warning notes on MOExtended tires (run-flat tires). In the event of a flat tire, the following options are available depending on your vehicle's equipment:

- Vehicles with MOExtended tires: it is possible to continue the journey for a short period of time. Make sure you observe the notes on MOExtended tires (run-flat tires) (→ page 295).
- Vehicles with a TIREFIT kit: you can repair the tire so that it is possible to continue the journey for a short period of time. To do this, use the TIREFIT kit (→ page 297).
- Vehicles with Mercedes me connect: you can make a call for breakdown assistance via the overhead control panel in the case of a breakdown (→ page 263).
- All vehicles: change the wheel (\rightarrow page 337).
- (i) The emergency spare wheel is only available in certain countries.

Notes on MOExtended tires (run-flat tires)

WARNING Risk of accident when driving in limp-home mode

When driving in emergency mode the handling characteristics are impaired.

- Do not exceed the specified maximum speed of the MOExtended tires.
- Avoid any abrupt steering and driving maneuvers as well as driving over obstacles (curbs, pot holes, off-road). This applies, in particular, to a loaded vehicle.
- Stop driving in the emergency mode if you notice:
- Banging noise
- Vehicle vibration
- Smoke which smells like rubber
- Continuous ESP® intervention
- · Cracks in the tire side walls
- After driving in emergency mode, have the rims checked by a qualified specialist

workshop with regard to their further use.

The defective tire must be replaced in every case.

With MOExtended tires (run-flat tires), you can continue to drive your vehicle even if there is a total loss of pressure in one or more tires. However, the tire affected must not show any clearly visible damage.

You can recognize MOExtended tires by the MOExtended marking which appears on the side wall of the tire.

Vehicles with tire pressure monitoring system:

MOExtended tires may only be used in conjunction with an activated tire pressure monitoring system.

If a pressure loss warning message appears in the driver's display, proceed as follows:

- Check the tire for damage.
- If driving on, observe the following notes.

Driving distance possible in emergency mode after the pressure loss warning:

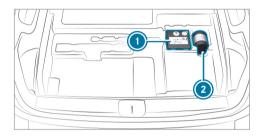

Load condition	Driving distance possi- ble in emergency mode
Partially laden	50 miles (80 km)
Fully laden	19 miles (30 km)

The driving distance possible in emergency mode may vary depending on the driving style. Observe the maximum permissible speed of 50 mph (80 km/h).

If a tire has gone flat and cannot be replaced with an MOExtended tire, you can use a standard tire as a temporary measure.

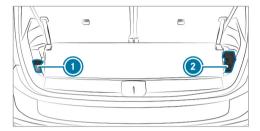

TIREFIT kit storage location

The TIREFIT kit is located under the trunk floor.

Vehicles with two rows of seats

- Tire inflation compressor
- 2 Tire sealant bottle

Vehicles with three rows of seats

- Tire sealant bottle
- 2 Tire inflation compressor

Depending on the model, the TIREFIT kit may also be located in other places under the trunk floor.

Using the TIREFIT kit

Required tools:

- Tire sealant bottle
- TIREFIT sticker
- Sticker with details of the maximum permissible speed

- Tire inflation compressor
- Gloves

TIREFIT kit storage location: (\rightarrow page 296)

You can use TIREFIT tire sealant to seal perforation damage of up to 0.16 in (4 mm), particularly those in the tire contact surface. You can use TIREFIT in outside temperatures down to $-4^{\circ}F$ (-20°C).

WARNING Risk of accident when using tire sealant

The tire sealant may be unable to seal the tire properly, especially in the following cases:

- There are large cuts or punctures in the tire (larger than damage previously mentioned)
- The wheel rims have been damaged
- After journeys with very low tire pressure or with flat tires
- Do not continue driving.
- Consult a qualified specialist workshop.

WARNING Risk of injury and poisoning from tire sealant

The tire sealant is harmful and causes irritation. Do not allow it to come into contact with the skin, eyes or clothing, and do not swallow it. Do not inhale tire sealant fumes. Keep the tire sealant away from children.

If you come into contact with the tire sealant, observe the following:

- Rinse off the tire sealant from your skin immediately using water.
- If tire sealant gets into your eyes, thoroughly rinse out the eyes using clean water.
- If tire sealant has been swallowed, immediately rinse out the mouth thoroughly and drink plenty of water. Do not induce vomiting and seek medical attention immediately.
- Change out of any clothes contaminated with tire sealant immediately.
- If allergic reactions occur, seek medical attention immediately.

- **NOTE** Overheating due to the tire inflation compressor running too long
- Do not run the tire inflation compressor for longer than ten minutes without interruption.

Comply with the manufacturer's safety notes on the sticker on the tire sealant bottle.

Have the tire sealant bottle replaced in a qualified specialist workshop every five years.

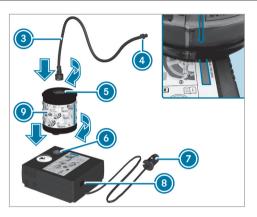

Do not remove any foreign objects which have entered the tire.

Remove sticker
 from the tire inflation compressor housing and affix it to the instrument cluster within the driver's field of vision.

Remove sticker (2) from the tire sealant bottle and affix it near the valve on the wheel with the faulty tire.

- Pull plug (2) with the cable and filler hose (3) out of the tire inflation compressor housing.
- Insert tire sealant bottle () in socket () of the tire inflation compressor in such a way that the red arrow on tire sealant bottle () matches the red arrow on the tire inflation compressor.

- Turn tire sealant bottle 💿 a quarter turn clockwise.
- Insert the plug of filler hose (3) in socket (5) of tire sealant bottle (9).
- Turn filler hose ③ a quarter turn clockwise.

- Remove the valve cap from valve on the faulty tire.
- Screw union nut (4) of filler hose (3) onto valve (10).
- Insert plug (2) into a 12 V socket in your vehicle.
- Turn the key to position 1 in the ignition lock.

Press on and off switch (1) on the tire inflation compressor.

The tire inflation compressor is switched on. The tire is inflated. First, tire sealant is pumped into the tire. The pressure may briefly rise to approximately 500 kPa (5 bar/73 psi).

Do not switch off the tire inflation compressor during this phase!

• Let the tire inflation compressor run for a maximum of ten minutes.

The tire should then have attained a tire pressure of at least 200 kPa (2.0 bar/29 psi).

If tire sealant leaks out, make sure you clean the affected area as quickly as possible. It is preferable to use clean water.

If you get tire sealant on your clothing, have it cleaned as soon as possible with perchloroethy-lene.

If, after ten minutes, a tire pressure of 200 kPa (2.0 bar/29 psi) has not been attained:

Switch off the tire inflation compressor.

Unscrew the filling hose from the valve of the faulty tire.

Please note that tire sealant may leak out when unscrewing the filling hose.

- Drive forwards or in reverse very slowly for approximately 33 ft (10 m).
- Pump up the tire again.
 After a maximum of ten minutes the tire pressure must be at least 200 kPa (2.0 bar/29 psi).
- **WARNING** Risk of accident due to the specified tire pressure not being achieved

If the specified tire pressure is not achieved after the specified time, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance.

The braking characteristics as well as the driving characteristics may be greatly impaired.

- Do not continue driving.
- Consult a qualified specialist workshop.

NOTE Staining caused by leaking tire sealant

After use, excess tire sealant may leak out from the filling hose.

Therefore, place the filling hose in the plastic bag that contained the TIREFIT kit.

If, after ten minutes, a tire pressure of 200 kPa (2.0 bar/29 psi) has been attained:

- Switch off the tire inflation compressor.
- Unscrew the filling hose from the valve of the faulty tire.

Please note that tire sealant may leak out when unscrewing the filling hose.

WARNING Risk of accident from driving with sealed tires

A tire temporarily sealed with tire sealant impairs the handling characteristics and is not suitable for higher speeds.

- Adapt your driving style accordingly and drive carefully.
- Do not exceed the maximum speed limit with a tire that has been repaired using tire sealant.
- Observe the maximum permissible speed for a tire sealed with tire sealant 50 mph (80 km/h).
- The sticker with details of the maximum permissible speed must be affixed to the instrument cluster where it can be easily seen by the driver.

NOTE Staining caused by leaking tire sealant

After use, excess tire sealant may leak out from the filling hose.

Therefore, place the filling hose in the plastic bag that contained the TIREFIT kit.

ENVIRONMENTAL NOTE Environmental Ó pollution caused by environmentally irresponsible disposal

Tire sealant contains pollutants.

- Have the tire sealant bottle disposed of professionally, e.g. at an authorized Mercedes-Benz Center.
- Store the tire sealant bottle and the tire inflation compressor.
- Pull away immediately.
- Stop driving after approximately ten minutes and check the tire pressure using the tire inflation compressor.

The tire pressure must now be at least 130 kPa (1.3 bar/19 psi).

WARNING Risk of accident due to the specified tire pressure not being attained

If the specified tire pressure is not reached, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance.

The braking and driving characteristics may be greatly impaired.

- Do not continue driving.
- Consult a qualified specialist workshop.

In cases such as the one mentioned above, contact an authorized Mercedes-Benz Center. Or call 1-800-FOR-MERCedes (in the USA) or 1-800-387-0100 (in Canada).

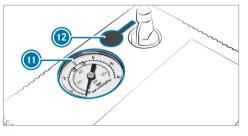

Correct the tire pressure if it is still at least 130 kPa (1.3 bar/19 psi). See the Tire and Loading Information placard on the B-pillar on the driver's side or the tire pressure table in the fuel filler flap for values.

Increasing the tire pressure

Switch on the tire inflation compressor.

Decreasing the tire pressure

- Remove the tire sealant bottle from the tire inflation compressor.
- Insert the filler hose in the socket of the tire inflation compressor and turn it a quarter turn clockwise.

Press pressure release button @ next to manometer ①.

When the tire pressure is correct

- Unscrew the filling hose from the valve of the sealed tire.
- Screw the valve cap onto the valve of the sealed tire.
- Store the tire sealant bottle and the tire inflation compressor.
- Drive to the nearest qualified specialist workshop and have the tire, tire sealant bottle and filling hose replaced there.

Battery (vehicle)

Notes on the 12 V battery

 WARNING Risk of explosion due to electrostatic charge

Electrostatic charge can ignite the highly explosive gas mixture in the battery.

To discharge any electrostatic charge that may have built up, touch the metal vehicle body before handling the battery.

The highly flammable gas mixture is created while the battery is charging and during starting assistance.

WARNING Danger of chemical burns from the battery acid

Battery acid is caustic.

- Avoid contact with the skin, eyes or clothing.
- Do not lean over the battery.
- Do not inhale battery gases.

- Keep children away from the battery.
- Immediately rinse battery acid off thoroughly with plenty of clean water and seek medical attention immediately.

ENVIRONMENTAL NOTE Environmental damage due to improper disposal of batteries

L-**O** Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries. If you have to disconnect the 12 V battery, contact a qualified specialist workshop.

Comply with safety notes and take protective measures when handling batteries.

Fire, open flames and smoking are prohibited when handling the battery. Avoid creating sparks.

Electrolyte or battery acid is corrosive. Avoid contact with the skin, eyes or clothing. Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse electrolyte or acid splashes off with clean water. Consult a doctor if necessary.

Wear safety glasses.

Observe this Operator's Manual.

If you do not want to use the vehicle for a long period of time, consult a qualified specialist work-shop.

Notes on the high-voltage battery

▲ DANGER Risk of explosion from excessive internal pressure of the high-voltage battery

Flammable gas may escape and ignite in the event of a vehicle fire.

Stop the charging process immediately in case of unusual odors, smoke or burn marks.

- Leave the danger zone immediately. Secure the danger zone at a sufficient distance.
- Call the fire brigade.

Observe the notes on charging the high-voltage battery (\rightarrow page 158).

Risk of explosion.

Fire, open flames and smoking are prohibited when handling the battery. Avoid creating sparks.

Electrolyte or battery acid is corrosive. Avoid contact with the skin, eves or clothing. Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse electrolyte or acid splashes off with clean water. Consult a doctor if necessary.

Observe this Operator's Manual.

Notes on starting assistance and charging the 12 V battery

Wear safety glasses.

Keep children away.

All vehicles

When charging the battery and during starting assistance, always use the jump-start connection point in the engine compartment.

NOTE Damage to the battery from overvoltage

When charging using a battery charger without a maximum charging voltage, the battery or the on-board electronics may be damaged.

- Only use battery chargers with a maximum charging voltage of 14.8 V.
- **WARNING** Risk of explosion due to igniting hydrogen gas

If there is a short circuit or sparks start to form when charging a battery, there is a danger of the hydrogen gas igniting.

- Take care that the positive terminal of a connected battery does not come into contact with vehicle parts.
- Never place metal objects or tools on a battery.
- When connecting and disconnecting the battery, always observe the sequence of battery terminals described.

- Always take care to connect only battery terminals of identical polarity when jump starting a vehicle.
- During starting assistance, it is essential to observe the sequence described for connecting and disconnecting the jumper cables.
- Do not connect or disconnect the battery terminals while the engine is running.
- WARNING Risk of explosion due to a mixture of explosive gases

A mixture of explosive gases can escape from the battery during charging and jump starting.

- Fire, open flames, smoking and creating sparks must be avoided.
- Make sure that there is sufficient ventilation.
- Do not stand over the battery.

 WARNING Risk of explosion from a frozen battery

A discharged battery may freeze at temperatures slightly above or below freezing point.

During starting assistance or battery charging, battery gas can be released.

Always allow a battery to thaw before charging it or performing starting assistance.

If the indicator/warning lamps in the instrument cluster do not light up at low temperatures, it is very likely that the discharged battery has frozen. In this case you may neither jump-start the vehicle nor charge the battery.

The service life of a battery that has been thawed may be dramatically shortened. The starting characteristics may be impaired, especially at low temperatures.

It is recommended that you have a thawed battery checked at a qualified specialist workshop.

All vehicles

! NOTE Damage caused by numerous or extended attempts to start the engine

Numerous or extended attempts to start the engine may damage the catalytic converter due to non-combusted fuel.

Avoid numerous and extended attempts to start the engine.

Observe the following points during starting assistance and when charging the battery:

- Only use undamaged jumper cables/charging cables with a sufficient cross-section and insulated terminal clamps.
- Non-insulated parts of the terminal clamps must not come into contact with other metal parts while the jumper cable/charging cable is connected to the battery/jump-start connection point.
- The jumper cable/charging cable must not come into contact with any parts which may move when the engine is running.

- Always make sure that neither you nor the battery is electrostatically charged.
- Keep away from fire and open flames.
- Do not lean over the battery.

Observe the additional following points when charging the battery:

- Only use battery chargers tested and approved for Mercedes-Benz.
- Read the battery charger's operating instructions before charging the battery.

Observe the additional following points during starting assistance:

- Starting assistance may only be provided using vehicles, batteries or other jump start devices with a nominal voltage of 12 V.
- The vehicles must not touch.

Starting assistance and charging the 12 V battery

 Only have starting assistance provided by a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center. Only have the battery charged at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

Replacing the 12 V battery

 Only have the battery replaced at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

Tow starting or towing away

Overview of the permitted towing methods

! NOTE Damage from automatic braking

If one of the following functions is switched on, the vehicle brakes automatically in certain situations:

- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damage to the vehicle, deactivate these systems in the following or similar situations:

- During towing
- In a car wash

Mercedes-Benz recommends transporting your vehicle in the case of a breakdown, rather than towing it away.

For towing, use a tow rope or tow bar with both axles on the ground. Do not use tow bar systems.

If you notice that the vehicle has lost coolant, do not have it towed away. Have the vehicle transported instead.

- ! NOTE Damage to the vehicle due to towing away incorrectly
- Observe the instructions and notes on towing away.

Vehicles with front wheel drive Permitted towing methods	
Front axle raised	Yes, maximum 30 miles (50 km)* at 30 mph (50 km/h)
Rear axle raised	No

*The towing range can be significantly lower depending on the active auxiliary consumers and environmental conditions.

4MATIC vehicles

Permitted towing methods

Both axles on the ground	Yes, maximum 30 miles (50 km) at 30 mph (50 km/h)*, only forwards with the driver in the cockpit.
Front axle raised	No
Rear axle raised	No

*The towing range can be significantly lower depending on the active auxiliary consumers and environmental conditions.

Towing the vehicle with both axles on the ground

- Observe the notes on the permitted towing methods (\rightarrow page 305).
- Make sure that the 12 V battery is connected and charged.

Observe the following points when the 12 V battery is disconnected or discharged:

- The drive system cannot be started
- The electric parking brake cannot be released or applied
- The transmission cannot be shifted to position **N** or **P**

In the following situations, only transporting the vehicle is permitted:

- If the transmission cannot be shifted to $\fbox{\sc n}$
- If the 12 V battery is disconnected or discharged
- If the display in the instrument cluster is not working
- If the Towing Not Permitted See Operator's Manual message is displayed
- If the Check Coolant Level See Operator's Manual message is displayed
- If the Stop Switch Off Vehicle message is displayed

- In such cases, transport the vehicle $(\rightarrow page 308)$.
- I NOTE Damage due to towing away at excessively high speeds or over long distances

The drivetrain could be damaged when towing at excessively high speeds or over long distances.

- A towing speed of 30 mph (50 km/h) must not be exceeded.
- A towing distance of 30 miles (50 km) must not be exceeded.
- **WARNING** Risk of accident when towing a vehicle which is too heavy

If the vehicle to be tow-started or towed away is heavier than the permissible gross mass of your vehicle, the following situations can occur:

• The towing eye may become detached.

- The vehicle/trailer combination may swerve or rollover.
- Before tow-starting or towing away, check if the vehicle to be tow-started or towed away exceeds the permissible gross mass.

If a vehicle must be tow-started or towed away, its permissible gross mass must not exceed the permissible gross mass of the towing vehicle.

Information on the permissible gross mass of the vehicle can be found on the vehicle identification plate (\rightarrow page 345).

Towing away the vehicle

- linstall the towing eye (\rightarrow page 309).
- Fasten the towing device.
- I NOTE Damage due to incorrect connection of the tow bar
- Only connect the tow rope or tow bar to the towing eyes.

- Deactivate the automatic locking mechanism $(\rightarrow \text{ page 74}).$
- Do not activate the HOLD function.
- ▶ Deactivate the tow-away alarm (\rightarrow page 89).
- Deactivate Active Brake Assist (\rightarrow page 204).
- Shift the transmission to position **N**.
- Release the electric parking brake.
- Remain in the cockpit during towing and observe the display messages.
- Do not switch off the vehicle while it is being towed.
- Do not open the driver's door or front passenger door; the transmission will otherwise automatically shift to P.
- WARNING Risk of accident due to limited safety-related functions during the towing process

Safety-related functions are limited or no longer available in the following situations:

• The vehicle is switched off.

- The brake system or power steering system is malfunctioning.
- The energy supply or the on-board electrical system is malfunctioning.
- In such cases, do not tow the vehicle.
- Transport the vehicle (\rightarrow page 308).
- **NOTE** Damage to the drive system due to incorrect towing

The vehicle may not be towed in the following situations:

- The vehicle is switched off.
- The brake system or power steering system is malfunctioning.
- The energy supply or the on-board electrical system is malfunctioning.
- ▶ In such cases, do not tow the vehicle.

NOTE Damage due to excessive tractive power

If you pull away sharply, the tractive power may be too high and the vehicles could be damaged.

Pull away slowly and smoothly.

Loading the vehicle for transport

- Observe the notes on towing away $(\rightarrow page 305)$.
- Connect the towing device to the towing eye in order to load the vehicle.
- Shift the transmission to position **N**.
- (i) The transmission may be locked in position
 P in the event of damage to the electrics. To shift to N, provide the on-board electrical system with power (→ page 305).
- Load the vehicle onto the transporter.
- Shift the transmission to position P.

- Use the electric parking brake to secure the vehicle against rolling away.
- Only secure the vehicle by the wheels.

Vehicles with adaptive damping adjustment

 WARNING Risk of an accident when transporting vehicles with adaptive damping adjustment

When transporting vehicles with adaptive damping adjustment, the vehicle/trailer combination may begin to rock and start to skid.

- Load the vehicle correctly onto the transporter.
- Secure the vehicle on all four wheels with suitable tensioning straps.
- Do not exceed the maximum permissible speed of 35 mph (60 km/h) when transporting.

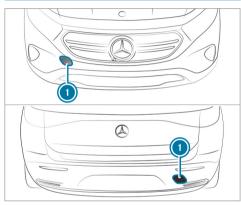

- **NOTE** Damage to the vehicle from securing it incorrectly
- After loading, the vehicle must be secured on all four wheels. Otherwise, the vehicle could be damaged.
- A minimum distance of 8 in (20 cm) upwards and 4 in (10 cm) downwards must be kept to the transport platform.
- Secure the vehicle on all four wheels after loading.

- **!** NOTE Damage to the drive train due to incorrect positioning of the vehicle
- Do not position the vehicle above the connection point of the transport vehicle.

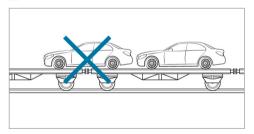

Towing eye storage location

Towing eye is under the cargo compartment floor.

Installing and removing the towing eye

- Press the mark on cover ① inwards and remove.
- Screw in the towing eye clockwise as far as it will go and tighten.
- Make sure that cover ① engages in the bumper when you remove the towing eye.

Make sure that the front and rear axles come to rest on the same transportation vehicle.

NOTE Damage to the vehicle due to incorrect use of the towing eye or trailer hitch

When a towing eye or trailer hitch is used to recover a vehicle, the vehicle may be damaged in the process.

- Only use the towing eye or trailer hitch to tow away or tow start the vehicle.
- Do not use the towing eye or trailer hitch to tow the vehicle during recovery.

Tow-starting the vehicle

- If the drive system does not start, have the vehicle transported to a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.
- The drive system cannot be started by towstarting the vehicle. Do not perform any attempts to tow-start the vehicle.

Electrical fuses

Notes on electrical fuses

WARNING Risk of accident and injury due to overloaded lines

If you manipulate or bridge a faulty fuse or if you replace it with a fuse with a higher amperage, the electric line could be overloaded.

This could result in a fire.

 Always replace faulty fuses with specified new fuses containing the correct amperage.

! NOTE Damage due to incorrect fuses

Electrical components or systems may be damaged by incorrect fuses, or their functionality may be significantly impaired.

Only use fuses that have been approved by Mercedes-Benz and which have the correct fuse rating.

Blown fuses must be replaced with fuses of the same rating, which you can recognize by the color

and the label. The fuse ratings and further information to be observed can be found in the fuse assignment diagram.

Fuse assignment diagram: on the fuse box in the engine compartment (\rightarrow page 311).

! NOTE Damage or malfunctions caused by moisture

Moisture may cause damage to the electrical system or cause it to malfunction.

- When the fuse box is open, make sure that no moisture can enter the fuse box.
- When closing the fuse box, make sure that the seal of the lid is positioned correctly on the fuse box.

If the newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop.

Ensure the following before replacing a fuse:

- The vehicle is secured against rolling away.
- All electrical consumers are switched off.
- The vehicle is switched off.

The electrical fuses are located in various fuse boxes:

- Fuse box in the engine compartment on the left-hand side of the vehicle, when viewed in the direction of travel (→ page 311)
- Fuse box in the front passenger footwell (→ page 312)
- Fuse box in the center of the cargo compartment (→ page 313)

Opening and closing the fuse box in the engine compartment

Requirements:

• A dry cloth and a screwdriver are available.

Observe the notes on electrical fuses (\rightarrow page 310).

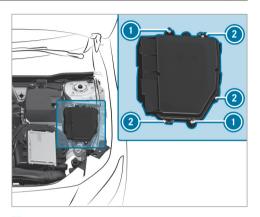

Opening

WARNING Risk of injury from using the windshield wipers when the hood is open

If the windshield wipers start moving when the hood is open, you could be trapped by the wiper linkage.

Always switch off the windshield wipers and vehicle before opening the hood.

Open the hood.

- Remove any existing moisture from the fuse box using a dry cloth.
- Loosen screws ①.
- Press clamps ② and lift the fuse box lid up and out.

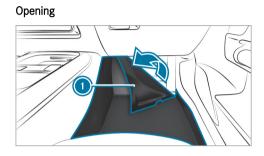

The fuse assignment diagram is in a recess on the side of the fuse box.

Closing

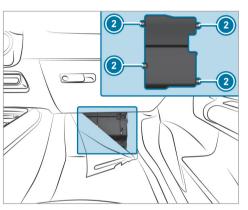

- Check whether the seal is positioned correctly in the lid.
- Place the lid on the fuse box.
- Make sure that clamps ② engage.
- Tighten screws ①.
- Close the hood.

Opening and closing the fuse box in the front passenger footwell

Observe the notes on electrical fuses (\rightarrow page 310).

▶ Lift carpet ① in the direction of the arrow.

Loosen screws ② and remove the fuse box lid from the top.

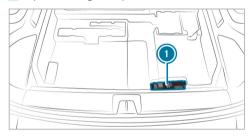

Closing

- Place the lid on the fuse box.
- Tighten screws 2.
- Fold back the carpet.

Opening and closing the fuse box in the cargo compartment

Observe the notes on electrical fuses (\rightarrow page 310).

> Open the cargo compartment floor.

Fuse box () is located underneath the cargo compartment floor.

Notes on noise or unusual handling characteristics

Make sure there are no vibrations, noises or unusual handling characteristics when the vehicle is in motion. This may indicate that the wheels or tires are damaged. Hidden tire damage could also be causing the unusual handling characteristics.

If you suspect that a tire is malfunctioning, reduce your speed immediately and have the tires and wheels checked at a qualified specialist workshop.

Notes on regularly inspecting wheels and tires

WARNING Risk of injury through damaged tires

Damaged tires can cause tire pressure loss.

Check the tires regularly for signs of damage and replace any damaged tires immediately.

WARNING Risk of hydroplaning due to insufficient tire tread

Insufficient tire tread will result in reduced tire grip.

In heavy rain or slush the risk of hydroplaning is increased, in particular where speed is not adapted to suit the conditions.

Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tires.

Minimum tread depth for:

- Summer tires: 1/8 in (3 mm)
- M+S tires: 1/6 in (4 mm)
- For safety reasons, replace the tires before the legally-prescribed limit for the minimum tread depth is reached.

Carry out the following checks on all wheels regularly, at least once a month or as required, for example, prior to a long journey or driving offroad:

• Check the tire pressure (\rightarrow page 315).

- Visually inspect wheels and tires for damage.
- Check the valve caps.
- Visual check of the tire tread depth and the tire contact surface across the entire width.

The minimum tread depth for summer tires is $\frac{1}{8}$ in (3 mm) and for winter tires $\frac{1}{6}$ in (4 mm).

Six marks O show where the bar indicators (arrow) are integrated into the tire tread. They are visible once a tire tread depth of approximately $\frac{1}{16}$ in (1.6 mm) has been reached.

Notes on snow chains

 WARNING Risk of accident due to incorrect snow chain fitting

If you fit snow chains to the rear wheels, the snow chains may grind against the vehicle body or chassis components.

This could cause damage to the vehicle or the tires.

- Never fit snow chains to the rear wheels.
- Always fit snow chains to the front wheels in pairs.

! NOTE Damage to vehicle body or suspension components caused by installed snow chains

On 4MATIC vehicles, if you install snow chains on the rear wheels, you can damage vehicle body or suspension components.

On 4MATIC vehicles, only install snow chains on the front wheels. Observe the following notes when using snow chains:

- Snow chains are only permissible for certain wheel/tire combinations. You can obtain information about this from an authorized Mercedes-Benz Center.
- For safety reasons, only use snow chains that have been specifically approved for your vehicle by Mercedes-Benz, or snow chains with the same quality standard.
- If snow chains are installed, the maximum permissible speed is 30 mph (50 km/h).
- Vehicles with Active Parking Assist: Do not use Active Parking Assist when snow chains are installed.
- (i) You can deactivate ESP[®] to pull away
 (→ page 184). This allows the wheels to spin, achieving an increased driving force.

Tire pressure

Notes on tire pressure

WARNING Risk of accident due to insufficient or excessive tire pressure

Underinflated or overinflated tires pose in particular the following risks:

- The tires can burst.
- The tires can wear excessively and/or unevenly.
- The driving characteristics as well as the steering and braking characteristics may be greatly impaired.
- Comply with the recommended tire pressures and check the tire pressure of all tires, including the spare wheel, regularly:
- Monthly
- When the load changes
- Before embarking on a longer journey

- If operating conditions change, e.g. offroad driving
- Adjust the tire pressure, if necessary.

Tire pressure which is too high or too low can:

- Shorten the service life of the tires.
- Cause increased tire damage.
- Adversely affect driving characteristics and thus driving safety, e.g. due to hydroplaning.
- WARNING Risk of accident due to too low a tire pressure

Tires with pressure that is too low can overheat and burst as a consequence.

In addition, they also suffer from irregular wear, which can significantly impair the braking properties and the handling characteristics.

Avoid excessively low tire pressure.

Tire pressure which is too low can cause:

• Tire malfunctions as a result of overheating

- Impaired handling characteristics
- Irregular wear
- Increased energy consumption
- **WARNING** Risk of accident due to too high a tire pressure

Tires with excessively high pressure can burst. In addition, they also suffer from irregular wear, which can significantly impair the braking properties and the handling characteristics.

Avoid excessively high tire pressures.

Tire pressure which is too high can cause:

- Increased braking distance
- Impaired handling characteristics
- Irregular wear
- Impaired driving comfort
- Susceptibility to damage

WARNING Risk of accident due to repeated pressure drop in the tires

The wheels, valves or tires could be damaged. Too low a tire pressure can lead to the tires bursting.

- Examine the tires for foreign objects.
- Check whether the tire has a puncture or the valve has a leak.
- If you are unable to rectify the damage, contact a qualified specialist workshop.

You can find information on tire pressure for the vehicle's factory-installed tires on the following labels:

- Tire and Loading Information placard on the B-pillar of your vehicle (\rightarrow page 321).
- Tire pressure table on the inside of the socket flap (\rightarrow page 317).

Observe the maximum tire pressure (\rightarrow page 327).

Use a suitable pressure gauge to check the tire pressure. The outer appearance of a tire does not

permit any reliable conclusion about the tire pressure.

Only correct tire pressure when the tires are cold. Conditions for cold tires:

- The vehicle has been parked with the tires out of direct sunlight for at least three hours.
- The vehicle has traveled less than 1 mile (1.6 km).

The vehicle's tires heat up when driving. As the temperature of the tires increases, so too does the tire pressure.

Vehicles with a tire pressure monitoring system:

You can also check the tire pressure using the onboard computer.

The tire pressure recommended for increased load/speed in the tire pressure table can affect the ride comfort.

WARNING Risk of accident due to unsuitable accessories on tire valves

If you mount unsuitable accessories onto tire valves, the tire valves may be overloaded and

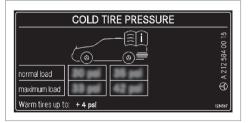

malfunction, which can cause tire pressure loss.

Only screw standard valve caps or valve caps specifically approved by Mercedes-Benz for your vehicle onto the tire valve.

Tire pressure table

The tire pressure table is on the inside of the socket flap.

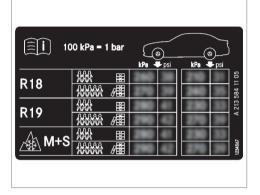

(i) The data shown in the images is example data.

The tire pressure table shows the recommended tire pressure for all tires approved for this vehicle. The recommended tire pressures apply for cold tires under various operating conditions, i.e. loading and/or speed of the vehicle.

If one or more tire sizes precede a tire pressure, the tire pressure information following is only valid for those tire sizes.

The load conditions "partially laden" and "fully laden" are defined in the table for different numbers of passengers and amounts of luggage. The actual number of seats may differ from this.

Some tire pressure tables only show the rim diameter instead of the complete tire size, e.g. **R18**. The rim diameter is part of the tire size and can be found on the tire side wall (\rightarrow page 328).

Be sure to also observe the following further related subjects:

- Notes on tire pressure (\rightarrow page 315)
- Tire and Loading Information placard (→ page 321)

• Maximum tire pressure (\rightarrow page 327)

Checking the tire pressure manually

- Read the tire pressure recommended for the current operating conditions from the Tire and Loading Information placard or the tire pressure table. Observe the notes on tire pressure.
- Remove the valve cap of the tire to be checked.
- Press the tire pressure gauge securely onto the valve.
- Read the tire pressure.
- If the tire pressure is lower than the recommended value, increase the tire pressure to the recommended value.
- If the tire pressure is higher than the recommended value, release air. To do so, press down the metal pin in the valve, e.g. using the tip of a pen. Then, check the tire pressure again using the tire pressure gauge.
- Screw the valve cap onto the valve.

Further related subjects:

- Notes on tire pressure (\rightarrow page 315)
- Tire pressure table (\rightarrow page 317)
- Tire and Loading Information placard (→ page 321)

Tire pressure monitoring system

Function of the tire pressure monitoring system

DANGER Risk of accident due to incorrect tire pressure

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.

The system checks the tire pressure and the tire temperature of the tires installed on the vehicle by means of a tire pressure sensor.

The tire pressure and the tire temperature appear in the on-board computer (\rightarrow page 319).

If there is a substantial pressure loss or if the tire temperature is excessive, you will be warned with display messages (\rightarrow page 398) or the warning lamp in the instrument cluster (\rightarrow page 413).

The tire pressure monitoring system is only an aid. It is the driver's responsibility to set the tire pressure to the recommended cold tire pressure suitable for the operating situation.

In most cases, the tire pressure monitoring system will automatically update the new reference values after you have changed the tire pressure. You can, however, also update the reference values by restarting the tire pressure monitoring system manually (\rightarrow page 320).

System limits

The system may be impaired or may not function particularly in the following situations:

- Incorrect reference values were taught in
- Sudden pressure loss caused by a foreign object penetrating the tire, for example
- There is a malfunction caused by another radio signal source

Checking the tire pressure with the tire pressure monitoring system

Requirements:

• The vehicle is switched on.

On-board computer:

→ Service >> Tires

One of the following displays appears:

• Current tire pressure and tire temperature of the individual wheels:

- Tire pressure will be displayed after driving a few minutes
- Tire Pressure Monitor Active: the teach-in process of the system is not yet complete. The tire pressures are already being monitored.
- Compare the tire pressure with the recommended tire pressure for the current operating

condition (\rightarrow page 317). Additionally, observe the notes on cold tires (\rightarrow page 315).

i) The values displayed in the on-board computer may deviate from those of the tire pressure gauge as they refer to sea level. At high elevations, the tire pressure values indicated by a pressure gauge are higher than those shown by the on-board computer. In this case, do not reduce the tire pressure.

Restarting the tire pressure monitoring system

Requirements:

 The recommended tire pressure is correctly set for the respective operating status on all of the wheels (→ page 315).

Restart the tire pressure monitoring system in the following situations:

- The tire pressure has changed.
- The wheels or tires have been changed or newly installed.

On-board computer:

→ Service → Tires

- Swipe downwards on Touch Control on the left-hand side of the steering wheel.
 The Use Current Pressures as New Reference Values message is shown in the Instrument Display.
- To restart, press Touch Control on the lefthand side of the steering wheel.
 The Tire Press. Monitor Restarted message is shown in the Instrument Display.

Current warning messages are deleted and the yellow (!) warning lamp goes out.

After you have been driving for a few minutes, the system checks whether the current tire pressures are within the specified range. The current tire pressures are then accepted as reference values and monitored.

Be sure to also pay attention to the following related topic:

• Notes on tire pressure (\rightarrow page 315)

Loading the vehicle

Notes on Tire and Loading Information placard

 WARNING Risk of accident from overloaded tires

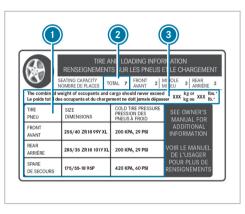

Overloaded tires may overheat and burst as a consequence. Overloaded tires can also impair the steering and handling characteristics and lead to brake failure.

- Observe the load rating of the tires.
- ► The load rating must be at least half the permissible axle load of the vehicle.
- Never overload the tires by exceeding the maximum load.

The Tire and Loading Information placard is on the B-pillar on the driver's side of the vehicle.

• Tire and Loading Information placard

(i) The data shown in the illustration is example data.

The Tire and Loading Information placard shows the following information:

• Maximum number of seats ② according to the maximum number of people permitted to travel in the vehicle.

- Maximum permissible load (2) comprises the gross weight of all vehicle occupants, load and luggage.
- Recommended tire pressure ① for cold tires. The recommended tire pressures are valid for the maximum permissible load and up to the maximum permissible vehicle speed.

Please also note:

- Information on permissible weights and loads on the vehicle identification plate (→ page 345).
- Information on tire pressure in the tire pressure table (→ page 317).

Further related subjects:

- Determining the maximum permissible load (→ page 322)
- Notes on tire pressure (\rightarrow page 315).

Steps for Determining Correct Load Limit

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575, pursuant to

the "National Traffic and Motor Vehicle Safety Act of 1966".

- (1): Locate the statement "The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle's placard.
- (2): Determine the combined weight of the driver and passengers that will be riding in your vehicle.
- (3): Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
- (4): The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1,400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1,400 750 (5 x 150) = 650 lbs.)
- (5): Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

- (6): If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.
- (i) Not all vehicles are permitted to tow a trailer. Towing a trailer is only permitted if a trailerhitch is installed. Please consult an authorized Mercedes-Benz dealer if you have any questions about towing a trailer with your vehicle.

Even if you have calculated the total load carefully, you should still make sure that the maximum permissible gross weight and the maximum gross axle weight rating of your vehicle are not exceeded. Details can be found on the vehicle identification plate.

Have your loaded vehicle – including driver, occupants and load – weighed on a vehicle weighbridge.

The measured values may not exceed the maximum permissible values stated on the vehicle identification plate.

- (i) The data shown in the illustration is example data.

Tire Quality Grading

In accordance with the US Department of Transportation's "Uniform Tire Quality Grading Standards", tire manufacturers are required to grade their tires on the basis of the following three performance factors:

- 1 Tread wear grade
- 2 Traction grade
- 3 Temperature grade
- (i) The data shown in the illustration is example data.
- (i) The classification is not legally stipulated for Canada, but it is generally stated.

Tread wear grade

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half $(1 \ 1/2)$ times as

well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

Traction grade

DANGER Risk of accident due to inadequate traction

The traction grade assigned to this tire is based on straight-ahead braking traction tests.

- Always adapt your driving style and drive at a speed to suit the prevailing traffic and weather conditions.
- NOTE Damage to the drivetrain from wheelspin
- Avoid wheelspin.

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Temperature grade

WARNING Risk of accident from tire overheating and tire failure

Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.

- Observe the recommended tire pressure.
- Regularly check the pressure of all the tires.
- Adjust the tire pressure, if necessary.

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

DOT, Tire Identification Number (TIN)

US tire regulations stipulate that every tire manufacturer or retreader must imprint a TIN in or on the side wall of each tire produced.

(i) The data shown in the image is example data. The TIN is a unique identification number to identify tires and comprises the following:

- DOT (Department of Transportation): tire symbol marks () indicating that the tire complies with the requirements of the US Department of Transportation.
- Manufacturer identification code: manufacturer identification code ② contains details of the tire manufacturer. New tires have a code with two symbols. Retreaded tires have a code with four symbols. Further information on retreaded tires (→ page 332).
- Tire size: identifier (3) describes the tire size.
- Tire type code: tire type code () can be used by the manufacturer as a code to describe specific characteristics of the tire.
- Manufacturing date: manufacturing date provides information about the age of a tire. The 1st and 2nd positions represent the calendar week and the 3rd and 4th positions state the year of manufacture (e.g. "3208" represents the 32nd week of 2008).

Information on the maximum tire load

(i) The data shown in the image is example data. Maximum tire load () is the maximum permissible weight for which the tire is approved.

Do not overload the tires by exceeding the specified load limit. The maximum permissible load can be found on the vehicle's Tire and Loading Information placard on the B-pillar on the driver's side (\rightarrow page 321).

Specifications for maximum tire pressure

(i) The data shown in the illustration is example data.

Never exceed maximum tire pressure \bigcirc specified for the tire. Always observe the recommended tire pressure for your vehicle when adjusting the tire pressure (\rightarrow page 317).

Information on tire characteristics

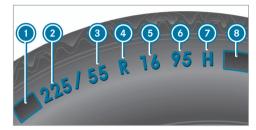

(i) The data shown in the image is example data. This information describes the type of tire cord and the number of layers in side wall (1) and under tire tread (2).

Tire size designation, load-bearing capacity, speed rating and load index

▲ WARNING Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating

Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.

- Therefore, only use tire types and sizes approved for your vehicle model.
- Observe the tire load rating and speed rating required for your vehicle.

- First letter(s)
- 2 Nominal tire width in millimeters
- 3 Aspect ratio in %
- ④ Tire code
- 🗕 Rim diameter
- Load-bearing index
- Speed rating
- Load index
- (i) The data shown in the illustration is example data.

Information about reading tire data can be obtained from any qualified specialist workshop.

First letter(s) ①:

- Without: passenger vehicle tires according to European manufacturing standards.
- "P": passenger vehicle tires according to US manufacturing standards.
- "LT": light truck tires according to US manufacturing standards.
- "T": compact emergency spare wheels with high tire pressure that are only designed for temporary use in an emergency.

Aspect ratio (3):

Ratio between tire height and tire width in percent (tire height divided by tire width).

Tire code 💿 (tire type):

- "R" radial tire
- "D": bias ply tire
- "B": bias belted tires
- "ZR": radial tire with a maximum speed above 149 mph (240 km/h) (optional)

Rim diameter (5):

The diameter of the bead seat (not the diameter of the rim flange). The rim diameter is specified in inches (in).

Load-bearing index ():

Numerical code that specifies the maximum loadbearing capacity of a tire (e.g. "91" corresponds to 1356 lbs (615 kg)).

The load-bearing capacity of the tire must be at least half the gross axle weight rating of your vehicle. Do not overload the tires by exceeding the specified load limit.

See also:

- Maximum permissible load on the Tire and Loading Information placard (→ page 321)
- Maximum tire load (\rightarrow page 327)
- Load index

Speed rating 🕗:

Specifies the approved maximum speed of the tire.

(i) An electronic speed limiter prevents your vehicle from exceeding a speed of 130 mph (210 km/h).

Make sure that your tires have the required speed rating. You can obtain information on the required speed rating from an authorized Mercedes-Benz Center.

Summer tires

Index	Speed rating
Q	up to 100 mph (160 km/h)
R	up to 106 mph (170 km/h)
S	up to 112 mph (180 km/h)
Т	up to 118 mph (190 km/h)
Н	up to 130 mph (210 km/h)
V	up to 149 mph (240 km/h)
W	up to 168 mph (270 km/h)
Y	up to 186 mph (300 km/h)

Index	Speed rating
ZRY ¹	up to 186 mph (300 km/h)
ZR(Y) ¹	over 186 mph (300 km/h)
ZR ¹	over 149 mph (240 km/h)

- Specifying the speed rating as the "ZR" index in tire code () is optional for tires up to 186 mph (300 km/h).
- If your tire code (a) includes "ZR" and there is no speed rating (c), find out what the maximum speed is from the tire manufacturer.
- If load-bearing index (6) and speed rating (7) are in brackets, the maximum speed rating of your tire is above 186 mph (300 km/h). To find out the maximum speed, ask the tire manufacturer.

All-weather tires and winter tires		
Index	Speed rating	
Q M+S ²	up to 100 mph (160 km/h)	
T M+S ²	up to 118 mph (190 km/h)	
H M+S ²	up to 130 mph (210 km/h)	
V M+S ²	up to 149 mph (240 km/h)	

Winter tires bear the 🛕 snowflake symbol and fulfill the requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) regarding the tire traction on snow.

Load index (1):

- · No specification given: standard load (SL) tire
- "XL" or "Extra Load": extra load tire or reinforced tire
- "Light Load": light load tire

 "C", "D", "E": a load range that depends on the maximum load that the tire can carry at a certain pressure

Definition of terms for tires and loading

Tire structure and characteristics: describes the number of layers or the number of rubber-coated belts in the tire contact surface and the tire wall. These are made of steel, nylon, polyester and other materials.

Bar: metric unit for tire pressure. 14.5038 pounds per square inch (psi) and 100 kilopascal (kPa) is the equivalent of one bar.

DOT (Department of Transportation): DOT-marked tires fulfill the requirements of the US Department of Transportation.

Average weight of the vehicle occupants: the number of vehicle occupants for which the vehicle is designed, multiplied by 150 lb (68 kg).

Uniform Tire Quality Grading Standards: a uniform standard to grade the quality of tires with regard

"ZR" stated in the tire code.
 Or "M+S A " for winter tires.

to tread quality, tire traction and temperature characteristics. The quality grading assessment is made by the manufacturer following specifications from the U.S. government. The quality grade of a tire is imprinted on the side wall of the tire.

Recommended tire pressure: the recommended tire pressure is the tire pressure specified for the tires mounted to the vehicle at the factory.

The tire and information table contains the recommended tire pressures for cold tires, the maximum permissible load and the maximum permissible vehicle speed.

The tire pressure table contains the recommended tire pressures for cold tires under various operating conditions, i.e. loading and/or speed of the vehicle.

Increased vehicle weight due to optional equip-

ment: the combined weight of all standard and optional equipment available for the vehicle, regardless of whether it is actually installed on the vehicle or not.

Rim: the part of the wheel on which the tire is installed.

GAWR (Gross Axle Weight Rating): the GAWR is the maximum permissible axle load. The actual load on an axle must never exceed the gross axle weight rating. The gross axle weight rating can be found on the vehicle identification plate on the B-pillar on the driver's side.

Speed rating: the speed rating is part of the tire identification. It specifies the speed range for which a tire is approved.

GVW (Gross Vehicle Weight): the gross vehicle weight comprises the weight of the vehicle including fuel, tools, the spare wheel, accessories installed, occupants, luggage and the trailer drawbar noseweight, if applicable. The gross vehicle weight must not exceed the gross vehicle weight rating GVWR as specified on the vehicle identification plate on the B-pillar on the driver's side.

GVWR (Gross Vehicle Weight Rating): the GVWR is the maximum permitted gross weight of the fully laden vehicle (weight of the vehicle including all accessories, occupants, fuel, luggage and the trailer drawbar noseweight if applicable). The gross vehicle weight rating is specified on the vehicle identification plate on the B-pillar on the driver's side. **Maximum weight of the laden vehicle:** the maximum weight is the sum of the curb weight of the vehicle, the weight of the accessories, the maximum load and the weight of optional equipment installed at the factory.

Kilopascal (kPa): metric unit for tire pressure. 6.9 kPa corresponds to 1 psi. Another unit for tire pressure is bar. 100 kilopascal (kPa) equals 1 bar.

Load index: in addition to the load-bearing index, the load index may also be imprinted on the side wall of the tire. This specifies the load-bearing capacity of the tire more precisely.

Curb weight: the weight of a vehicle with standard equipment including the maximum capacity of fuel, oil and coolant. It also includes the air conditioning system and optional equipment if these are installed on the vehicle, but does not include passengers or luggage.

Maximum tire load: the maximum tire load is the maximum permissible weight in kilograms or lbs for which a tire is approved.

Maximum permissible tire pressure: maximum permissible tire pressure for one tire.

Maximum load on one tire: maximum load on one tire. This is calculated by dividing the maximum axle load of one axle by two.

PSI (pounds per square inch): standard unit of measurement for tire pressure.

Aspect ratio: ratio between tire height and tire width in percent.

Tire pressure: pressure inside the tire applying an outward force to every square inch of the tire. The tire pressure is specified in pounds per square inch (psi), in kilopascals (kPa) or in bar. The tire pressure should only be corrected when the tires are cold.

Cold tire pressure: the tires are cold when the vehicle has been parked for at least 3 hours without direct sunlight on the tires or the vehicle has been driven for less than 1 mile (1.6 km).

Tire contact surface: the part of the tire that comes into contact with the road.

Tire bead: the purpose of the tire bead is to ensure that the tire sits securely on the wheel rim. There are several wire cores in the tire bead to prevent the tire from changing length on the wheel rim. **Side wall:** the part of the tire between the tread and the tire bead.

Weight of optional equipment: the combined weight of the optional equipment weighing more than the replaced standard parts and more than 5 lbs (2.3 kg). This optional equipment, such as high-performance brakes, level control system, a roof luggage rack or high-performance batteries, is not included in the curb weight and the weight of the accessories.

TIN (Tire Identification Number): a unique identification number which can be used by a tire manufacturer to identify tires, for example, in a product recall, and thus identify the purchasers. The TIN is made up of the manufacturer's identity code, tire size, tire type code and the manufacturing date.

Load-bearing index: the load-bearing index is a code that contains the maximum load-bearing capacity of a tire.

Traction: traction is the grip resulting from friction between the tires and the road surface.

Wear indicator: narrow bars (tread wear bars) that are distributed over the tire contact surface. If the

tire tread is level with the bars, the wear limit of 1/16 in (1.6 mm) has been reached.

Distribution of vehicle occupants: distribution of vehicle occupants over designated seat positions in a vehicle.

Maximum permissible payload weight: nominal load and luggage load plus 150 lb (68 kg) multiplied by the number of seats in the vehicle.

Changing a wheel

Notes on selecting, installing and replacing tires

- I NOTE Mercedes-AMG vehicles
- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.
- WARNING Risk of accident due to incorrect wheel and tire dimensions

If wheels and tires of the wrong size are installed, the service brakes or components in the brake system and in the wheel suspension may be damaged.

Always replace wheels and tires with ones that fulfill the specifications of the original part.

For wheels, pay attention to the following:

- Designation
- Type

For tires, pay attention to the following:

- Designation
- Manufacturer
- Type
- ▲ **WARNING** Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating

Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.

- Therefore, only use tire types and sizes approved for your vehicle model.
- Observe the tire load rating and speed rating required for your vehicle.

NOTE Vehicle and tire damage through tire types and sizes that have not been approved

For safety reasons, only use tires, wheels and accessories which have been specially approved by Mercedes-Benz for your vehicle.

These tires are specially adapted to the active safety systems, such as ABS, ESP^{\circledast} and 4MATIC, and marked as follows:

- MO = Mercedes-Benz Original
- MOE = Mercedes-Benz Original Extended (run-flat tire only for certain wheels)
- MO1 = Mercedes-Benz Original (only certain AMG tires)

Otherwise, certain properties, such as handling characteristics, vehicle noise emissions, consumption, etc. could be adversely affected. Furthermore, other tire sizes could result in the tires rubbing against the body and axle components when loaded. This could result in damage to the tire or the vehicle.

Only use tires, wheels and accessories that have been checked and recommended by Mercedes-Benz.

NOTE Risk to driving safety from retreaded tires

Retreaded tires are neither tested nor recommended by Mercedes-Benz, since previous damage cannot always be detected on retreaded tires.

For this reason driving safety cannot be guaranteed.

Do not use used tires if you have no information about their previous usage.

NOTE Possible wheel and tire damage when driving over obstacles

Large wheels have a smaller section width. As the section width decreases, the risk of wheels and tires being damaged when driving over obstacles increases.

- Avoid obstacles or drive especially carefully.
- Reduce your speed when driving over curbs, speed bumps, manhole covers and potholes.
- Avoid particularly high curbs.
- I NOTE Possible wheel and tire damage when parking on curbs or in potholes

Parking on curbs or in potholes may damage the wheels and tires.

- ▶ If possible, park only on flat surfaces.
- Avoid curbs and potholes when parking.

NOTE Damage to electronic component parts from the use of tire-mounting tools

Vehicles with a tire pressure monitoring system: Electronic component parts are located in the wheel. Tire-mounting tools should not be used in the area of the valve.

This could otherwise damage the electronic component parts.

- Have the tires changed at a qualified specialist workshop only.
- NOTE Damage to summer tires at low ambient temperatures

At low ambient temperatures, tears could form when driving with summer tires, causing permanent damage to the tires.

At temperatures below 45 °F (7 °C) use
 M+S tires.

Accessory parts which are not approved for your vehicle by Mercedes-Benz, or which are not used correctly, can impair the operating safety.

Before purchasing and using non-approved accessories, visit a qualified specialist workshop and inquire about:

- Suitability
- Legal stipulations
- Factory recommendations
- WARNING Risk of accident with high performance tires

The special tire tread in combination with the optimized tire compound means that the risk of skidding and hydroplaning on wet roads is increased.

In addition, the tire grip is greatly reduced at a low outside temperature and tire running temperature.

- Switch on the ESP[®] and adapt your driving style accordingly.
- Use A M+S tires at outside temperatures of less than 50 °F (10 °C).
- Only use the tires for their intended purpose.

Observe the following when selecting, installing and replacing tires:

- Furthermore, the use of certain tire types in certain regions and areas of operation can be highly beneficial.
- Only use tires and wheels of the same type (summer tires, winter tires, MOExtended tires) and the same make.
- Only install wheels of the same size on one axle (left and right).

It is only permissible to install a different wheel size in the event of a flat tire in order to drive to the specialist workshop.

- Vehicles with a tire pressure monitoring system: All installed wheels must be equipped with functioning sensors for the tire pressure monitoring system.
- At temperatures below 45 °F (7 °C) use winter tires or all-season tires marked A M+S for all wheels.

Winter tires provide the best possible grip in wintry road conditions.

- For M+S tires, only use tires with the same tread.
- Observe the maximum permissible speed for the M+S tires installed.

If the tire's maximum speed is below that of the vehicle, this must be indicated by an appropriate label in the driver's field of vision.

- Break in new tires at moderate speeds for the first 60 miles (100 km).
- Replace the tires after six years at the latest, regardless of wear.
- When replacing with tires that do not feature run-flat characteristics: vehicles with MOExtended tires are not equipped with a TIREFIT kit at the factory. Equip the vehicle with a TIREFIT kit after replacing with tires that do not feature run-flat characteristics, e.g. winter tires.

For more information on wheels and tires, contact a qualified specialist workshop.

Be sure to also observe the following further related subjects:

• Notes on tire pressure (\rightarrow page 315)

- Tire and Loading Information placard (→ page 321)
- Tire size designation, load-bearing capacity, speed rating and load index (→ page 328)
- Tire pressure table (\rightarrow page 317)
- Notes on the emergency spare wheel (→ page 341)

Notes on rotating the wheels

WARNING Risk of injury through different
 wheel sizes

Rotating the front and rear wheels can severely impair the driving characteristics.

The wheel brakes or suspension components may also be damaged.

Rotate front and rear wheels only if the wheels and tires are of the same dimensions.

The wear patterns on the front and rear wheels differ:

• Front wheels wear more on the tire shoulder

Rear wheels wear more in the center of the tire

Do not drive with tires that have too little tread depth. This significantly reduces traction on wet roads (hydroplaning).

On vehicles that have the same size front and rear wheels, rotate the wheels according to the intervals in the tire manufacturer's warranty book in your vehicle documents. If this is not available, rotate the tires every 3,000 to 6,000 miles (5,000 to 10,000 km), depending on the wear. Ensure that the direction of rotation is maintained.

Observe the instructions and safety notes on "Changing a wheel" when doing so (\rightarrow page 337).

Notes on storing wheels

When storing wheels, observe the following notes:

- After removing wheels, store them in a cool, dry and preferably dark place.
- Protect the tires from contact with oil, grease or fuel.

Overview of the tire-change tool kit

! NOTE Mercedes-AMG vehicles

 Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

Apart from some country-specific variants, vehicles are not equipped with a tire-change tool kit. For more information on which tire-changing tools are required and approved for performing a wheel change on your vehicle, consult a qualified specialist workshop.

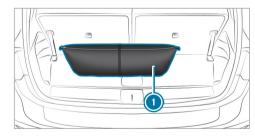

You require the following tools, for example, to change a wheel:

- Jack
- Chock
- Lug wrench
- · Alignment bolt

The tire-change tool kit is located in tool bag () in the cargo compartment.

Vehicles with two rows of seats

The tool bag contains:

- Jack
- Gloves
- Lug wrench
- Alignment bolt
- Folding chock
- Ratchet for jack

Preparing the vehicle for a wheel change

Requirements:

- The vehicle is not on a slope.
- The vehicle is on solid, non-slippery and level ground.
- The required tire-change tool kit is available.
- (i) If your vehicle is not equipped with the tirechange tool kit, consult a qualified specialist workshop to find out about suitable tools.
- Apply the electric parking brake manually.
- Move the front wheels to the straight-ahead position.

- Shift the transmission to position **P**.
- Switch off the vehicle.
- Make sure that the vehicle cannot be started.
- Place chocks or other suitable items under the front and rear of the wheel that is diagonally opposite the wheel you wish to change.

Raising the vehicle when changing a wheel

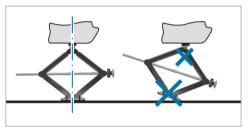

Requirements:

- There are no persons in the vehicle.
- The vehicle has been prepared for a wheel change (→ page 337).

Important notes on using the jack:

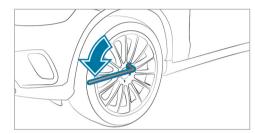

- Use only a vehicle-specific jack that has been approved by Mercedes-Benz to raise the vehicle.
- The jack is only designed for raising and holding the vehicle for a short time while a wheel is being changed and not for maintenance work under the vehicle.

- The jack must be placed on a firm, flat and non-slip surface. If necessary, use a large, flat, load-bearing, non-slip underlay.
- The foot of the jack must be positioned vertically under the jack support point.

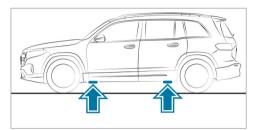

Rules of conduct when the vehicle is raised:

- Never place your hands or feet under the vehicle.
- Never lie under the vehicle.
- Do not open or close any doors or the tailgate.

 Using the lug wrench, loosen the wheel bolts on the wheel you wish to change by about one full turn. Do not unscrew the screws completely.

Position of jack support points

- **! NOTE** Mercedes-AMG vehicles
- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.
- WARNING Risk of injury from incorrect positioning of the jack

If you do not position the jack correctly at the appropriate jacking point of the vehicle, the jack could tip with the vehicle raised.

Only position the jack at the appropriate jacking point of the vehicle. The base of

the jack must be positioned vertically under the jacking point of the vehicle.

! NOTE Damage to the vehicle due to using an unsuitable jack

You can damage the vehicle and, in particular the high-voltage battery, if you use a jack that is not specifically designed for the jack support points of the vehicle.

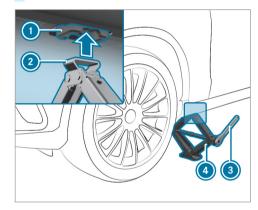

Only use jacks that are specifically designed for the jack support points, or use an appropriate adapter.

! NOTE Risk of damage to the vehicle due to incorrect positioning of the jack

If you do not position the jack at the designated jack support points, you could damage your vehicle and, in particular, the high-voltage battery.

 Only position the jack at the designated jack support points.

 Take the ratchet out of the tire-change tool kit and place it on the hexagon nut of the jack so that the letters "AUF" are visible.

- Position support ② of jack ④ on jack support point ①.
- Turn ratchet (3) clockwise until support (2) sits completely on jack support point (1) and the base of the jack lies evenly on the ground.

- Turn ratchet ③ until the tire is raised a maximum of 1.2 in (3 cm) from the ground.
- Loosen and remove the wheel (\rightarrow page 339).

Removing a wheel

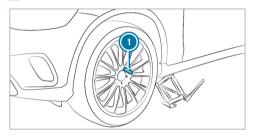

Requirements:

- The vehicle is raised (\rightarrow page 337).
- ! NOTE Mercedes-AMG vehicles
- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

When changing a wheel, avoid applying any force to the brake discs, since this could impair the level of comfort when braking.

- **!** NOTE Damage to threading from dirt on wheel bolts
- Do not place wheel bolts in sand or on a dirty surface.

Unscrew the uppermost wheel bolt completely.

- Screw alignment bolt ① into the thread instead of the wheel bolt.
- Unscrew the remaining wheel bolts completely.
- Remove the wheel.

Installing a new wheel

Requirements:

 The wheel to be changed is removed and the alignment bolt is screwed in (→ page 339).

! NOTE Mercedes-AMG vehicles

 Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

WARNING Risk of accident from losing a wheel

Oiled, greased or damaged wheel bolt/wheel nut threads or wheel hub/wheel mounting bolt threads can cause the wheel bolts/wheel nuts to come loose.

- Never oil or grease the threads.
- In the event of damage to the threads, contact a qualified specialist workshop immediately.
- Have the damaged wheel bolts or damaged hub threads replaced.
- Do not continue driving.
- Observe the information on the choice of tires $(\rightarrow page 332)$.

For tires with a specified direction of rotation, an arrow on the side wall of the tire indicates the correct direction of rotation. Observe the direction of rotation when installing.

- Slide the wheel to be mounted onto the alignment bolt and push it on.
- WARNING Risk of injury from tightening wheel bolts and nuts

If you tighten the wheel bolts or wheel nuts when the vehicle is raised, the jack could tip.

- Only tighten wheel bolts or wheel nuts when the vehicle is on the ground.
- Be sure to observe the instructions and safety notes on "Changing a wheel" (\rightarrow page 332).
- For safety reasons, only use wheel bolts which have been approved by Mercedes-Benz and for the wheel in question.

I NOTE Damage to paintwork of the wheel rim when screwing in the first wheel bolt

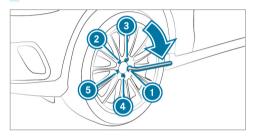

If the wheel has too much play when screwing in the first wheel bolt, the wheel rim paint can be damaged.

- Press the wheel firmly against the wheel hub when screwing in the first wheel bolt.
- Tighten the wheel bolts evenly in a diagonal pattern in the order indicated until they are finger-tight.
- Unscrew and remove the alignment bolt.
- Tighten the last wheel bolt until it is fingertight.
- Lower the vehicle (\rightarrow page 340).

Lowering the vehicle after a wheel change

Requirements:

 The new wheel has been installed (→ page 339). To lower the vehicle: place the ratchet onto the hexagon nut of the jack so that the letters "AB" are visible and turn counter-clockwise.

- Tighten the wheel bolts evenly in a diagonal pattern in the order indicated () to () with an initial maximum force of 59 lb-ft (80 Nm).
- Tighten the wheel bolts evenly in a diagonal pattern in the order indicated () to () with the specified tightening torque of 111 lb-ft (150 Nm).

WARNING Risk of accident due to incorrect tightening torque

The wheels could come loose if the wheel bolts or wheel nuts are not tightened to the prescribed torque.

- Ensure that the wheel bolts or wheel nuts are tightened to the prescribed tightening torque.
- If you are not sure, do not move the vehicle. Contact a qualified specialist workshop and have the tightening torque checked immediately.
- Check the tire pressure of the newly installed wheel and adjust it if necessary.
- i) The following does not apply if the new wheel is an emergency spare wheel.
- Vehicles with a tire pressure monitoring system: Restart the tire pressure monitoring system (→ page 320).

Emergency spare wheel

Notes on the emergency spare wheel

WARNING Risk of accident caused by incorrect wheel and tire dimensions

The wheel or tire sizes and the tire type of the emergency spare wheel or spare wheel and the wheel to be replaced may differ. The emergency spare wheel or spare wheel can significantly impair driving characteristics of the vehicle.

To prevent hazardous situations:

- Drive carefully.
- Never install more than one emergency spare wheel or spare wheel that differs in size.
- Only use an emergency spare wheel or spare wheel briefly.
- Do not deactivate ESP[®].
- Have the emergency spare wheel or spare wheel of a different size replaced at the nearest qualified specialist work-

shop. The new wheel must have the correct dimensions.

Observe the following notes on installing an emergency spare wheel:

- The maximum permissible speed with an emergency spare wheel installed is 50 mph (80 km/h).
- Do not equip the emergency spare wheel with snow chains.
- Replace the emergency spare wheel after six years at the latest, regardless of wear.
- Check the tire pressure of the emergency spare wheel installed. Correct the pressure as necessary.
- (i) The specified tire pressure is stated on the label of the emergency spare wheel.
- (i) Vehicles with a tire pressure monitoring system: If an emergency spare wheel is installed, the tire pressure monitoring system cannot function reliably. For a few minutes after an emergency spare wheel is installed, the system may still display the tire pressure of the

removed wheel. Only restart the system again when the emergency spare wheel has been replaced with a new wheel.

Be sure to also observe the following further related subjects:

- Notes on tire pressure (\rightarrow page 315)
- Tire and Loading Information placard (→ page 321)
- Tire pressure table (\rightarrow page 317)
- Notes on installing tires (\rightarrow page 332)
- Installing an emergency spare wheel
 (→ page 337)

Notes on technical data

NOTE Mercedes-AMG vehicles

 Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

The data stated only applies to vehicles with standard equipment. You can obtain further information from an authorized Mercedes-Benz Center.

Vehicle electronics

Two-way radios

Notes on installing two-way radios

WARNING Risk of accident due to improper work on two-way radios

If two-way radios are manipulated or retrofitted incorrectly, the electromagnetic radiation from the two-way radios can interfere with the vehicle electronics and jeopardize the operating safety of the vehicle.

- You should have all work on electrical and electronic components carried out at a qualified specialist workshop.
- WARNING Risk of accident due to improper operation of two-way radios

If you use two-way radios in the vehicle improperly, their electromagnetic radiation can disrupt the vehicle's electronics. This is the case in the following situations, in particular:

- The two-way radio is not connected to an exterior antenna.
- The exterior antenna is installed incorrectly or is not a low-reflection antenna.

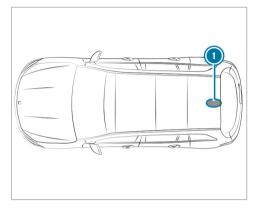

This could jeopardize the operating safety of the vehicle.

 Have the low-reflection exterior antenna installed at a qualified specialist workshop.

- When operating two-way radios in the vehicle, always connect them to the lowreflection exterior antenna.
- NOTE Invalidation of the operating permit due to failure to comply with the instructions for installation and use

The operating permit may be invalidated if the instructions for installation and use of two-way radios are not observed.

- Only use approved frequency bands.
- Observe the maximum permissible output power in these frequency bands.
- Only use approved antenna positions.

Rear roof area

On vehicles with a panoramic sliding sunroof, installing an antenna is not permitted.

Use Technical Specification ISO/TS 21609 (Road Vehicles – "EMCs for installation of aftermarket radio frequency transmitting equipment") when retrofitting two-way radios. Comply with the legal requirements for detachable parts.

If your vehicle has installing for two-way radio equipment, use the power supply and antenna connectors provided in the pre-installation. Observe the manufacturer's supplements when installing.

Two-way radio transmission output

The maximum transmission output (PEAK) at the base of the antenna must not exceed the values in the following table.

Frequency band and maximum transmission output

Frequency band	Maximum transmis- sion output
2 m frequency band 144 - 174 MHz	50 W
Terrestrial Trunked Radio (TETRA) 380 - 460 MHz	10 W
70 cm frequency band 430 - 470 MHz	35 W

Frequency band	Maximum transmis- sion output
Two-way radio 2G	2 W
Two-way radio 3G/4G/5G	0.5 W

The following devices can be used in the vehicle without restrictions:

- Two-way radios with a maximum transmission output of up to 100 mW
- Two-way radios with transmitter frequencies in the 380 - 420 MHz frequency band and a maximum transmission output of up to 2 W (TETRA)
- Mobile phones (2G/3G/4G/5G)

There are no restrictions when positioning the antenna on the outside of the vehicle for the following frequency bands:

- TETRA
- 2G/3G/4G/5G

Regulatory radio identification and notes Regulatory radio identification of small components

Manufacturer information about radio-based vehicle components can be found using the key phrase "Regulatory radio identification" in the Digital Operator's Manual in the vehicle, on the Internet and in the app.

Regulatory radio identification - Indonesia

Manufacturer information about radio-based vehicle components can be found using the key phrase "Regulatory radio identification – Indonesia" in the Digital Operator's Manual in the vehicle, on the Internet and in the app.

(i) These are not small components. Information about small components can be found using the key phrase "Regulatory radio identification of small components".

Information on installation clearances

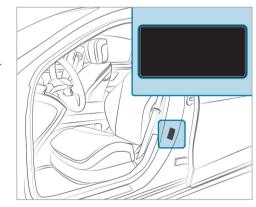

Information on installation clearances of wireless vehicle components can be found using the key phrase "Installation clearances" in the Digital Operator's Manual in the vehicle, on the Internet, and in the app.

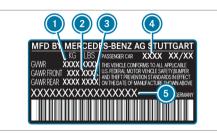

Further component-specific information

Further component-specific information can be found using the key phrase "further componentspecific information" in the Digital Operator's Manual in the vehicle, on the Internet and in the app.

Vehicle identification plate, VIN and engine number overview

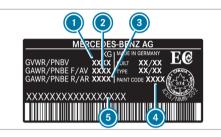

Vehicle identification plate

Vehicle identification plate (USA only)

- Maximum permissible gross vehicle weight
- 2 Maximum permissible front axle load
- 3 Maximum permissible rear axle load
- Paint code
- 5 VIN (vehicle identification number)

Vehicle identification plate (Canada only)

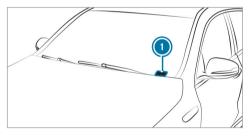

- Maximum permissible gross vehicle weight
- 2 Maximum permissible front axle load
- 3 Maximum permissible rear axle load
- Paint code
- S VIN (vehicle identification number)

The permissible gross vehicle weight is made up of the vehicle weight, all vehicle occupants and the load. The maximum gross axle weight rating is the maximum weight that can be carried on one axle (front or rear axle). Do not exceed the maximum permissible gross vehicle weight or the maximum gross axle weight rating for the front or rear axle.

VIN in the engine compartment

The VIN can be found on the crossmember in the engine compartment. Further information can be obtained at a qualified specialist workshop.

VIN at the lower edge of the windshield

VIN (vehicle identification number) as label

Operating fluids

Notes on operating fluids

WARNING Risk of injury from operating fluids harmful to your health

Operating fluids may be poisonous and harmful to your health.

- Observe the text on the original containers when using, storing or disposing of operating fluids.
- Always store operating fluids sealed in their original containers.
- Always keep children away from operating fluids.
- ENVIRONMENTAL NOTE Pollution of the environment due to irresponsible disposal of operating fluids

Incorrect disposal of operating fluids can cause considerable damage to the environment.

Dispose of operating fluids in an environmentally responsible manner.

Operating fluids include the following:

- Lubricants
- Coolant
- Brake fluid
- Windshield washer fluid
- Climate control system refrigerant

Only use products approved by Mercedes-Benz. Damage caused by the use of products that have not been approved is not covered by the Mercedes-Benz warranty or goodwill gestures.

You can identify operating fluids approved by Mercedes-Benz by the following inscriptions on the container:

- MB-Freigabe (e.g. MB-Freigabe 229.51)
- MB-Approval (e.g. MB-Approval 229.51)

Further information on approved operating fluids is available at the following locations:

- In the Mercedes-Benz Specifications for Operating Fluids by entering the designation
 - At https://bevo.mercedes-benz.com
 - In the Mercedes-Benz BeVo app
- At a qualified specialist workshop

Notes on brake fluid

Note the instructions about operating fluids (\rightarrow page 347).

WARNING Risk of an accident due to vapor pockets forming in the brake system

The brake fluid constantly absorbs moisture from the air. This lowers the boiling point of the brake fluid. If the boiling point is too low, vapor pockets may form in the brake system when the brakes are applied hard.

This causes the braking effect to be impaired.

Have the brake fluid renewed at the specified intervals.

Have the brake fluid replaced regularly at a qualified specialist workshop.

Only use a brake fluid approved by Mercedes-Benz according to MB-Freigabe or MB-Approval 331.0.

Coolant

Notes on coolant

Observe the notes on operating fluids (\rightarrow page 347).

WARNING Risk of fire- and injury from antifreeze

If antifreeze comes into contact with hot component parts in the engine compartment, it may ignite.

- Allow the drive system to cool down before you add antifreeze.
- Make sure that no antifreeze spills out next to the filler opening.
- Thoroughly clean the antifreeze from component parts before starting the vehicle.

I NOTE Damage caused by incorrect coolant

Only use coolant that has been premixed with the required antifreeze protection.

Information on coolant is available at the following locations:

- In the Mercedes-Benz Specification for Operating Fluids 320.1
 - At https://bevo.mercedes-benz.com
 - In the Mercedes-Benz BeVo app
- At a qualified specialist workshop
- **!** NOTE Overheating at high outside temperatures

If an inappropriate coolant is used, the engine cooling system is not sufficiently protected against overheating and corrosion at high outside temperatures.

 Only use coolant approved by Mercedes-Benz. Observe the instructions in the Mercedes-Benz Specifications for Operating Fluids 320.1.

Have the coolant regularly replaced at a qualified specialist workshop.

Proportion of antifreeze concentrate in the engine cooling system:

- A minimum of 50% (antifreeze protection down to about -35°F (-37°C))
- A maximum of 55% (antifreeze protection down to -49°F (-45°C))

Coolant capacity

Coolant (engine)

Model	Capacity
All models	18.4 US qt (17.4 liters)

Notes on windshield washer fluid

Observe the notes on operating fluids (\rightarrow page 347).

WARNING Risk of fire and injury from windshield washer concentrate

Windshield washer concentrate is highly flammable. If it comes into contact with hot components, it may ignite.

- Make sure that windshield washer concentrate is not spilled near to the filler opening.
- **!** NOTE Damage to the exterior lighting due to unsuitable windshield washer fluid

Unsuitable windshield washer fluid may damage the plastic surface of the exterior lighting.

- Only use windshield washer fluid which is also suitable for use on plastic surfaces, e.g. MB SummerFit or MB WinterFit.
- **NOTE** Blocked spray nozzles caused by mixing windshield washer fluids
- Do not mix MB SummerFit and MB WinterFit with other windshield washer fluids.

Do not use distilled or de-ionized water. Otherwise, the fill level sensor may be triggered erroneously.

Recommended windshield washer fluid:

- Above freezing point: e.g. MB SummerFit
- Below freezing point: e.g. MB WinterFit

For the correct mixing ratio, refer to the information on the antifreeze container.

Mix washer fluid with windshield washer fluid all year round.

Refrigerant

Notes on refrigerant

Observe the notes on operating fluids $(\rightarrow page 347)$.

! NOTE Damage due to incorrect refrigerant

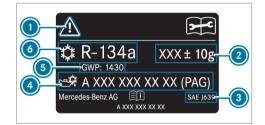

If a non-approved refrigerant is used, the climate control system may be damaged.

- **USA:** use only R-134a refrigerant.
- **Canada:** use only R-1234yf refrigerant.

- NOTE Damage to the climate control system due to incorrect refrigerant compressor oil
- Only use refrigerant compressor oil that has been approved by Mercedes-Benz.
- Do not mix the approved refrigerant compressor oil with a different refrigerant compressor oil.

Work on the climate control system may be carried out only by a qualified specialist workshop. All applicable regulations, as well as SAE standard J639, must be adhered to.

The information label for the climate control system regarding the refrigerant type and the refrigerant compressor oil (PAG oil) is located on the inside of the hood.

Information label (example - USA/China)

- Hazard and service warning symbols
- Refrigerant filling capacity
- ③ Applicable standards
- PAG oil part number
- GWP (global warming potential) of the refrigerant used
- Refrigerant type

Information label (example - Canada)

- Hazard and service warning symbols
- 2 Refrigerant filling capacity
- Opplicable standards
- PAG oil part number
- GWP (global warming potential) of the refrigerant used
- 6 Refrigerant type

Symbols () indicate the following:

- Possible dangers
- The need to have service work carried out at a qualified specialist workshop only

Filling capacity for refrigerant and PAG oil

Refrigerant filling capacity

Model	
All models	25.1 ± 0.4 oz (710 ± 10 g)

Filling capacity for PAG oil

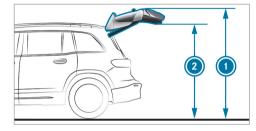

Model	PAG oil
All models	0.04 ± 0.4 oz (1 ± 10 g)

Vehicle data

Vehicle dimensions

The heights specified may vary as a result of the following factors:

- Tires
- Load
- Condition of the suspension
- Optional equipment

Height when opened and headroom

	Model	Height when opened	Head- room
	All models	83.1 in (2111 mm)	

Vehicle dimensions

All models	
Vehicle length	184.4 in (4684 mm)
Vehicle width including outside mirrors	79.5 in (2020 mm)
Vehicle width without outside mirrors	72.2 in (1834 mm)
Vehicle height	67 in (1701 mm)
Wheelbase	111.4 in (2829 mm)
Turning radius	38.4 ft (11.7 m)

Weights and loads

Bear in mind that items of optional equipment increase the curb weight and reduce the payload. Vehicle-specific weight information can be found on the vehicle identification plate.

High-voltage battery

Missing values were not available at the time of going to press.

Maximum battery capacity and charging times

All models

Model	Lithium-ion
Usable energy content	70.5 kWh
Range	
Charge time - mode 4 with approx. 100 kW charging capacity	Approx. 30 min
Charge time - mode 3 with 9.6 kW charging capacity	Approx. 7 h

Charging time – mode 3 applies to AC charging from 10% to 100% of the usable energy content.

Charging time – mode 4 applies to DC charging from 10% to 80% of the usable energy content.

The time taken to charge the battery depends on the condition of charge of the battery, the ambient temperature and the charging capacity of the battery. The charging capacity, in turn, depends on the supply voltage, the current intensity and the type of power supply.

The nominal voltage range for your vehicle can be found on the information label in the socket cover (\rightarrow page 158).

Display messages

Introduction

Notes about display messages

Display messages appear on the instrument display.

Display messages with graphic symbols are simplified in the Operator's Manual and may differ from the symbols on the instrument display. The instrument display shows high-priority display messages in red. Certain display messages are accompanied by a warning tone.

Please act in accordance with the display messages and follow the additional notes in the Operator's Manual.

For some display messages, symbols will also be shown:

- (i) Further information
- × Hide display message

With the left-hand Touch Control, you can select the respective symbol by swiping to the left or right. Pressing ① displays further information on the media display. Press the $\boxed{\times}$ symbol to hide the display message.

You can hide low-priority display messages by pressing the back button so or the left-hand Touch Control. The display messages will then be stored in the message memory.

Rectify the cause of a display message as quickly as possible.

High-priority display messages cannot be hidden. The instrument display will show these display messages permanently until the cause of the display message has been rectified.

Calling up saved display messages

On-board computer:

→ Service >> 1 Message

If there are no display messages, No Messages will appear on the instrument display.

- Scroll through the display messages by swiping upwards or downwards on the left-hand Touch Control.
- To exit the message memory: press the back button solution.

354 Display messages and warning/indicator lamps

Occupant safety

Display messages	Possible causes/consequences and > Solutions
	* The restraint system is malfunctioning (\rightarrow page 40).
	A DANGER Risk of death due to the restraint system malfunctioning
SRS Malfunction Service Required	Components in the restraint system may be activated unintentionally or not deploy as intended in an accident. In the event of an accident, the high-voltage on-board electrical system may not be deactivated as intended.
	You may receive an electric shock if you touch the damaged components of the high-voltage on-board electrical system.
	▶ Have the restraint system checked and repaired immediately at a qualified specialist workshop.
	After an accident, switch off the vehicle immediately.
	* The corresponding restraint system is malfunctioning (\rightarrow page 40).
	DANGER Risk of death due to the restraint system malfunctioning
Front Left Malfunction Service Required (example)	Components in the restraint system may be activated unintentionally or not deploy as intended in an accident. In the event of an accident, the high-voltage on-board electrical system may not be deactivated as intended.
	You may receive an electric shock if you touch the damaged components of the high-voltage on-board electrical system.
	Have the restraint system checked and repaired immediately at a qualified specialist workshop.
	► After an accident, switch off the vehicle immediately.

Display messages	Possible causes/consequences and > Solutions
	* The corresponding restraint system is malfunctioning (\rightarrow page 40).
	WARNING Risk of injury or fatal injury due to a malfunction in the window curtain airbag
Left Side Curtain Airbag Malfunction Service	The window curtain airbag might be triggered unintentionally or might not be triggered at all in the event of an accident.
Required (example)	Have the window curtain airbag checked and repaired immediately at a qualified specialist workshop.
Front Passenger Airbag Dis- abled See Operator's Man-	* The front passenger airbag has been disabled even though an adult or a person of adult build is on the front passenger seat. If additional forces are applied to the seat, the weight the system detects may be too low.
ual	WARNING Risk of injury or fatal injury due to a disabled front passenger airbag
	If the front passenger airbag is disabled, the front passenger airbag will not be deployed in the event of an accident and cannot perform its intended protective function.
	A person in the front passenger seat could then, for example, come into contact with the vehicle's interior, espe- cially if the person is sitting too close to the cockpit.
	Make sure, both before and during the journey, that the status of the front passenger airbag is correct.
	Stop the vehicle immediately in accordance with the traffic conditions.
	Make sure that no objects are trapped under the front passenger seat.
	• Check the status of automatic front passenger airbag shutoff (\rightarrow page 49).
	If necessary, consult a qualified specialist workshop immediately.

Display messages and warning/indicator lamps

Display messages	Possible causes/consequences and > Solutions
Front Passenger Airbag Enabled See Operator's Manual	 * The front passenger airbag will be enabled while the vehicle is in motion in the following situations: Even when a child, a person of smaller stature or an object weighing less than the system weight threshold is located on the front passenger seat Even when the front passenger seat is not occupied The system may detect objects or forces that are adding to the weight applied to the seat.
	WARNING Risk of injury or death when using a child restraint system while the front passenger airbag is enabled
	If you secure a child in a child restraint system on the front passenger seat and the front passenger airbag is enabled, the front passenger airbag can deploy in the event of an accident. The child could be struck by the airbag.
	 Ensure, both before and during the journey, that the status of the front passenger airbag is correct.
	NEVER use a rearward facing child restraint on a seat protected by an ACTIVE AIRBAG in front of it, DEATH or SERIOUS INJURY to the CHILD can occur.
	 Stop the vehicle immediately in accordance with the traffic conditions. Make sure that no objects are trapped under the front passenger seat.
	 Check the status of automatic front passenger airbag shutoff (→ page 49). If necessary, consult a qualified specialist workshop immediately.

Display messages	Possible causes/consequences and > Solutions
PRE-SAFE Inoperative See Operator's Manual	 * The PRE-SAFE[®] functions are malfunctioning. > Consult a qualified specialist workshop.

SmartKey

Display messages	Possible causes/consequences and > Solutions
Obtain a New Key	 * Have the SmartKey replaced. ▶ Consult a qualified specialist workshop.
Replace Key Battery	 * The SmartKey battery is discharged. ▶ Replace the battery (→ page 70).

Display messages and warning/indicator lamps

Display messages	Possible causes/consequences and > Solutions
Key Not Detected (white display message)	 * The SmartKey is currently undetected. Change the location of the SmartKey in the vehicle. If the SmartKey is still not recognized, place it in the marked space for starting with the SmartKey (→ page 146).
Key Not Detected (red dis- play message)	 * The SmartKey cannot be detected and may no longer be in the vehicle. The SmartKey is no longer in the vehicle and you switch off the vehicle: You can no longer start the vehicle. You cannot centrally lock the vehicle. Ensure that the SmartKey is in the vehicle.
	 If the SmartKey detection function has a malfunction due to a strong radio signal source: Stop the vehicle immediately in accordance with the traffic conditions. Place the SmartKey in the marked space for starting the engine with the SmartKey (→ page 146).
Don't Forget Your Key	* A warning tone will also sound. This message reminds you to take your SmartKey with you when you leave the vehicle.

Display messages	Possible causes/consequences and > Solutions
Key Being Initialized Please Wait	 * The vehicle is processing in order to teach in the new SmartKey. > Wait until processing is complete.
Place the Key in the Marked Space See Opera- tor's Manual	 * SmartKey detection is malfunctioning. Change the location of the SmartKey in the vehicle. Place the SmartKey in the marked space for starting the engine with the SmartKey (→ page 146).

Lights

Display messages	Possible causes/consequences and > Solutions
- <u>Ö</u> -	 * The corresponding light source is defective. > Drive on carefully.
Check Left Low Beam (example)	 Visit a qualified specialist workshop immediately. LED light sources: the display message for the corresponding light appears only when all the light-emitting diodes in the light are faulty.

Display messages	Possible causes/consequences and > Solutions
Malfunction See Opera- tor's Manual	 The exterior lighting is malfunctioning. Consult a qualified specialist workshop.
Automatic Headlamp Mode Inoperative	 * The light sensor for automatic driving lights is malfunctioning. > Consult a qualified specialist workshop.
Switch On Headlamps	 You are driving without low-beam headlamps. Turn the light switch to the or position.
Switch Off Lights	 You are leaving the vehicle and the lights are still switched on. Turn the light switch to the are position.

Display messages	Possible causes/consequences and ► Solutions
Adaptive Highbeam Assist Currently Unavailable See Operator's Manual	 * Adaptive Highbeam Assist is temporarily unavailable. The system limits have been reached (→ page 127). Once the cause of the problem is no longer present, the system will be available again. The Adaptive Highbeam Assist Now Available display message will appear. Drive on. Operate the high beam manually until Adaptive High Beam Assist is available again.
Adaptive Highbeam Assist Inoperative	 * Adaptive Highbeam Assist is malfunctioning. Drive on. or Stop the vehicle in accordance with the traffic conditions and restart the vehicle. If the display message does not disappear: consult a qualified specialist workshop. Until then, operate the high beam manually.
Hazard Warning Flashers Malfunctioning	 * The hazard warning lamp switch is malfunctioning. Consult a qualified specialist workshop.

Climate control

Display messages	Possible causes/consequences and > Solutions
Inoperative High-Voltage Battery Charging Not Com- plete	 * The high-voltage battery is charging. Pre-entry climate control cannot be switched on. Wait until the charging process has achieved a minimum charge.
Inoperative Charge HV Bat- tery	 * The charge of the high-voltage battery is too low. Pre-entry climate control cannot be switched on. > Charge the high-voltage battery.
Pre-entry Climate Control via Key Available Again After Engine Start	 You have attempted to switch on pre-entry climate control more than three times with the vehicle switched off. Start the vehicle for ten seconds. Pre-entry climate control is operational again.

Display messages

Pre-entry Climate Control via Key Inoperative Highvoltage Battery Low

Possible causes/consequences and > Solutions

* The charge of the high-voltage battery is too low. Pre-entry climate control cannot be switched on.

Charge the high-voltage battery.

When the high-voltage battery is sufficiently charged, pre-entry climate control will be operational again.

Drive system

Display messages	Possible causes/consequences and > Solutions
Performance Extremely	 * A malfunction has occurred in the high-voltage battery.
Limited	Output and range are severely restricted. Switch the vehicle off and lock it. After waiting for a short time, unlock the vehicle and start it again. If the display message appears again: Drive on carefully. Fully charge the high-voltage battery (→ page 158). If the output and range are still reduced, there is a malfunction in the drive system.

Display messages	Possible causes/consequences and > Solutions
	 Drive on carefully. Consult a qualified specialist workshop.
Towing Not Permitted See Operator's Manual	* The drive system is malfunctioning. \blacktriangleright Have the vehicle transported only using a transporter or trailer (\rightarrow page 305).
Acoustic Presence Indica- tor Inoperative	 * The sound generator (acoustic vehicle warning system) is malfunctioning. No driving noises are being produced. The vehicle may not be heard by other road users. > Drive with particular care. > Visit a qualified specialist workshop.
To switch engine off, press and hold Start/Stop but- ton for at least 3 seconds or press 3 times.	 You have pressed the start/stop button while the vehicle is in motion. To switch off the drive system while the vehicle is in motion (→ page 146).

Display messages	Possible causes/consequences and > Solutions
T	* The coolant level is too low.
l	NOTE Damage to the drive system due to insufficient coolant
Check Coolant Level See Operator's Manual	Avoid long journeys with insufficient coolant.
	Have the cooling system of the drive system checked at a qualified specialist workshop.
L L L	* The coolant is too hot.
	Stop the vehicle immediately in accordance with the traffic conditions and switch off the drive system.
Coolant Too Hot Stop Vehi-	WARNING Risk of injury due to overheated vehicle
cle Turn Engine Off	If you open the hood in the event of an overheated vehicle or fire in the engine compartment, the following situa- tions may occur:
	You may come into contact with hot gases.
	You may come into contact with other escaping hot operating fluids.
	In the event of overheating or fire in the engine compartment, keep the hood closed and call the fire service.
	Allow the overheated vehicle to cool down first if you need to open the hood.
	Wait until the drive system has cooled down.
	Make sure that the air supply to the vehicle radiator is not obstructed.
	Avoiding high loads on the drive system, drive to the nearest qualified specialist workshop.

Display messages	Possible causes/consequences and > Solutions
	 * The cooling system has detected a component malfunction. Nooiding high loads on the drive system, drive to the nearest qualified specialist workshop.
Charger Cable Connected	 You cannot pull away while the charging cable is connected. Disconnect the charging cable from the vehicle.
Not Possible to Unlock Charger Cable See Opera- tor's Manual	 * The charging cable connector cannot be removed from the charging station's socket. Press the EMERGENCY OFF switch on the charging station. If the charging cable connector cannot be removed after that: Request service personnel from the operator of the charging station via the emergency call button attached to the charging station or the emergency call numbers.
Vehicle Currently Not Being Charged Charging Station Fault	 * A malfunction has occurred in the charging station or the RFID card is not recognized. Start the charging process at a different charging station. or Have the RFID card checked to ensure it is functioning.

Display messages	Possible causes/consequences and > Solutions
Charging Mode Currently Unavailable Try Again or Change Charging Mode	 * A temporary malfunction has occurred in the charging station. Wait until the malfunction has passed. or Start the charging process at a different charging station.
Charging Fault Change Charging Mode See Opera- tor's Manual	 A temporary malfunction has occurred in the charging station. Wait until the malfunction has passed. or Start the charging process at a different charging station.
AC Charging Inoperative Service Required	 * The charging process cannot be started due to a malfunction. > Visit a qualified specialist workshop.
DC Charging Inoperative Service Required	 * The charging process cannot be started due to a malfunction. > Visit a qualified specialist workshop.
Reduced Drive System Per- formance See Operator's Manual	 * The drive system is outside the normal operating temperature range, e.g. due to extremely low or high outside temperatures. Drive system power output is reduced. The yellow set reduced power output warning lamp is lit. Once the operating temperature of the drive system returns to normal (e.g. after a short trip), the full output will be available again. The display message and the yellow set reduced power output warning lamp will go out. Drive on carefully.

Display messages	Possible causes/consequences and > Solutions
	 * The high-voltage battery is not charged sufficiently. Drive system power output is reduced. The yellow reduced power output warning lamp is lit. Drive on carefully. Charge the high-voltage battery immediately. * If the drive system power output is still reduced, there is a malfunction in the drive system. Drive on carefully. Visit a qualified specialist workshop.
Stop Immediately Drive will be deactivated. Charge High-volt. Battery	 * The charge level of the high-voltage battery is so low that it is no longer possible to drive the vehicle. The drive system can no longer be restarted. When the drive system is restarted, the message Stop Immediately Drive will be deactivated. Charge High-volt. Battery will appear again. > Stop the vehicle immediately in accordance with the traffic conditions. > Charge the high-voltage battery (→ page 158).
Please Wait. Battery Not Yet at Operating Tempera- ture. Starting the Electric Motor Not Possible.	 * Operational readiness is established READY and the transmission position P is engaged. The high-voltage battery is warmed up to the operating temperature. This process can take a few minutes and may be prolonged if defrosting of the windshield readware is activated. The heating process ends when transmission position D is engaged. However, when driving, the output is significantly limited until the high-voltage battery has reached its operating temperature.

Display messages	Possible causes/consequences and > Solutions
Battery Overheated Stop, Everyone Get Out Out- doors if Possible	 * The high-voltage battery has overheated. There is a risk of fire. Stop the vehicle immediately in accordance with the traffic conditions. If possible, stop the vehicle in the open air and ensure that all vehicle occupants get out. i Supporting vehicle functions may activate automatically, e.g. the air-recirculation mode as part of climate control. Do not continue driving. If smoke is present, leave the danger zone and call the fire service immediately. Consult a qualified specialist workshop even if there are no external signs of a fire.
Malfunction	 * The drive system is malfunctioning. A warning tone will also sound. Consult a qualified specialist workshop. * There is a serious malfunction if the display message and warning tone are repeated at short intervals. You must stop the vehicle immediately in accordance with the traffic conditions because the drive system is automatically deactivated. Stop the vehicle immediately in accordance with the traffic conditions. Switch off the vehicle and consult a qualified specialist workshop.
Malfunction Service Required	 * The drive system is malfunctioning. ▶ Visit a qualified specialist workshop.

Display messages	Possible causes/consequences and > Solutions
Engine will not restart Service required	 * It is not possible to restart the drive system due to a malfunction. Do not switch off the drive system; drive on to the nearest qualified specialist workshop.
Reserve Level Charge High- Voltage Battery	 * The charge level of the high-voltage battery has dropped into the reserve range. ▶ Charge the high-voltage battery (→ page 158).
12 V Battery See Opera- tor's Manual	 * The drive system is off and the condition of charge of the 12 V battery is too low. > Switch off electrical consumers that are not required. > Drive the vehicle for 30-60 minutes. or > Charge the vehicle at a charging station (→ page 158). If the message appears while the vehicle is switched on, this indicates an on-board electrical system malfunction. > Visit a qualified specialist workshop.
Malfunction	 * The drive system is malfunctioning. The output of your vehicle is restricted. Visit a qualified specialist workshop.

Display messages	Possible causes/consequences and > Solutions
Stop Switch Engine Off	 * The drive system is malfunctioning. Stop the vehicle immediately in accordance with the traffic conditions and switch off the drive system. Do not continue driving. Do not tow the vehicle, stop towing if necessary. Consult a qualified specialist workshop.
Malfunction Visit Workshop	 * The drive system is malfunctioning. > Consult a qualified specialist workshop.
High-voltage battery maint. urgently required No Start in Approx. XXX mi (yellow display message)	 * A malfunction has occurred in the high-voltage battery. It will no longer be possible to start the electric drive system after the distance displayed has been covered. ► Have the necessary maintenance work on the high-voltage battery carried out at a qualified specialist workshop.
High-voltage battery maint. urgently required. No Start in Approx. XXX mi(red dis- play message)	 * A malfunction has occurred in the high-voltage battery. It will no longer be possible to start the electric drive system after the distance displayed has been covered. Have the necessary maintenance work on the high-voltage battery carried out immediately at a qualified specialist workshop.

Display messages	Possible causes/consequences and > Solutions
High-voltage battery main- tenance urgently required. Do Not Restart And Con- sult Dealer	 * A malfunction has occurred in the high-voltage battery. It will no longer be possible to restart the drive system once it has been switched off. Do not switch off the drive system; drive on to the nearest qualified specialist workshop.

Vehicle

Display messages	Possible causes/consequences and > Solutions
Vehicle Ready to Drive Switch the Ignition Off Before Exiting	 You are leaving the vehicle in a ready-to-drive state. Get out of the vehicle, secure it against rolling away and take the SmartKey with you. If you do not leave the vehicle, switch off the electrical consumers, e.g. the seat heating. Otherwise, the 12-V battery may discharge and starting the engine may be possible only with the help of a second battery (jump start).
Head-up Display Currently Unavailable See Operator's Manual	 * The Head-up Display is temporarily unavailable. Possible causes: Malfunctions in the power supply Signal interference Stop in accordance with the traffic conditions and switch the vehicle off and on again. If the display message still appears, consult a qualified specialist workshop.

Display messages	Possible causes/consequences and > Solutions
Head-up Display Inopera-	* The Head-up Display has an internal error.
tive	Consult a qualified specialist workshop.
	* The power steering assistance is malfunctioning.
	WARNING Risk of an accident due to altered steering characteristics
Steering Malfunction	If the power assistance of the steering fails partially or completely, you will need to use more force to steer.
Increased Physical Effort	If safe steering is possible, drive on carefully.
See Operator's Manual	Visit or consult a qualified specialist workshop immediately.
	* The steering is malfunctioning. Steering capability is significantly impaired.
	WARNING Risk of accident if steering capability is impaired
Steering Malfunction Stop	If the steering does not function as intended, the vehicle's operating safety is jeopardized.
Immediately See Opera- tor's Manual	Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances.
	Consult a qualified specialist workshop.

Display messages	Possible causes/consequences and > Solutions
\sim	* The hood is open.
6-07	WARNING Risk of accident due to driving with the hood unlocked
	 The hood may open and block your view. Never release the hood when driving. Before every trip, ensure that the hood is locked.
	Stop the vehicle immediately in accordance with the traffic conditions.Close the hood.
	 * The tailgate is open. > Close the tailgate.
2nd Seat Row, Left Not Locked	 * The left-hand seat or the seat backrest in the second row of seats is not engaged. Fold the corresponding seat backrest back until it engages and push the row of seats back (→ page 97). Make sure that the seat is engaged (→ page 97).

Display messages	Possible causes/consequences and > Solutions
2nd Seat Row, Right Not Locked	 * The right-hand seat or the seat backrest in the second row of seats is not engaged. ▶ Fold the corresponding seat backrest back until it engages and push the row of seats back (→ page 97). ▶ Make sure that the seat is engaged (→ page 97).
Check Washer Fluid	 * The washer fluid level in the washer fluid reservoir has dropped below the minimum. ▶ Add washer fluid (→ page 284).
Wiper Malfunctioning	 * The windshield wipers are malfunctioning. > Restart the vehicle. If the display message still appears: > Consult a qualified specialist workshop.

Transmission

Display messages	Possible causes/consequences and > Solutions
Only Shift to 'P' when Vehi- cle is Stationary	 * It is possible to select the park position P only if the vehicle is stationary. Depress the brake pedal to stop. Shift the transmission to park position P when the vehicle is stationary.
Apply Brake to Shift from 'P'	 You have attempted to shift the transmission out of park position P and into another transmission position. Depress the brake pedal. Select transmission position D, R or neutral N.
To Deselect P or N, Depress Brake and Start Engine	 * You have attempted to shift the transmission out of park position P or neutral N and into another transmission position. Depress the brake pedal. Start the vehicle. Change the transmission position.
Apply Brake to Shift to D or R	 You have attempted to select transmission position D or R. Depress the brake pedal. Select transmission position D or R.
Apply Brake to Shift to 'R'	 You have attempted to select transmission position R. Depress the brake pedal.

Display messages	Possible causes/consequences and > Solutions
	Select transmission position R.
Driver's Door Open & Transmission Not in P Risk of Vehicle Rolling Away	 * The driver's door is not fully closed and transmission position D, R or neutral N is selected. The vehicle may roll away. Select park position P when switching off the vehicle.
N Permanently Active Risk of Rolling Away	 * While the vehicle is rolling or while you are driving, neutral N has been engaged. > Depress the brake pedal to stop. > Shift the transmission to park position P when the vehicle is stationary. > To continue driving, select transmission position D or R.
Service Required Do Not Shift Gears Visit Dealer	 * The transmission is malfunctioning. It is no longer possible to change the transmission position. If transmission position is selected, consult a qualified specialist workshop and do not change the transmission position. For all other transmission positions, park the vehicle safely. Consult a qualified specialist workshop or breakdown service.
Reversing Not Possible Service Required	 * The transmission is malfunctioning. It is not possible to select transmission position R. Consult a qualified specialist workshop.
Transmission Malfunction Stop	 * The transmission is malfunctioning. The transmission shifts to neutral N automatically. Stop the vehicle immediately in accordance with the traffic conditions.

Display messages	Possible causes/consequences and > Solutions
	Depress the brake pedal.
	Engage park position P.
	Consult a qualified specialist workshop.

Brakes

Display messages	Possible causes/consequences and > Solutions
	* The yellow 🔘 indicator lamp is lit. The electric parking brake is malfunctioning.
	To apply:
	Switch the vehicle off and switch it back on
(USA only)	> Apply the electric parking brake manually (\rightarrow page 179).
	If it is not possible to apply the electric parking brake:
	Consult a qualified specialist workshop.
(Canada only)	Where necessary, also secure the parked vehicle against rolling away.
Parking Brake See Opera- tor's Manual	* The yellow () indicator lamp and the red PARK (USA only) or () (Canada only) indicator lamp are lit. The electric parking brake is malfunctioning.
	To release:
	Switch the vehicle off and switch it back on

Display messages	Possible causes/consequences and > Solutions
	\blacktriangleright Release the electric parking brake manually (\rightarrow page 179).
	or
	Release the electric parking brake automatically (\rightarrow page 178). If it is still not possible to release the electric parking brake:
	Do not continue driving. Consult a qualified specialist workshop.
	* The yellow () indicator lamp is lit and the red PARK (USA only) or () (Canada only) indicator lamp is flashing. The electric parking brake is malfunctioning.
	The electric parking brake could not be applied or released.
	Switch the vehicle off and switch it back on
	To apply:
	Release and then apply the electric parking brake manually (\rightarrow page 179).
	To release:
	Apply and then release the electric parking brake manually.
	If the electric parking brake cannot be applied or the red PARK (USA only) or (() (Canada only) indicator lamp con tinues to flash:
	Do not continue driving. Consult a qualified specialist workshop.
	Where necessary, also secure the parked vehicle against rolling away.

Display messages	Possible causes/consequences and > Solutions
	* The yellow () indicator lamp is lit and the red PARK (USA only) or () (Canada only) indicator lamp flashes for approximately ten seconds after the electric parking brake has been applied or released. It then remains lit or goes out. The electric parking brake is malfunctioning.
	If the state of charge is too low:
	Charge the 12 V battery.
	To apply:
	Switch off the vehicle. The electric parking brake will be applied automatically.
	If you do not want the electric parking brake to be applied, e.g. at an automatic car wash or when the vehicle is being towed, leave the vehicle switched on. This does not include having the vehicle towed with the rear axle raised.
	If the electric parking brake is not applied automatically:
	Switch the vehicle off and switch it back on
	Release and then apply the electric parking brake manually (\rightarrow page 179).
	If it is still not possible to apply the electric parking brake:
	Consult a qualified specialist workshop.
	Where necessary, also secure the parked vehicle against rolling away.
	To release:

Display messages	Possible causes/consequences and > Solutions
	If the conditions for automatic release are fulfilled and the electric parking brake is not released automatically, release the electric parking brake manually (\rightarrow page 179).
	If it is still not possible to release the electric parking brake:
	Do not continue driving. Consult a qualified specialist workshop.
PARK (USA only)	 * The red PARK indicator lamp (USA only) or () indicator lamp (Canada only) is flashing. The electric parking brake is applied while you are driving: A condition for automatic release of the electric parking brake has not been fulfilled (→ page 178). You are performing emergency braking using the electric parking brake (→ page 179).
(Canada only)	 Check the conditions for automatic release of the electric parking brake. Release the electric parking brake manually.
Please Release Parking Brake	

Display messages	Possible causes/consequences and > Solutions
PARK (USA only) (USA only) (Canada only) Turn On the Ignition to Release the Parking Brake	 * The red ракк (USA only) or () (Canada only) indicator lamp is lit. You have attempted to release the electric parking brake with the vehicle switched off. > Switch on the vehicle.
(USA only) (Canada only) Check Brake Fluid Level	 * There is insufficient brake fluid in the brake fluid reservoir. MARNING Risk of an accident due to low brake fluid level If the brake fluid level is too low, the braking effect and the braking characteristics may be impaired. Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances. Consult a qualified specialist workshop. Do not add brake fluid.

Display messages	Possible causes/consequences and > Solutions
Check Brake Pads See Operator's Manual	 * The brakepads have reached the wear limit. > Consult a qualified specialist workshop.

Display messages	Possible causes/consequences and > Solutions		
Cannot Start Engine See Operator's Manual	* It is not possible to start the vehicle.A malfunction has occurred in the drive system.		
	 Switch the vehicle off and lock it. 		
	 After waiting for a short time, unlock the vehicle and start it again. If the display message appears again and the vehicle does not start, consult a qualified specialist workshop. 		

Tire pressure monitor

Display messages	Possible causes/consequences and > Solutions
Tire Press. Monitor Cur- rently Unavailable	* There is interference from a powerful radio signal source As a result, no signals from the tire pressure sensors are being received. The tire pressure monitoring system is temporarily unavailable.

Display messages	Possible causes/consequences and > Solutions
	The tire pressure monitoring system will restart automatically as soon as the cause has been rectified. Drive on.
Tire Press. Monitor Inopera- tive	* The tire pressure monitoring system is malfunctioning.
	WARNING There is a risk of an accident if the tire pressure monitoring system is malfunctioning
	The tire pressure monitoring system cannot issue a warning if there is pressure loss in one or more of the tires. Tires with insufficient tire pressure may impair the driving characteristics as well as steering and braking. Have the tire pressure monitoring system checked at a qualified specialist workshop.
Tire Pressure Monitor Inop- erative No Wheel Sensors	 * The wheels installed do not have suitable tire pressure sensors. The tire pressure monitoring system is deactivated. > Install wheels with suitable tire pressure sensors.
Wheel Sensor(s) Missing	 * There is no signal from the tire pressure sensor of one or more wheels. No pressure value is displayed for the affected tire. > Have the faulty tire pressure sensor replaced at a qualified specialist workshop.
Check Tires	* The tire pressure in one or more tires has dropped significantly. The wheel position is displayed. A warning tone will also sound.

Display messages	Possible causes/consequences and > Solutions
	WARNING Risk of an accident due to insufficient tire pressure
	• The tires can burst.
	The tires can wear excessively and/or unevenly.
	The driving characteristics as well as the steering and braking may be greatly impaired.
	You could then lose control of the vehicle.
	 Observe the recommended tire pressures.
	Adjust the tire pressure if necessary.
	Stop the vehicle in accordance with the traffic conditions.
	\blacktriangleright Check the tire pressure (\rightarrow page 315) and the tires.
(!)	 * The tire pressure is too low in at least one of the tires, or the difference in tire pressure between the individual wheels is too great. Check the tire pressure and add air, if necessary.
Please Correct Tire Pres- sure	\blacktriangleright When the tire pressure is correct, restart the tire pressure monitor (\rightarrow page 320).

Display messages	Possible causes/consequences and > Solutions			
	* The tire pressure in one or more tires has dropped suddenly. The wheel position will be displayed.			
	WARNING Risk of an accident from driving with a flat tire			
Warning Tire Malfunction	The tires can overheat and be damaged.The driving characteristics as well as the steering and braking characteristics may be greatly impaired.			
	You could then lose control of the vehicle. Do not drive with a flat tire. 			
	Do not exceed the maximum permissible driving distance in emergency mode and the maximum permissible speed with a flat MOExtended tire.			
	Observe the notes on flat tires.			
	Notes in the event of a flat tire (\rightarrow page 295).			
	Stop the vehicle in accordance with the traffic conditions.			
	Check the tires.			
Tires Overheated	* At least one tire is overheating. The affected tires are displayed in red. At temperatures close to the limit value, the tires are displayed in yellow.			
	WARNING Risk of an accident from driving with overheated tires			
	Overheated tires can burst.			

Display messages	Possible causes/consequences and > Solutions			
	Reduce speed so that the tires cool down.			
Decrease Speed	* At least one tire is overheating. The affected tires are displayed in red. At temperatures close to the limit value, the tires are displayed in yellow.			
	WARNING Risk of an accident from driving with overheated tires			
	Overheated tires can burst.			
	Reduce speed so that the tires cool down.			

Warning and indicator lamps

Overview of indicator and warning lamps

Some systems will perform a self-test when the vehicle is switched on. Some indicator and warning lamps may briefly light up or flash. This behavior is non-critical. These indicator and warning lamps indicate a malfunction only if they light up or flash after the vehicle has been started or during a journey.

Standard instrument display

Widescreen cockpit instrument display

Depending on the display setting, the positions of the indicator lamps on the instrument display may differ from the example shown.

Occupant safety

Warning/indicator lamp	Possible causes/consequences and > Solutions
	* The restraint system red warning lamp is lit while the vehicle is on. The restraint system is malfunctioning (\rightarrow page 40).
Restraint system warning	A DANGER Risk of death due to the restraint system malfunctioning
lamp	Components in the restraint system may be activated unintentionally or not deploy as intended in an accident. In the event of an accident, the high-voltage on-board electrical system may not be deactivated as intended.
	You may receive an electric shock if you touch the damaged components of the high-voltage on-board electrical system.
	Have the restraint system checked and repaired immediately at a qualified specialist workshop.
	After an accident, switch off the vehicle immediately.
	Drive on carefully.
	Note the messages on the instrument display.
	Consult a qualified specialist workshop immediately.
Seat belt warning lamp	* The red seat belt warning lamp flashes and an intermittent warning tone sounds. The driver or front passenger has not fastened his/her seat belt while the vehicle is in motion.
	Fasten your seat belt (\rightarrow page 43). There are objects on the front passenger seat.
flashes	Remove the objects from the front passenger seat.

Warning/indicator lamp	Possible causes/consequences and > Solutions
	* The red seat belt warning lamp lights up for six seconds once the vehicle has started.
	In addition, an intermittent warning tone may sound. The red seat belt warning lamp reminds the driver and front passenger to fasten their seat belts.
Seat belt warning lamp lights up	Fasten your seat belt (\rightarrow page 43).
	If you have placed objects on the front passenger seat, the red seat belt warning lamp may remain lit.

Drive system

Warning/indicator lamp	Possible causes/consequences and > Solutions
Reduced warning lamp power	 * The yellow reduced-power warning lamp is on. Drive system power output is reduced. Note the messages on the instrument display.
System error warning lamp	 * The red system error warning lamp is lit while the vehicle is in a state of operational readiness [READY]. There is a malfunction in the drive system. Note the messages on the instrument display.

Warning/indicator lamp	Possible causes/consequences and > Solutions
Electrical malfunction warn-	 * The red electrical malfunction warning lamp is lit.
ing lamp	There is a malfunction with the electrics. Note the messages on the instrument display.

Vehicle

Warning/indicator lamp	Possible causes/consequences and > Solutions
	* The red power steering warning lamp is lit while the vehicle is running. The power assistance or the steering itself is malfunctioning.
Power steering warning	WARNING Risk of accident if steering capability is impaired
lamp (red)	If the steering does not function as intended, the vehicle's operating safety is jeopardized.
	Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances.
	Consult a qualified specialist workshop.

Brakes

Warning/indicator lamp	Possible causes/consequences and > Solutions
PARK	 * The red electric parking brake indicator lamp flashes or is lit. The yellow electric parking brake indicator lamp is also lit in the event of a malfunction. Note the messages on the instrument display.
Electric parking brake indi- cator lamp (red) (USA only)	
Electric parking brake indi- cator lamp (red) (Canada only)	
The electric parking brake	
The electric parking brake (yellow) indicator lamp	

Warning/indicator lamp	Possible causes/consequences and > Solutions
RBS	*The yellow RBS warning lamp (USA only) or the yellow (() brake warning lamp (Canada only) is lit while the vehicle is running.
Recuperative Brake System warning lamp (USA only)	WARNING Risk of an accident due to a brake system malfunction
	If the brake system is malfunctioning, braking characteristics may be impaired.
	Drive on carefully.
	Have the brake system checked immediately at a qualified specialist workshop.
Brakes warning lamp (yel- low) (Canada only)	Adjust your speed and drive on carefully, leaving a suitable distance to the vehicle in front.
	If the instrument display shows a display message, observe it.
	Consult a qualified specialist workshop.

Warning/indicator lamp Possible causes/consequences and > Solutions * The red brake warning lamp is lit while the vehicle is running. BRAKE Possible causes: • The brake force boosting is malfunctioning and the braking characteristics may be affected. Brake warning lamp (USA There is insufficient brake fluid in the brake fluid reservoir. only) Note the messages on the instrument display. **WARNING** Risk of accident and injury if brake force boosting is malfunctioning Brake system warning lamp If brake force boosting is malfunctioning, increased brake pedal force may be necessary for braking. The braking characteristics may be impaired. The braking distance can increase in emergency braking situations. (Canada only) Stop in a safe location immediately. Do not continue driving. Consult a qualified specialist workshop. WARNING Risk of an accident due to low brake fluid level If the brake fluid level is too low, the braking effect and the braking characteristics may be impaired. Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances. Consult a gualified specialist workshop. Do not add brake fluid.

Driving systems

Warning/indicator lamp	Possible causes/consequences and > Solutions
Warning lamp for distance warning function	 * The red distance warning lamp lights up while the vehicle is in motion. The distance to the vehicle in front is too small for the speed selected. If there is an additional warning tone, you are approaching an obstacle at too high a speed. ▶ Be prepared to brake immediately. ▶ Increase the distance. Function of Active Brake Assist (→ page 200).
Active Brake Assist warning	 * The Active Brake Assist warning lamp is on.
lamp	Due to dirty sensors or a malfunction, the system is not available or the range of functions is restricted. Note the messages on the instrument display.
OFF	 * The Active Brake Assist warning lamp is on.
Constant Active Brake Assist warning	The system is switched off or the range of functions has been automatically restricted.
lamp	This may be the case if the driver is not wearing a seat belt or another driving system has been activated. ▶ Observe the notes on Active Brake Assist (→ page 200).

Warning/indicator lamp	Possible causes/consequences and > Solutions
(ABS)	 * The yellow ABS warning lamp is lit while the vehicle is running. ABS is malfunctioning. If an additional warning tone sounds, EBD is malfunctioning.
ABS warning lamp	 Other driving systems and driving safety systems may also be malfunctioning. Note the messages on the instrument display.
	 WARNING There is a risk of skidding if EBD or ABS is malfunctioning The wheels may lock during braking. The steerability and braking characteristics are heavily impaired and the braking distance may increase. In addition, other driving safety systems are switched off. Drive on carefully. Have the brake system checked immediately at a qualified specialist workshop.
ESP [®] warning lamp flashes	 * The yellow ESP[®] warning lamp flashes while the vehicle is in motion. One or more wheels have reached their grip limit (→ page 182). ► Adapt your driving style to suit the road and weather conditions.

Warning/indicator lamp	Possible causes/consequences and > Solutions
ESP [®] warning lamp lights up	 * The yellow ESP[®] warning lamp is lit while the vehicle is running. ESP[®] is malfunctioning. Other driving systems and driving safety systems (e.g. BAS) may also be malfunctioning. Note the messages on the instrument display.
	WARNING Risk of skidding if ESP [®] is malfunctioning
	 If ESP[®] is malfunctioning, ESP[®] cannot carry out vehicle stabilization. In addition, other driving safety systems are switched off. Drive on carefully. Have ESP[®] checked at a qualified specialist workshop.
ESP [®] OFF warning lamp	 * The yellow ESP[®] OFF warning lamp is lit while the vehicle is running. ESP[®] is deactivated. Other driving systems and driving safety systems may also be inoperative.
	 WARNING Risk of skidding when driving with ESP[®] deactivated ESP[®] does not act to stabilize the vehicle. The availability of further driving safety systems is also limited. Drive on carefully. Deactivate ESP[®] only for as long as the situation requires.

Warning/indicator lamp	Possible causes/consequences and > Solutions
	 If ESP[®] cannot be activated, ESP[®] is malfunctioning. ▶ Have ESP[®] checked immediately at a qualified specialist workshop.
	\blacktriangleright Observe the notes on deactivating ESP [®] (\rightarrow page 182).

Tire pressure monitor

Warning/indicator lamp	Possible causes/consequences and > Solutions
(!)	*The yellow tire pressure monitor warning lamp (pressure loss/malfunction) flashes for approximately one minute and then remains lit. The tire pressure monitor is malfunctioning.
Tire pressure monitoring system warning lamp flashes	WARNING There is a risk of an accident if the tire pressure monitoring system is malfunctioning
	The tire pressure monitoring system cannot issue a warning if there is pressure loss in one or more of the tires. Tires with insufficient tire pressure may impair the driving characteristics as well as steering and braking. Have the tire pressure monitoring system checked at a qualified specialist workshop.

Warning/indicator lamp	Possible causes/consequences and > Solutions
(!)	* The yellow tire pressure monitoring system warning lamp (pressure loss/malfunction) is lit. The tire pressure monitoring system has detected tire pressure loss in at least one of the tires.
Tire pressure monitoring	WARNING Risk of an accident due to insufficient tire pressure
system warning lamp lights	• The tires can burst.
up	• The tires can wear excessively and/or unevenly.
	The driving characteristics as well as the steering and braking may be greatly impaired.
	You could then lose control of the vehicle.
	Observe the recommended tire pressures.
	Adjust the tire pressure if necessary.
	Stop the vehicle in accordance with the traffic conditions.
	Check the tire pressure and the tires.
